Things and actions are what they are, and the consequences of them will be what they will be; why then should we desire to be deceived?—Bishop Butler's Sermons at the Rolls.

WE are continually struck with the great disadvantage to the average American business man of his very superficial knowledge or, quite as often, fundamental ignorance of the more important principles of our constitutional law, as those principles have been and are continually applied by the Supreme Court of the United States, whether in the determination of controversies or in the interpretation of statutes. Particularly in these recent years, when the attention of Government has been more directed to industrial and commercial (i. e. business) questions than to questions of a purely political character, it is a source of perpetual anxiety and of enormous pecuniary loss to the business community as a whole that so few of its members have any landmarks by means of which they can forecast with reasonable probability what the decision of the Supreme Court will be upon any controverted matter that may be presented to it. Sometimes one is led to conclude that the man in the street thinks of every case as a case by itself, forms his own opinion about it in the light of his own interests, and is elated or depressed by the decision in proportion as it accords with his opinion thus arrived at. The conception of the Supreme Court as guided by principles, by experience gathered and matured through long generations, by conclusions never suddenly arrived at, but always having their genesis in a long succession of minds occupied with the problems of political and individual justice,—this conception seems to be alien from the thinking of the vast majority, even of able business men. Hence the running hither and thither as each important decision of the Supreme Court is awaited; hence the wagging of heads after it has been announced; hence the hurried buying and selling of securities and commodities; hence the inclination of the business class to assume that every decision in which the Supreme Court has found the fundamental principle to operate along the line of the interest of that class, is a victory for the rights of property, while every decision in which the principle is found to operate along some other line of interest is a blow at the structure of society and a yielding to the destructive purposes of the radicals and the enemies of secure business. One decision is not compared with another, for the purpose of ascertaining whether the divergent effects may not after all be reducible to the same principle, and therefore result from the necessity of even-handed justice; but a feeling is entertained that the propriety of each decision is really dependent upon its being favorable or immediately inimical to the interests of the class in whose hands is the general conduct and direction of the financial and economic affairs of the country.

A decidedly impressive illustration of what we have just been saying has been had within the past month in the reception given by the business community, and by that portion of the public press which reflects its opinions, to the two important decisions of the Supreme Court in railroad cases of far-reaching significance, the so-called Shreveport Rate Cases and the Intermountain Rate Cases. When the decision in the former of these cases was handed down on June 8, there was general jubilation in financial and business circles. The stock market promptly responded with an advance, and predictions were even heard of a speedy return of confidence and prosperous times. A quarrel, not openly admitted but none the less covertly carried on, between the arbitrary Railroad Commission of Texas and the Interstate Commerce Commission had seemed to hold the railroads running into and through Texas in an impossible situation. The Texas Railroad Commission was determined that such intrastate rates should be made by the roads running eastward and northeastward from the Texas distributing centres, Dallas and Houston, that it should be impossible for Shreveport, across the line in Louisiana, to have any appreciable share of the business of distributing commodities in Eastern Texas, even at points geographically much nearer to Shreveport than to the Texas cities. The Interstate Commerce Commission, acting upon complaints from Louisiana, was equally determined that Shreveport should not be cut off from doing business in territory geographically adjacent to that city. The Interstate Commerce Commission ordered the railroads running westward into Texas from Shreveport so to adjust their westbound rates that there should be no discrimination against Shreveport, as compared with Dallas and Houston. The railroads answered *non possumus*, on the ground that they were powerless to control their rates eastbound within the State of Texas, owing to the authority exercised by the Texas Railroad Commission; while their rates westbound from Shreveport had been held to be reasonable by the Interstate Commerce Commission itself. This was the Gordian knot, and the Supreme Court cut it by declaring the power of the Federal Government to be plenary as regards the control of inter-

state commerce, even to the extent of overriding the authority of a State Railroad Commission in the matter of rates purely intrastate, provided the intrastate rates imposed by the State Commission, through their collateral effects, interfered with the free course of interstate commerce. And, as has been said above, the business community as a whole, including of course the owners and managers of our railroads, hailed the decision as a permanent protection to property in railroads from the arrogant and selfish interference of a multiplicity of authorities in the various States.

When, however, the decision in the Intermountain Rate Cases was handed down on June 22, the business community was plunged in gloom, and its elation over the previous decision was speedily forgotten. For here again the Supreme Court upheld the plenary power of the Federal Government over interstate commerce, but this time in the form of a confirmation of the authority of the Interstate Commerce Commission to deal with the situation, as regards westbound rates to Rocky Mountain and Intermountain points, as it had done in its order issued in July, 1911, wherein, carrying out the provisions of Section 4 of the Act to Regulate Commerce, as enacted in June, 1910, known as the Short-Haul Clause, it had refused to allow the transcontinental railroads to continue unchanged their practice of charging rates to Intermountain points far higher than the rates charged to the Pacific Coast, and in fact equal to the rates through to the Pacific Coast plus the back-haul rates to the Intermountain points. In place of this system, due in theory to the effect of water competition upon the rates obtainable to the Coast, the Commission outlined one of its own, adopting the principle of a division of the country into zones and indicating the extent to which rates between these zones might depart from the statutory provision that the rate for a short haul must not be greater than that for a longer haul including the short haul, unless upon cause shown to the Commission. A great out-cry was raised when this order of the Commission was issued; it was generally declared to be revolutionary and destructive of the property rights of the railroads; and dire results for the entire commerce of the country were predicted. Thus the New York "Times" said of it editorially: "The fact which gives these cases [the Spokane and Reno cases, which gave rise to the order] continental importance is that they alter the costs of production and distribution. Every manufacturer must reconsider the places where he buys his materials. Every merchant must reconsider the markets to which he can get access with these rates as part of his costs. It may be doubted that any one can entirely see how and where these rates may affect trade." We ourselves, on the other hand, took a view of the matter very different from that popular in the business community [THE MARKET WORLD AND CHRONICLE, August 5, 1911, p. 163]. We held that the Interstate Commerce Commission was in general but doing what it was called upon to do under the provisions of Section 4 of the Act to Regulate Commerce, of 1910; that it was dealing with a rate situation that was theoretically and practically indefensible and that must from its very nature be impermanent; and that the readjustment of an inequitable state of things must in the long run work for the good, and not for the harm, of the country.

This latter matter, of course, the Supreme Court did not discuss, when the cases reached it; the wisdom of the legislature and of the instruments of its delegated power, the Interstate Commerce Commission, did not concern it. The power itself was what it had to pass upon, and it took exactly the same view of the power, and of the extent of it, that it took in the Shreveport Cases. The power of the Federal Government to regulate interstate commerce it is held to be plenary. This is a condition that must be faced by all who furnish the instrumentalities of interstate commerce, in so far as these are affected with a public use or interest.

It is instructive in this connection to turn back to a decision of the Supreme Court, made twenty years ago, which few will think of as having anything to do with these railroad rate decisions, but which in fact contained the first unqualified assertion of the plenary power of the Federal Government to deal with any and every incident of interstate commerce. It is a case, too, which in its time aroused the greatest enthusiasm among business men, inasmuch as it assured them a refuge from one of the greatest perils to the uninterrupted conduct of interstate commerce, the violence of dissatisfied and violent striking workmen. The case bears the title In re Debs (158 U. S. 564), but is better known as the Pullman Strike Case. The circumstances that gave rise to the case are too well remembered to require rehearsal here; but what is not so well remembered is that the principles enounced in the decision appeared to many at the time to be absolutely novel,—indeed revolutionary,—and that they were vehemently resisted by minds of great ability, among them Governor Altgeld of Illinois. Yet now these principles have become so a part of the accepted law that the Supreme Court has not even found it necessary to refer to the case in the present decisions. None the less it is worth while to quote two paragraphs from the decision in the case In re Debs, as illustrating a principle of our government which is not unilateral in its operation, but applies now here, now there, as occasion arises. The paragraphs are as follows:

"But there is no such impotency in the National Government. The entire strength of the Nation may be used to enforce in any part of the land the full and free exercise of all national powers and the security of all rights entrusted by the Constitution to its care. The strong arm of the National Government may be put forth to brush away all obstructions to the freedom of interstate commerce or the transportation of the mails. If the emergency arises, the army of the Nation, and all its militia, are at the service of the Nation to compel obedience to its laws."

"Constitutional provisions do not change, but their operation extends to new matters as the modes of business and the habits of life of the people vary with each succeeding generation. The law of the common carrier is the same to-day as when transportation on land was by coach and wagon, and on water by canal boat and sailing vessel, yet in its actual operation it touches and regulates transportation by modes then unknown, the railroad train and the steamship. Just so is it with the grant to the National Government of power over interstate commerce. The Constitution has not changed. The power is the same. But it operates to-day upon modes of interstate commerce unknown to the fathers, and it will operate with equal force upon any new modes of such commerce which the future may develop."

It is, then, the operation of the same power that protects the business community from the paralysis of its activities by reason of a strike such as Debs and his fellow con-

spirators had conceived; that checks the selfish interference with the free flow of interstate commerce by State railroad commissions; and that compels the transcontinental railroads to readjust their rates so that communities throughout a vast region may not be discriminated against and checked in their development. No business man would wish to lose the first two of these exercises of the power of the National Government; but he cannot hope to have them without the third. Is this a situation to which he cannot adapt himself? And has he reason for depression of mind because he must give as well as take?

Arthur Richmond Marsh

THE LAW OF SUPPLY AND DEMAND AND THE HIGH COST OF LIVING

To the Editor of the Market World and Chronicle:

FRIEND Editor:—A few mornings ago, "the lady of my household" graciously rode downtown with me to my office. We drove down the Eastern part of Manhattan, and what we males call "feminine curiosity" (as if there were any other kind) was aroused by those strange scenes. So going home, my lady, whom I have never known to be particularly interested in political, or any other kind of economy, stopped at some of the little shops, investigated the push-carts and made purchases, all of which I can aver, on knowledge, were of the first quality. The statistical table of prices, proper for your paper, follows:

	Uptown "Market."	Downtown Markets.
Strawberries, per box	32c	Offered at 12½c; bid wanted
Beets, per bunch	08c	03½c
Lettuce, per head	12c	03c
Turnips, per bunch	05c	02c
Carrots, per bunch	05c	03c
Tomatoes, per lb	20c	12c

You will observe that I doubt the propriety of calling the place where our uptown vendor is located, a "market," for I hold, regardless of dictionaries, that a market is a place where prices change. "Prix fixe" and "market" are in different worlds.

But downtown, there appears to be (I learn) a desire to trade, to meet the enemy,—the buyer,—half way or even further along than that, if only she will prove a buyer nad not a "shopper."

Now where, in all these facts, does our old friend, the law of supply and demand, appear? I was brought up with him, and still believe him true, but at times, I must confess, I cannot but feel that either he or I have discovered,—no, rediscovered, (for the Colonel is ahead of us both),—the River of Doubt.

I have been told by old men, responsible and even eminent citizens of this Borough, that in the days before trolley cars, it was their custom in person to buy the household supplies daily. Of course, one walked then, and many things could then be done on foot that cannot now be done in automobiles. What relation have these facts to our new acquaintance, the high cost of living? Has this newspaper headline come in at the door because common sense has flown out of the window?

"I wonder and doubt—
Is civilization a failure?
Or is the Caucasian played out?"

Answer my questions or not, as you please; but do not, for old sake's sake, prate to me of "rents," and "overhead charges." This is not intended as a serious or sensible discussion, although as I end my screed, I wonder whether many other discussions of prices and their reasons are not less sensible, even if more serious.

Yours in the Progressive Faith,

A NEW YORKER.

New York, June 30, 1914.

[In these days of the undisputed sway of the psychological, we can scarcely wonder that our esteemed correspondent is bewildered at finding that the Law of Supply and Demand is to all appearance lost, strayed or stolen in this City of New York. If we remember correctly, the phenomena he describes with perfect statistical illustration have been severely commented upon by sundry persons, more or less in the public eye, who have become alarmed over the decadence of this Nation and have desired to set our crookedness straight. It is certainly a plain sign of decay that a bunch of turnips or of carrots should cost 5 cents in any mart or market. Only legislation can remedy such an evil, and we have no doubt that effective statutes are already being evolved and revolved in the minds of many of our political leaders. At the same time, we confess to having been tempted to indulge in a little economic discussion of the matter and to have been restrained only by our correspondent's evident dislike of "rent" and "overhead charges." We shall, however, venture to ask him one question with an economic squint. We assume that he sees nothing abnormal or disturbing in paying a rent for his habitation, in the select quarter of the town in which he dwells, much in excess of the rent he would have to pay for the same accommodations on the East Side. Why should not a bunch of turnips or carrots or a quart of strawberries, situated in the same neighborhood and easily accessible to ladies who are not "particularly interested in political, or any other kind of economy," have a higher market value than they would have if situated in a neighborhood in which "ladies" have an overwhelming interest in all the kinds of economy there are? Off-hand, and speaking not according to the Progressive Faith, but in the spirit of unenthusiastic economy (political and other), we should be inclined to say that "rent" will have its way with the price of commodities at retail, quite as much as does the Law of Supply and Demand. We see no remedy for this except some adaptation of the principle of the Single Tax. Has our correspondent thought of this?—Editor.]

BRITISH RAILWAY ACCIDENTS IN 1913

A return made recently by the British Board of Trade, shows that in 1913, 1,131 persons were killed and 9,054 injured in the course of public traffic on the railways in the United Kingdom. Compared with the previous year, the fatalities increased by twenty and the cases of injury by 355. Appended are the details:

Passengers.	Killed.	Injured.
Accidents to trains, etc	33	723
Other accidents	110	2,224
Railway servants.		
Accidents to trains, etc	8	145
Other accidents	414	5,608
Other persons.		
Train accidents	...	3
At level crossings	64	46
Trespassers (including suicides)	458	132
Persons on business at stations	44	173
Totals	1,131	9,054

In addition, seven passengers, forty-one railway servants, and fifteen other persons were killed, and 694 passengers, 23,494 servants, and 554 other persons were injured on the premises of railway companies as the result of accidents in which the movement of railway vehicles was not concerned.

An Economist's Study of the History and Operation of the Single Tax in Vancouver

By Charles J. Bullock*
Professor of Economics in Harvard University

IN 1910, Vancouver achieved sudden fame as "the City of Single Tax." From various sources, but always by common inspiration, the news was published to the world that Vancouver, having never taxed personal property, had removed all taxes from buildings and other improvements on real estate, and had begun to raise her entire revenue by a single tax on land values. The effect of the change was announced by the same authorities to be magical.

In 1909, before the taxation of improvements was abolished, the buildings for which construction permits were issued were valued at $7,258,000. In 1910 these figures rose to $13,150,000; in 1911, to $17,652,000, and in 1912, to $19,388,000. Never had such prosperity visited a city. Lofty buildings were rising as if by the stroke of a wizard's wand. Population was increasing at the rate of 15 or 20 per cent a year. Prosperity was universal, and it really seemed that Vancouver had found the philosopher's stone.

After this news had been industriously circulated for a few months, the single-tax publicity agencies turned their attention to the United States. Thousands of American farmers were found to be moving across the line into Canada, and it was claimed that nothing but single tax could be attracting them there. Seattle, Portland, San Francisco, Los Angeles, and other Pacific Coast cities were reported to be rapidly losing both capital and people to their British Columbian rival, which had been wise enough to "untax" capital and industry. Campaigns for the local or State-wide adoption of the single tax were begun in Washington and Oregon, and it was reported that the policy of taxing land values was sure to be adopted by the entire Pacific Coast. Once established there, it must necessarily spread to the older and more conservative portions of the United States.

Thus for a couple of years Vancouver remained one of the best advertised cities in the world. The facts seemed to speak for themselves. Between 1909 and 1913 the population increased from 78,000 to 114,200, and the value of real estate improvements increased from $24,405,000 to $68,010,000, while the land values of the city jumped from $48,281,000 to $144,974,000. But toward the end of 1913, Vancouver suddenly disappeared from the headlines, and the campaign of publicity was directed elsewhere. No longer was the American press regaled with statistics showing the increase of building permits in Vancouver.

Reports concerning the depopulation of our Northwestern States suddenly ceased, and presently ordinary news agencies reported that the tide of migration had turned, and that thousands of Americans were coming home from Western Canada—"busted." Immediately Houston, Tex., became the centre of single-tax news, and the Houston system of "untaxing industry" replaced the stories of Vancouver's prosperity under single tax. The campaign had been a clever one in many ways, but a trifle overdone. Doubtless the "cause" had received considerable publicity; and, without doubt, Vancouver had received a valuable line of advertising for which she was, and is, duly grateful; but it is to-day a trifle awkward for the single-tax enthusiasts to have to switch their campaign so abruptly from Vancouver to Houston.

The fact is, of course, that the boom in Western Canada has come to an end, and that Vancouver, like other cities of that region, is to-day undergoing the inevitable reaction from the flush times of 1910 to 1912. With the end of the boom came also the end of the magical increase of population and business attributed to the single tax, and it is now possible to study in an unemotional manner the recent experience of Vancouver with the taxation of land values.

Vancouver is known to every one as the gateway to Western Canada, and the terminus of the Canadian Pacific Railroad. Its hinterland is a vast domain, endowed with wonderful natural resources, which, during the past twenty years, have begun to be developed. The recent boom in Western Canada had a solid basis in the rapid development of a new country blessed with great natural resources. Things were overdone, of course, as they always are, and the collapse of the boom was absolutely inevitable; but its passing leaves Western Canada what nature made it, a great country, whose future development and prosperity are assured.

Vancouver's rapid growth was the natural and inevitable result of the growth of Western Canada. Founded only in 1886, the city had 12,000 inhabitants in 1890, 24,000 in 1900, and 114,000 in 1913. In recent years the Grand Trunk, the Great Northern, and other railroads have extended their lines to Vancouver, with the result that the strategic position of the city as the natural terminus of a number of transcontinental lines has been placed beyond question. Add to the other favorable conditions the influence of the wave of speculative activity which recently spread over the whole of Western Canada, and you have the explanation of Vancouver's prosperity. Remarkable it certainly was, but no more so than similar booms in newly developing districts in the United States. Nothing has happened in Vancouver that cannot be matched in Seattle during the decade ending in 1909, or in Los Angeles to-day. In fact, the development of Los Angeles is in some ways more remarkable than that of Vancouver.

Vancouver's methods of taxation cannot be understood without considering briefly the relations of provincial and local revenues in the province of British Columbia. The Dominion of Canada, under the provisions of the British North America Act, pays annual subsidies to the various provinces, from which source British Columbia now receives $713,000, or nearly $2 per capita. The Province, in addition to this subsidy, derives large revenues from public lands, timber royalties, mineral and coal taxes, a tax upon wild lands, and fees and licenses, as well as taxes levied directly by provincial officials upon polls, real property, personal property, and incomes. From these sorces it derives a large revenue, from which it is able to make grants to the municipal governments for school purposes. Vancouver in 1913 received $167,000 from the provincial treasury, or nearly $1.50 per capita.

The municipalities, therefore, are obliged to levy taxes only for local purposes, and have no responsibility to the provincial treasury. Instead of being obliged to contribute for the support of the State Government, like an American municipality, they receive substantial subsidies from the provincial treasury, so that their general financial position is extremely favorable compared with that of the average American city.

The laws of the Province authorize municipalities to raise their revenue by the taxation of real estate within their corporate limits;

Reprinted from the New York "Evening Post," of June 27, 1914.

and the municipal taxes are the only ones to which such property is subject, because the realty tax of the Province applies only to land lying outside the incorporated municipalities. The charter of Vancouver authorizes the Council at its discretion to exempt from taxation improvements upon real estate; and, in 1895, 50 per cent of the value of such improvements was exempted. In 1906, the exemption was raised to 75 per cent, and in 1910, to 100 per cent of the value of improvements. The action taken by the city in 1910 was merely the last step in a gradual process of exempting improvements from taxation, and in actual magnitude was less important than the action taken in 1895, when the first exemption of 50 per cent was granted.

The exemption of 50 per cent of the value of improvements in 1895 exerted no magical effect upon the development and prosperity of the city. The population of Vancouver increased, but no more rapidly than that of many a "boom town" in the United States. The construction of buildings annually increased in response to the demand of the growing population, but at no more rapid rate than in many a city south of the line under the operation of the general property tax. It has in fact never been claimed that the 50 per cent exemption worked any magic. * * *

Certain it is that if the 50 per cent exemption of 1895 stimulated construction at all, it did not do so immediately. The assessed value of improvements in 1895 was $4,317,000, and in 1898 it was only $4,551,000, a smaller rate of increase than during any similar period prior to 1895. Population also increased slowly during these years, but after 1898 things took an upward turn. Between 1898 and 1905 the assessed value of improvements increased to $11,804,000, and population rose to 45,000; but this increase was not greater than can be matched in American cities under the general property tax, and it coincided not with the exemption of improvements in 1895, but with the beginning of the boom in Western Canada.

Altogether it would seem that the statistics do not show that the 50 per cent exemption after 1895 produced any considerable effect, and that if such exemption exerted any material influence, it must have been in some manner that the statistics do not disclose. As I have already said, the opinions of competent observers differ widely upon these points; but it is agreed that no spectacular developments followed the policy of partial exemption in 1895.

The exemption of an additional 25 per cent of improvement values in 1906 came at the time when the boom in Western Canada was gathering strength and Vancouver was rapidly growing in wealth and numbers. The assessed value of improvements showed a handsome increase from $11,804,000 in 1905 to $24,405,000 in 1909. The population was increasing in the interim from 45,000 to 78,900, so that the increase of buildings was not more rapid than would have been expected, and could have been matched in growing towns south of the line.

This brings us to 1910, when the last 25 per cent of the tax upon improvements was removed, and it could be said that Vancouver had adopted single tax upon land values. This was the time chosen by the single taxers for advertising to the world the magical effects of single tax in Vancouver, and the statistics of the increase of population and of building construction from 1909 to 1912, as given in an earlier paragraph, furnished plausible evidence in support of the contention. It also happened to be the very height of the boom period, and in 1913 came the collapse, about which single-tax publicity agencies have maintained discreet silence.

The year 1913 opened with building operations at their height, but by Fall new construction practically came to an end, and for the entire year the value of new building was reported at $10,423,000, as compared with $19,388,000 for 1912. During the first five months of 1914 the depression has continued, and the building permits from the first of January to the end of May aggregate but $1,820,000, indicating total operations of between four and five million dollars for the year 1914. From nineteen millions to four millions is a startling decrease. It is doubtless to be attributed to the depression that has fallen upon Western Canada. If the single tax, rather than the previous period of flush times, accounts for the increase in building operations from 1909 to 1912, it must accept the responsibility for the slump of 1913 and 1914. It is a poor kind of magic that can be used only to account for prosperity and proves useless in a season of adversity.

The present situation in Vancouver seems to be as follows: The city is gradually recovering from the wild times of 1911 and 1912. A good volume of business is being done in staple lines, and in many ways the city is better for the passing of the boom. The more substantial business men do not hesitate to say so. Vancouver's future is assured, and after the inevitable depression the city will go forward as before, and upon a safer, saner, and sounder basis. Meanwhile, however, speculation is at an end. Thousands of people have left the city, and there are said to be in Greater Vancouver not less than 3,000 empty houses.

Concerning the actual operation of the so-called Vancouver plan of taxing land values, it is still too early to say very much. The first thing that strikes an American, however, is that land values in Vancouver are not yet taxed as heavily as in the average city south of the line. The rate of taxation in the city has been only 20 mills on the dollar, and in 1914 it will increase to 22 mills. Land is supposed to be assessed at about 60 per cent of its actual value, so the actual rate probably does not exceed 14 mills on the dollar. Many an American city has a higher rate than this, and therefore can be said to tax land values more heavily than Vancouver.

The second thing to be noted is that all improvements are not actually exempt from taxation. The law defines improvements only in the most general way as including buildings and structures erected upon or affixed to the land. In practice buildings and certain other visible improvements are exempted. But not such improvements as filling, grading, and erecting retaining walls, which are necessary to make a holding as good as adjacent lots. Such improvements may secure exemption for a brief time, but before long the assessor values the improved lot at the same figure as adjacent properties, and the exemption disappears. * * *

The point of greatest interest is the financial aspects of the Vancouver plan. Until 1914, the increase of land values in Vancouver was sufficient to provide the revenue needed, without increase of the tax rate, but for 1914 the rate has been increased from twenty to twenty-two mills, and a further increase is probable. More revenue is certainly needed for improvements that must be made before many years, and the city is now considering the question of future sources of revenue.

An embarrassing factor in the situation is that arrears of taxes are becoming large, rising from $179,000 in 1910 to $570,000 in 1912, and $728,000 in 1913. For many years the city has managed to avoid tax sales, and has a strong desire to do so because such sales would be regarded as a bad advertisement for the city. It now appears that it will be necessary before long to sell land for unpaid taxes, and the effect of such action on land values in outlying districts is problematical.

Last year the proposal was made in the Council to restore the tax upon buildings, or at least to restore 25 per cent of the assessment. The occasion of the proposal was the need of providing increased facilities for fire protection, which were made necessary by the construction of high buildings. The question was raised whether it was fair to tax the owner of a vacant lot or the owner of a dwelling house to purchase a water tower with which to ex

tinguish fires in skyscrapers, and not a few of the Councilmen were disposed to answer the question in the negative. The proposal to restore a part of the tax upon buildings was defeated for the time being, but it will certainly recur. It has already received sufficient support to alarm the single-tax advocates, who are now announcing their intention to apply to the Provincial Legislature for an amendment to the city charter that will prevent the Council from returning to the taxation of improvements.

At present it is certain that public opinion is divided, and that four tendencies may be observed. First of all, there is a comparatively small body of orthodox single-taxers, who are frankly for the confiscation of land values. They probably form only an inconsiderable element in the electorate. There are, in the second place, a number of persons who call themselves single-taxers, but who understand by the single-tax nothing more than the exemption of improvements from municipal taxation. Such persons are numerous, and form a large proportion of the population, though no one knows whether they are a minority or a majority. In the third place, there are persons who take the ground that, since the city has adopted the policy of exempting improvements, it is well to test that policy fully and unwise to restore the tax upon improvements until the necessity for doing so is too clear to admit of serious question. It appears to have been this element in the Council which held the balance of power when the question came up some months ago. There are, in the fourth place, the out-and-out opponents of the Vancouver plan, who consider its practical operation to be both unjust and unfortunate.

It does not seem possible to identify any one of these four opinions with any particular class or section of the population. One of the newspapers, some eight months ago, canvassed the members of the Vancouver Board of Trade, and found them nearly equally divided upon the subject. Some of the leading members of the Manufacturers' Association are strongly opposed to the policy of exemption of improvements, since they do not desire to carry out their industries in loft buildings and prefer to erect one or two-story factories, which, of course, require a considerable area of land. Other manufacturers either favor exemption or are not disposed to oppose it.

One thing, however, is certain: confiscatory taxation of land values will find little support in Vancouver. All that has been tried is a limited form of single tax under which land has been subject to a rate of taxation actually lower than that which prevails in many American cities. Concerning the working of the so-called single-tax unlimited, by which is meant such taxation of land values as would appropriate the whole of the ground rent for the use of the Government, the experience of Vancouver furnishes no information whatever.

RAILWAY REVENUES AND EXPENSES IN APRIL

A bulletin of the Bureau of Railway Economics shows that steam roads operating 225,821 miles of line or about 90 per cent of the total mileage in the United States, returned revenues for the month of April, 1914, amounting to $230,534,172. This amount includes revenues from freight and passenger traffic, from carrying mail and express, and from miscellaneous sources connected with rail operation. Compared with April, 1913, total operating revenues show a decrease of $7,970,644. Total operating revenues per mile averaged $1,021 in April, 1914, and $1,065 in April, 1913, a decrease of $44, or 4.1 per cent. There was a decrease of 5.2 per cent in freight revenue per mile, and a decrease in passenger revenue per mile of 0.2 per cent. Operating expenses, which include all the costs of maintaining track and equipment, operating trains, securing traffic, and of administration, amounted to $172,231,630. This was $7,556,970 less than for April, 1913. These operating expenses per mile of line averaged $763 in April, 1914, and $803 in April, 1913, a decrease of $40 per mile, or 5.0 per cent. Net operating revenue, that is, total operating revenues less operating expenses, amounted to $58,302,542, which was $413,674 less than for April, 1913. Net operating revenue per mile of line averaged $258 in April, 1914, and $262 in April, 1913, a decrease of $4 per mile, or 1.5 per cent. Taxes for the month of April amounted to $11,465,060, or $51 per mile, an increase of 9.3 per cent over April, 1913. Operating income, which is net revenue from rail and auxiliary operations, less taxes, averaged $206 per mile of line, and in April, 1913, $214, thus decreasing $8, or 3.5 per cent. Operating income for each mile of line for each day in April averaged $6.88 and for April, 1913, $7.14. Operating income is that proportion of their operating receipts which remains available to the railways for rentals, interest on bonds, appropriations for betterments, improvements, new construction, and for dividends. The operating ratio for April, that is, the per cent of total operating revenues absorbed in operating expenses, was 74.7 per cent, which is comparable with 75.4 per cent in April, 1913, and 73.6 per cent in April, 1912.

GOVERNMENT REVENUES IN THE FISCAL YEAR 1913-14

A statement of the Secretary of the Treasury shows that for the fiscal year ended June 30, 1914, the total ordinary receipts of the United States Government were $734,343,700.20, and that the surplus of ordinary receipts was $33,784,452.07. Mr. McAdoo said:

"Subject to revision upon analysis of complete returns, the following is a statement of the ordinary receipts and the ordinary disbursements for the fiscal year ended June 30, 1914:

Customs		$232,128,527.33
Internal revenue, ordinary		308,613,483.73
Corporation excise and income	$43,079,819.44	
Individual income	28,306,336.69	
		71,386,156.13
Miscellaneous		62,215,172.71
(Including $3,800,000 surplus of postal revenues for the fiscal year 1913.)		
Total ordinary receipts		$734,343,700.20
Total ordinary disbursements		700,559,248.13
Surplus of ordinary receipts		33,784,452.07

"The Panama Canal payments during the year amounted to $34,826,941.76. These have been paid out of current revenues, so that the surplus for the year of $33,784,452.07 has been absorbed, leaving the sum of $1,010,058.81 as a charge against the general fund of the Treasury.

"The following is a comparative statement of the ordinary receipts and disbursements, including expenditures on the Panama Canal, for the last three fiscal years:

	1912.	1913.	1914.
Receipts	$691,778,465	$724,111,229	$734,343,700
Disbursements	654,553,963	682,770,705	700,559,248
Surplus	37,224,501	41,340,524	33,784,452
Panama Canal	35,327,370	41,741,258	34,826,941
Surplus or deficit	*1,897,131	†400,733	†1,010,058

*Indicates surplus. †Indicates deficit.

"Owing to the provision in the income tax law which gives ten days after the close of the fiscal year before penalties attach there was a failure to pay approximately $3,500,000 of taxes which had been assessed against corporations and individuals and which should have been paid before the close of the fiscal year 1914. Had this $3,500,000 been paid on or before June 30, 1914, there would have been a surplus for the fiscal year of approximately $2,500,000 against a surplus for 1912 of $1,897,000, and a deficit for 1913 of $400,000.

"The net balance in the general fund of the Treasury is now $145,835,502."

INDUSTRY, COMMERCE AND FINANCE

Commercial Failures in United States for First Half of 1914.—According to the reports of R. G. Dun and Company, the commercial failures in the United States during the first six months of 1914 were, with the single exception of 1908, the most numerous recorded for the same period in any year in the past fifteen, and in the amount of the estimated liabilities of the concerns failing, ($185,099,730), they exceeded all previous records by over $52.000,000, the next highest amount of liabilities having been experienced in the first half of 1913 ($132,909,061) and the third highest in the first half of 1908 ($124,374,833). The following table shows the number of failures, the estimated assets and the estimated liabilities of the business concerns failing, for the first half of each year since 1900:

Year.	Number.	Assets.	Liabilities.
1914	8,344	$132,393,632	$185,099,730
1913	8,163	91,123,616	132,909,061
1912	8,317	89,643,271	108,012,223
1911	7,061	65,997,792	103,638,334
1910	6,388	76,328,611	112,239,303
1909	6,831	63,146,097	88,541,373
1908	8,700	78,762,588	125,374,833
1907	5,608	42,153,278	69,568,662
1906	5,612	32,802,020	62,654,074
1905	6,210	32,262,157	55,904,585
1904	6,214	46,764,276	73,430,903
1903	5,628	35,957,751	66,737,260
1902	6,165	31,048,808	60,374,856
1901	5,759	27,635,046	55,804,690
1900	5,332	43,436,559	74,747,452

* * *

The Production of Iron Ores in France in 1913.—Figures published by "L'Économiste Français" show France to be third among the iron producing countries of the world. The production of iron ore in France, in 1913, amounted to about 21,714,000 metric tons, [2,205 pounds], being a gain of 2,500,000 tons over 1912. Exports were 9,743,863 tons, an increase of more than 1,400,000 tons over the preceding year.

According to the statistics of the French Department of Public Works, the total production of iron ores in France, during the last few years, has been as follows:

Year.	Tons.	Year.	Tons.
1907	10,008,000	1912	19,160,000
1911	16,408,000	1913*	21,714,000

*Estimated.

These figures do not include the production of Algeria and of Tunis. which was, in all, 1,476,965 tons in 1911, and 1,681,992 tons in 1912. This production is exported principally to England and Germany.

Comparisons with the production of foreign countries, says "Le Génie civil," brings out the following figures:

	Tons.		Tons.
United States (1912)	*59,485,000	Spain (1911)	8,773,691
Germany (1912)	27,199,944	Sweden (1912)	6,699,226
England (1912)	*13,790,391	Russia (1910)	5,638,000

*Tons of 2,240 pounds.

It is the Meurthe-et-Moselle basin that produces the largest part of the French ores, as appears from the table given below, which shows the production of the various iron-producing districts:

District.	1912, Tons.	1913, Tons.
Meurthe-et-Moselle	17,370,853	19,814,000
West (Normandy, Anjou and Brittany)	1,112,765	
Pyrenees	303,331	1,900,000
All others	373,453	
Totals	19,160,407	21,714,000

A large part of the French iron ore is exported; a certain amount, however, is imported, principally from Germany (845,000 tons in 1912), and from Spain (468,000 tons in 1912). The foreign commerce of France in iron ores for the last few years was as follows:

	Imports, Tons.	Exports, Tons.		Imports, Tons.	Exports, Tons
1907	2,000,000	2,147,000	1912	1,454,000	8,324,000
1911	1,351,000	6,176,000	1913	1,417,000	9,746,000

A detailed table of these exports is given below:

Exports to	1911, Tons.	1912, Tons.	1913, Tons.
Belgium	3,689,000	4,672,780	
Germany	1,851,000	2,798,353	
Netherlands	368,000	604.082	9,745,853
Great Britain	254,000	215,588	
Other countries	14,000	32,909	
Totals	6,176,000	8.323,712	

It must be remembered that most of the ore exported to The Netherlands is in reality destined for Germany, where it is received by way of the Rhine. Thus France's principal customers for iron ores are Belgium and Germany.

* * *

Secondary Metals Values.—The value of the "secondary metals," exclusive of gold, silver, platinum, and iron, recovered in the United States in 1913 was $72,845,000, according to J. M. Dunlop, of the United States Geological Survey. Even this large figure is a decrease compared with 1912, when the value was $77,396,000.

The term "secondary" is applied to metals recovered from scrap metal, sweepings, skimmings, drosses, etc., as distinguished from "primary metals," which are derived from ore, but without implication that the secondary metals are of inferior quality. The Survey figures reveal only in a partial way the vast extent of the waste-material industry, which yearly becomes greater and better organized. The value of old iron and steel re-used exceeds that of remelted brass, and the value of old rubber and paper stock amounts to many millions of dollars.

For a few purposes requiring especial purity of material it is necessary to employ primary or virgin pig metal, but as a general rule secondary metals can be used in whole or in part, and most foundries use them. Over 90 per cent of the refining and smelting of drosses and scrap metals in the United States is confined to the territory East of St. Louis and North of the Ohio River.

The amount of secondary copper (including that in brass) recovered in 1913 was 136,500 tons, being over 22 per cent of the primary copper smelted from domestic ores during the year.

The secondary lead recovered amounted to 72,834 tons, equal to nearly 17 per cent of the refined lead produced from domestic ores.

The output of secondary zinc was 79,570 tons, equal to 23 per cent of the production of primary zinc.

The recovery of secondary tin is of especial importance, for practically no domestic tin ore was smelted in the United States, and the secondary tin recovered in 1913 (14,178 tons, valued at $12,567,379) was more than 27 per cent of the tin imported during the year.

In aluminum the recoveries in 1913 amounted to 5.654 tons, valued at $2,199,480.

* * *

The Population of India.—In a general report on the census of India in 1911, says "The Insurance Observer," of London, it is stated that the provinces under British administration comprise 1.093,000 square miles, or 60.6 per cent of the 1,802,657 square miles in the Indian Empire, the balance being in the various native States. The total population in 1911 was 315.156,396, of which British territory contained 244,267,542, or 77.5 per cent, and the native States 70,888,854, or 22.5 per cent. With regard to area, it is mentioned

that the Indian Empire is equal to the whole of Europe except Russia. Burmah is about the same size as Austria-Hungary; Bombay is comparable in point of area with Spain; Madras, the Punjab, Baluchistan, the Central Provinces and Berar and Rajputana are all larger than the British Islands; the United Provinces and Bihar and Orissa than Italy; and Hyderabad and Kashmir than Great Britain, excluding Yorkshire.

The population of India exceeds that of Europe without Russia, and is considerably more than three times that of the United States of America. The United Provinces and Bengal, with the States attached to them, both have as many inhabitants as the British Islands, Bihar and Orissa as France, Bombay as Austria, and the Punjab as Spain and Portugal combined. The population of the Central Provinces and Berar approaches that of Brazil, Hyderabad and Burmah have as many inhabitants as Egypt, Central India and Rajputana as Scotland and Ireland combined, and Assam as Belgium. In the whole Empire there are, on the average, 175 persons to the square mile, or much the same as in Europe outside Russia. In British territory the number to the square mile is 228, and in the Native States 100; the former figure exceeds by thirty-four the density ratio in France, and the latter is identical with that in Spain.

* * *

India's Wheat Crop.—The official estimated wheat yield of British India for the crop year 1913-14 is 8,385,000 tons, a decrease of 1,332,000 tons from 1912-13. The Punjab has an increase of 4.4 per cent and is expected to yield 3,428,000 tons, but large decreases are reported in practically all the other wheat growing districts of India. However, compared with the average crop for five years ending 1911-12 the decrease is only 187,000 tons. India exported by sea during the fiscal year ended March 31, 1914, wheat to the extent of 1,202,205 tons, compared with 1,660,187 tons in the preceding year.

* * *

The French Olive Crop.—Mr. William Dulnay Hunter, United States Consul at Nice, writes under date of June 11, that the present outlook for the olive crop for the Spring of 1915 is, so far, encouraging. The trees have blossomed abundantly, and the young fruit is commencing to develop satisfactorily. The unusually cool and rainy weather which has prevailed all Spring and until now has been most favorable for the crop, but the ground is so moist that unless the weather becomes warmer the development of the olives will be seriously affected.

* * *

The Trade of Finland.—The Finnish press reports an increase in the foreign trade of Finland from $156,000,000 in 1912, to $173,000,000 in 1913. In the latter year the imports amounted to $96,000,000 and the exports to $77,000,000. Imports of corn were valued at $19,000,000.

* * *

The Meat Supply of London.—According to the recent report of the medical officer of health of the Port of London, 8,339,114 carcasses of frozen mutton and lamb were imported into London during 1913, of which 2,381,357 came from Australa, 5,092,054 from New Zealand, and 865,703 from South America. Only once before has the total been exceeded. From the same countries 1,996,105 quarters of beef were received, amounting to about 35 per cent of the total shipments to the whole of the United Kingdom.

* * *

The French Cotton Goods Industry.—Mr. Lucien Memminger, United States Consul at Rouen, France, writes: "By far the most important industry in the district is the manufacture of cotton goods, in which American cotton, bought at Havre and shipped thence by rail to mills, is used almost exclusively. The annual output of yarn and textiles is valued at about $44,390,000, which is the product of 70 spinning mills, with 1,400,000 spindles, 14,000 employes (output $24,125,000), sixty weaving mills with 24,000 looms, 24,000 employes (output $11.580,000), and nine print goods factories, 2,500 employes (output $8,685,000), all situated at Rouen and in its vicinity and at Evreux. A crisis occurred in this industry in 1913, which resulted in the closing of several spinning mills representing 150,000 spindles. Conditions had been bad from the previous year, trade was very inactive, prices were low, and cost of raw material was high. Stocks were low during the entire year owing to exportation, spinners of the North and of Normandy, representing 1,600,000 to 1,700,000 spindles, having in fact founded an exchange for regulating, controlling, and developing their foreign trade in yarn. Cotton weavers experienced a bad year, the stock on hand at the end of December being greater than at a similar period in the previous year, but orders were unexpectedly light and prices offered not proportional to increased costs. Printed tissues fared better than allied industries, the prevailing fashions favoring this type of textile, but sales to the colonies were small."

American Cotton Goods in Greece.—Mr. A. B. Cooke, United States Consul at Patras, writes: "A three years' effort on the part of this consulate to introduce into the consular district American cotton goods has at last resulted in the placing of a substantial order with a local wholesale importing firm. In 1911 this consulate made an exhaustive report on 'Cotton-goods Trade of Greece.' Among other things, the report stated that practically a million dollars' worth of cotton goods was consumed annually in this consular district; that American cotton goods were unknown; that importers, when asked why they did not handle the American article, stated almost without exception that they had never so much as seen samples of American-made cotton goods. The report suggested that interested firms in America might at least begin to cultivate the field by putting samples and price lists within reach of local merchants. The consulate offered to display samples in its offices and to introduce them to local dealers if the proper materials and price lists were put in its hands. Nothing tangible seems to have come of this, though some correspondence was had with American jobbers. Latterly, the consulate has interested an energetic local commission merchant in the matter. He got in touch with American exporters, and had a full line of samples forwarded to him. He reports to this office that the local merchants were astonished at the excellence and the beauty of the goods, asking him where he secured them. His samples consisted of piece goods (bleached and unbleached), ladies' dress goods, and fine shirtings. The commission merchant states that the chief obstacle in the way to the building of a brisk trade in American cotton goods is the matter of terms. At present this trade is in the hands of English, German, and Italian exporters, all of whom extend to local importers terms of 5 per cent discount and three months' credit. The American exporter has heretofore quoted 'cash against documents, New York.' It is obvious that under such a handicap in the matter of terms the American goods must find difficulty in getting a foothold on the Greek markets. The order above referred to was placed only after the American firm had agreed to quote 'cash against documents, Patras.' The interested local commission merchant states that on this latter basis he hopes to build up a good trade. He suggests that, at least at first and to get American goods known here, quotations might be made 'cash against documents, Patras,' the documents being sent through some responsible local bank."

IT is to be hoped that the Equitable Life Assurance Society will from time to time make public complete details of its experience with the new plan, just announced by it, of assisting its policyholders to keep watch and ward over their health, through periodical medical examinations provided by the society. This policy has been adopted by the Southern Life and Trust Company, of Greensboro, N. C., which has had a similar plan in operation for over a year [See p. 18]. The Equitable's larger programme involves a systematic effort to reach the half million policyholders of the society, and to get them into the habit of having themselves examined physically from time to time, so as to catch threatening troubles in their incipiency. The medical director of the Equitable, Dr. Franklin C. Wells, will have the new service under his direct supervision, and has already organized a staff of competent salaried physicians at important geographical points distributed throughout the country. Dr. Wells has himself stated the precise object in view. "We strongly advise policyholders," he has said, "to go from time to time to their own physicians and have a thorough physical examination made to determine whether or not there are any signs of physical impairment and, if so, to obtain the physician's advice as to the best course to pursue. Those who do not wish to go to their own physicians or prefer to be examined by the Equitable, will be able to avail themselves of the service now offered. It is not our purpose to offer medical treatment to the policyholders, but simply to give advice as to consulting their own physicians where the same appears necessary." Free physical examination by the society's salaried examiners will be open to all policyholders of three years' standing or more. Where resort to some one of the points where a salaried physician is stationed is not practicable, the policyholders may have a chemical kidney test made at the home office of the society. The important question now remains, in how large numbers will the policyholders of the Equitable avail themselves of the service? Further, will there be a reasonable distribution of those seeking examination throughout the whole body of policyholders, or will particular and comparatively limited classes of them use this means of keeping track of their physical condition? It may perhaps be expected a priori, that the greatest willingness will be found among those who have been insured as sub-standard risks. These already know that there is at least incipient or threatened impairment of their physical condition, and that one of the problems of their lives is to keep this impairment from becoming actually effective. Again, policyholders of advanced years will perhaps as a class have got past the hesitancy that most normal persons have about continually scrutinizing their own state of body. Both these classes of persons have a positive, rather than sub-conscious, desire to prolong their lives, and this may be expected to override any reluctance to admit the possibility of something wrong in their physical condition. But will the mass of policyholders, enjoying so far as they know normal health, accept the view that they should perpetually be anticipating trouble? The question can be answered only through actual trial of such a plan as the Equitable's. But true service of the cause of health, or life, conservation requires that the results of the trial should be made public in detail. No doubt, this is in the mind of Dr. Wells and of the officers of the Equitable.

THE report submitted on Saturday last to Chancellor Walker, of New Jersey, by the commission appointed by him, under a law enacted in 1912, by the New Jersey Legislature, for the purpose of ascertaining what portion of the surplus of the Prudential Life Insurance Company of America properly belongs to the stockholders of the company, and what further compensation they should receive in case of the mutualization of the company, is a highly interesting one. The commission itself consisted of three very experienced men, former United States Senator James Smith, Jr., former Governor John Franklin Fort, and former Assistant Postmaster General William M. Johnson. Their investigations were exhaustive, as befitted the great interests at stake. They have found that of the Prudential's surplus on December 31, 1913,—$25,645,458.62,—one-half may properly be held to belong to the stockholders. They have further found that the good-will and going value of the company, property of the stockholders, has a value of $5,000,000; and they allow an increment of value, accrued since December 31, 1913, of $351,379.58. The total vested interest of the stockholders in the assets of the company is accordingly put at $18,174,108.89. As there are 40,000 shares of stock, the resultant value of each individual share is $456. The conclusions of the commission must be accepted by Chancellor Walker, before they can become effective, and the next steps can be taken towards the mutualization of the Prudential. No doubt there will be strenuous objection from many quarters, and it will be claimed that the diversion of so great a sum of money from the policyholders of the company is unjust and contrary to public policy. This is all the more likely to be the case since a precedent will here be made which will probably much affect the mutualization of other great life insurance companies, organized as stock companies and having great accumulated surpluses,—for example, the Equitable and the Metropolitan Life. It has become popular in this country to assert that all life insurance companies, no matter how organized, are essentially mutual in character, and that there can be no accumulation of profits for the nominal stockholders. On this point, it is an interesting fact that in Germany, the country *par excellence* of mutual and social undertakings, the contrary view is generally taken. There it is asserted that the tendency of mutual life insurance associations is to extravagance in salaries and commissions; and that stock companies are fully entitled to any profits they may make, because these result from economy and efficiency, and are coincident with a lower cost of insurance.

GOVERNOR WALSH, of Massachusetts, appears to be one of the many persons in our intellectually unsettled time who suppose that the nature of a thing can be changed by changing its name. He is urging the Legislature of Massachusetts to declare that insurance is a "commodity," and hence included within the inhibitions of the anti-trust statutes of the State. It is the consensus of opinion of civilized men,—*quod semper, quod ubique, quod ab omnibus creditur*,—that insurance is not a "commodity." This opinion is embodied not only in the famous decision of the Supreme Court of the United States in the case of Paul vs. Virginia, but also in the unbroken tradition of the English, and indeed of the Roman, law. Is it not a little absurd for the Governor of a day in Massachusetts to flout this great conclusion of mankind,—and that, too, for the sake of preventing certain liability insurance companies from affording workmen's compensation insurance to Massachusetts employers on such cheap terms that competing mutual associations find it hard to maintain themselves in the field?

Reinsurance and Retrocession as Affecting and Affected by Our American Insurance System

By William Hotchkiss*
Former Superintendent of Insurance of New York

AN important question now confronting insurance supervisors is the policy which should be adopted in the laws of our States relative to the increasingly important subject of reinsurance. Bills introduced into the legislatures which met in 1914 have brought this matter to the front and seem to call for an early settlement through either uniform ruling or uniform law.

There is as yet very little statute law on the subject. In our American insurance system we have heretofore treated reinsurance as, in effect, identical with insurance. While, technically considered, the principles and practice having to do with the former are different from the principles and practice having to do with the latter, yet, in our haste to bring direct writing under close supervision, we have perhaps neglected our duty as to reinsurance writing. The purpose of my remarks is to bring before this Convention some of the more patent facts needed to a proper understanding of the subject from the viewpoint of supervision, and, from such facts, perhaps to draw a few conclusions which may be helpful both to supervising officials and to insurance men generally.

Some of our State laws contain no reference whatever to reinsurance. Few of them do much more than does New York which dismisses the subject in a single brief section—and Massachusetts—where there are but two or three sections, the most important being rather involved and difficult to understand. Generally speaking, however, reinsurance—whether practiced as incidental to its business by a direct writing company or done by a reinsurance company, per se—is, in such matters as incorporation and authorization, service of process, payment of taxes, deposits and investments, examinations, solvency and reserves, under the same regulatory provisions of the States' laws as is insurance proper. Its only distinct point of contact with substantive law seems to be in, first, the prohibition existing in many of the States against reinsurance in a non-authorized company, and, second, the requirement of other States that, if the business is ceded to—i.e., reinsured by—a non-authorized company, no credit shall be allowed to the ceding corporation either in reduction of taxes or of liabilities.

The question is now broached as to whether we should not insert in our laws provisions applicable only to reinsurance, or at least applicable solely to reinsurance companies, per se; and, if so, whether when so doing we should not in certain important matters regulate reinsurance differently than we do direct writing.

The importance of reinsurance to our American commercial civilization is as yet little appreciated. It is, however, almost a truism that reinsurance occupies much the same economic relation to insurance that insurance does to the individual. The function of insurance is to spread the losses of the individual over a large number of individuals. The function of reinsurance is to spread the risks of a single company over a number of companies. Without reinsurance, in this day of large and congested risks, only the largest of our insurance companies could either properly serve the public or safely assert their continuing solvency.

Our fire direct writing companies have since their inception [illegible] reinsured from time to time, authorized [illegible] branch of underwriting, did not become a fact in the United States until the establishment of the U. S. branch of the Munich Reinsurance Company in 1898. The great increase in our property interests since that time, in connection with the enormous congestion of values in our great commercial cities—to say nothing of the excess risks which must now frequently be assumed by life, casualty and surety companies—has made company or treaty reinsurance year by year increasingly important. Indeed, we seem to be approaching a condition which calls for the adoption by us of some policy that will make scientific reinsurance as general in the United States as it is and long has been abroad.

In the past five years, the number of authorized reinsurance companies—i. e., those which do no direct writing—has greatly increased. Thus, while there were but ten of them admitted to New York prior to 1909, there were twenty-four doing business there in 1913. Similar increases are indicated in the other States; as shown by the reports filed in January, 1914, there were doing business in Massachusetts twenty-two reinsurance companies; in New Jersey the same number; in Pennsylvania twenty-six, and a like number in New York—all but two of such companies being limited to the fire (now inclusive of the marine) field. The increase in the premium income of those authorized in New York in the fire field during the period 1909-1913 is also notable. In 1909 it was $18,340,000; in 1913 it was $38,321,000.

Aside from the figures just quoted, two facts stand out as bearing strongly upon any declared American policy that shall become a part of our laws: First, that, while the ratio of losses to premiums in authorized fire reinsurance companies was 42.7% in 1909, such ratio has increased each year and is now—the companies having more than doubled in number—58.3%; and, second, that of the twenty-six reinsurance companies authorized in New York as of January 1, 1914, but one is an American corporation.

Still another fact should perhaps be stated, viz.: That, of the twenty six companies so authorized, but one has power there to reinsure a life risk, and but one a casualty or surety risk; the twenty four others are, in effect, limited to the fire field.

It is also well known that vast amounts of reinsurance are placed either by our direct writing or by our authorized reinsurance companies at Lloyd's or in un-admitted companies—chiefly of European domicile. It is impossible, of course, to get any reliable statistics as to the premium income which thus goes abroad; but, with the large amount of reinsurance business done here by Lloyds, London, in mind, the total must be very large.

More, as throwing light on the necessity of some substantive legislation, we have—for reasons which will be somewhat suggested later—adopted certain substitutes for reinsurance which perhaps could well be dispensed with, and probably would be, were reinsurance and retrocession underwriting wisely treated by our American laws.

The surplus line practice of the important commercial States, one of these substitutes, was, when inaugurated, a necessity; but, if our laws were so framed either that a sufficient number of American reinsurance companies would be formed or a sufficient number of foreign reinsurance companies be persuaded to enter, our surplus line concession to the doctrine of authorized insurance—with all its bother to both insured and insurer—could be abandoned.

* Mr. Hotchkiss' remarks at the National Convention [illegible] at Chicago, Ill., April 15, 1914.

Another substitute is the so-called Reinsurance Bureau of New York, operated by some fifty-eight authorized direct writing fire insurance companies, which was declared, in a recent examination report of the New York Department, to be "simply a reinsurance clearing house for such business as may be submitted to it by the contributing members, and organized for the specific purpose of giving an opportunity of reinsuring excess lines in an economical and convenient manner." But the reinsurance transacted by this bureau is not scientific reinsurance in the Old World sense; and, had our policy been such as to stimulate reinsurance companies, *per se*, this bureau would have been unnecessary and the work it does could have been done by reinsurance and retrocession companies even still more economically and conveniently.

A third substitute is the so-called Excise Reinsurance Bureau; which, strictly, is not a reinsurance organism at all, but a joint general agency of the subscribing companies, whose basic purpose is the control of rates and the elimination of bad hazards in the excise field.

A fourth substitute is the now well known Workmen's Compensation Reinsurance Bureau; which, strictly, again, is not reinsurance, proper, but merely a pooling of a definite percentage of the compensation insurance premiums of certain—but not all—stock casualty companies against the single hazard of a catastrophe causing liability in excess of $25,000, and available only in the States where workmen's compensation liability, so far as a single catastrophe is concerned, is unlimited in amount. Doubtless, such bureau would never have been formed had there been a sufficient number of casualty reinsurance companies available to take this excess liability. It may perhaps be added, also, that some of the largest as well as a number of the smaller companies writing workmen's compensation insurance have either not applied for admission or not been admitted to this bureau.

Another device—which is hardly a substitute—is exchange reinsurance, practiced in life insurance and, to an extent, in other fields where the excess liability in large lines is, in effect, brokered by company agents or companies, themselves. Conditions in the life field here seem to render this method or substitute usually sufficient; but that it is cumbersome and, in effect, uneconomical will not be denied.

Now, all of these plans are of value so far as they go. But each stops much short of that complete, instantaneous and automatic spreading of liability demanded by the civilization in which we live and in the end essential to the solidity of our insurance structure. Most of them are subject to the criticism that they are operated by voluntary associations, dominated on the one hand by one or two forceful companies, and subject, on the other, to influences, both within and without, that militate against sound underwriting and absolutely equitable adjustments. None of them makes its service a business, with all that that means in service and square dealing. They are simply conveniences—temporary, it is hoped—until a sufficient number of reinsurance and retrocession companies—making a business of this necessary service—can be somehow persuaded to enter this important field.

Our American system—or, rather, want of system—of reinsurance thus involves scientific reinsurance in authorized companies, chiefly of foreign origin; scientific reinsurance in unauthorized foreign companies; and various so-called bureau and exchange substitutes—to say nothing of surplus line insurance, by means of which our dearth of scientific reinsurance facilities is, to an extent, avoided.

Strictly considered, there is necessary to the protection of a large risk, first, a direct writing company, which issues its policy covering the whole risk; second, several other companies, which will automatically assume such risk above a limit retained by the direct writing company; and, third, a goodly number of additional companies, which, in turn, will also automatically assume, in agreed upon quotas, the excess liability which is ceded to them. Thus, such a risk is so scattered among a large number of companies as to make the loss possibility of each relatively small. Thus, also, the indemnity back of a large risk becomes a pyramid of protection, and a pyramid, mark you, standing firmly on the broad base of reinsurance and retrocession companies.

For convenience, then, we may divide the insurers obligated on a large risk into (a) the direct writing company, (b) the treaty reinsurance companies—perhaps one, or may be two or three in number—and (c) the quota retrocession companies—which may number ten, or, if they cede portions of their liability to still other retrocession companies, fifteen or twenty in all.

Now, it is clear that both the function and the practice of each of these three classes of companies differ quite materially from the function and practice of each of the other classes. This is true even as between reinsurance and retrocession companies, though both are, in a popular sense, reinsurers.

Stated broadly, the insurance company gives indemnity for loss of or injury to life or property. The company writing such indemnity is interested chiefly in the risk; thus, it selects and grades according to underwriting practices, based on the physical and moral hazards. The reinsurance company, however, gives indemnity to the direct writer—i.e., to an insurance company—against loss in excess of an agreed upon limit. Assuming that the insurance company's risks have been properly selected and graded, the reinsurance company views all risks as a class, and is interested, chiefly, first, in the underwriting skill of the insurance company and, second, in the amount or limit of insurance which it—the reinsurance company—can carry on a given class. One is in close touch with the insured and evidences the agreement by a policy; the other usually knows the insured chiefly as a member of a class and evidences its contract by a treaty.

Of course, these are but generalizations. In practice, the primary reinsurer is not a little concerned as to the quality of the risk, itself. Indeed, usually such a reinsurer knows the salient facts upon which the direct writer's action on a given risk was based. But, in secondary or subsequent reinsurance—i.e., retrocession—the risk *per se*, usually vanishes from the problem and classes and limits are the only concern.

Now, it must be evident that the system of indemnity thus hurriedly and imperfectly sketched is of great value to the public. It scatters company liabilities in such a way as to conserve the solvency of all. It puts back of a large risk a huge aggregate of capital and surplus protection. It is economically necessary in communities where large risks must be assumed, and no temporary substitutes—whether by way of surplus line or bureau schemes—should be encouraged any longer than it is necessary to put into effect the more scientific, as well as more economical and certainly less troublesome, method of reinsurance by automatically acting treaties.

In two other matters, however, scientific reinsurance differs so vitally from scientific direct writing as to warn those who would recommend legislation for the regulation of reinsurance to move cautiously:

First: Reinsurance, to be of real value, must operate automatically and instantaneously. The direct writer cannot bind itself on a large risk unless it is sure that much of its liability may be instantly scattered. If obliged to broker the excess, the contingency insured against may happen before the process is complete and the subsequent loss be serious. Hence, it follows that—at least where large risks and excess lines are numerous—there must be sufficient reinsurance facilities—i.e., a goodly number of reinsurance com-

panies with which treaties may be made. Put another way, restrictive legislation limiting these treaties is plainly against the public interest.

Second: The relation between the direct writer and the primary reinsurer must be confidential to a degree. The reinsurance company often gets and can always demand the facts—name, address, moral hazard, valuation, etc.—as to each risk assumed. If compelled to broker a portion of its treaty liability such facts must be disclosed to a business competitor of the direct writer—with possible serious consequence to it in this age of competition. Hence, here also it follows that, to avoid such brokering, there must be a plenty of secondary reinsurance—that is, retrocession—companies, or the system fails. Put another way, restrictive legislation limiting the number of retrocession companies needed to complete our pyramid of indemnity is plainly against the public interest.

Reinsurance and retrocession insurance have reached a high plane of development in Europe. It is now possible there, through treaties operating automatically and without resort to brokerage of excesses, to spread the liability of an individual risk assumed by a direct writer among twenty or more companies, and at no greater expense than if the insurance was carried only by the direct writer. This should be true of the United States, where the risks needing reinsurance are larger and, in the fire field at least, the congested territories of our great cities are more ominous to insurance stability. That it is not so is due both to legislation and want of legislation in the past. The problem now is just what should, or, perhaps, rather, what can be done at this late day.

These comments lead to a consideration of three legislative proposals advanced in different States in 1914:

1. The Massachusetts bill to prohibit retrocessions to non-authorized companies.

2. The New York bill to permit reinsurance companies—unlike insurance companies—to operate in all the different fields; and

3. The New Jersey bill to prohibit reinsurance in excess of at least twice the amount of the liability retained by the direct writer.

1. The Massachusetts bill is an extreme expression of the American policy (which, considered broadly, has been more or less of a failure) that none but authorized insurance companies shall do business or share in the premiums paid for indemnity on American risks. Massachusetts—with several other States—has for some time prohibited reinsurance, *per se*, in an unauthorized company. A couple of years ago the question was raised as to whether retrocession was reinsurance within the meaning of the Massachusetts law. The Commissioner ruled that it was. The Attorney-General, however, evidently noting the difference between the two, as well as interpreting the words of the Massachusetts statute, ruled that retrocession was not reinsurance within the meaning of that statute, and that, therefore, authorized principal reinsurance companies could cede to unauthorized quota retrocession companies. The Massachusetts bill of 1914 wipes out this distinction and makes both reinsurance and retrocession in companies not authorized in Massachusetts illegal.

2. The New York law evidences an as yet slowly moving American tendency the other way. For some time, in New York, it has been possible not merely for the direct writer but also for an authorized reinsurance company to place a portion of its liability in unauthorized companies, provided it maintained the full reserve against its liability and paid the full statutory premium tax. This policy, liberal from an American standpoint, is also the law of a number of other States; in fact, the Massachusetts rule and the New York rule have long run counter to each other and created conditions which, sooner or later, must be met by a declared American policy and uniformity either in law or ruling. But the proposal of 1914 went much further. Heretofore, reinsurance companies admitted to New York had been compelled to file waivers for the United States of all powers save in the field in which they elected to do business. Thus, such companies were brought within the American rule of single field insurance. The bill of 1914, had it become a law, would have given any reinsurance company the same rights as such companies have abroad, and permitted it to reinsure life, fire, casualty, surety and other risks. When coupled with another bill advanced at the same time, the effect of which would have been to have authorized such reinsurance companies to hold the stock of—nay, control—direct writing companies, this proposal would have set in motion—indeed, perhaps actually established—the European practice of insurance corporate systems made up of principal and subsidiary companies, not unlike our important railway systems of the present day.

3. The New Jersey proposal went still in another direction, and was intended to set limits on reinsurance, irrespective of the American doctrine of authorization. Under it, a direct writer which, say, had assumed a risk in $600,000, could cede only $400,000, thus often remaining liable in a sum too large for underwriting safety. The reason for this suggestion was, frankly, that the small companies might be protected from what they asserted was the menace to them of treaty reinsurance.

The Massachusetts proposal was actively supported by the organized agents and brokers of that State, doubtless, in the belief that thereby they would keep more premiums at home and thus increase their commissions; and by the Insurance Commissioner, doubtless, in furtherance of the American policy against unauthorized insurance.

The New York proposal was supported chiefly by a Connecticut reinsurance company, said to be owned largely by one of the great foreign reinsurance companies, and which, having multi-field powers under its Connecticut charter, wished to enter other States and reinsure in all fields. It was not, however, actively supported by the direct writing companies or by the Insurance Superintendent; and was actively opposed by some companies which saw the effect of such an innovation on the American classification system. The bill did not even get out of committee.

The New Jersey proposal seemed to have little open support. It was actively opposed by the large direct writing companies and by their agents and most of the brokers. This bill also failed.

These three proposals, however, indicate the chaotic condition of American sentiment as to the great subject of reinsurance and—as nothing else in recent years—suggest the necessity of an American policy and, it is thought, such a policy as will lead ultimately to the establishment here of a scientific reinsurance and retrocession system like that abroad.

To sum up, the following conclusions seem warranted:

1. We need more—nay, we must have more—reinsurance and retrocession facilities. Such substitutes as have been devised are merely temporary concessions to conditions, which we have permitted year by year to grow more acute. The need of additional facilities of this kind in the fire field is conceded by everyone. The need of such facilities in the great new field of workmen's compensation is recognized by every student of the subject. Like needs are beginning to be felt in other and less prominent fields.

2. More reinsurance and retrocession companies are absolutely essential to the existence of our smaller direct writing companies. These now suffer in competition with their larger rivals because the large companies, with their numerous treaties, have practically a monopoly of the larger and better risks. Unless the small companies, through a considerable addition to present treaty companies, can furnish the same facilities, many of them will in the near fu-

ture be forced either to go out of business through mergers or be limited largely to the local fields in which their home offices are situated. Indeed, it may be asserted with some confidence that to our rather narrow American policy as to reinsurance are due many of the mergers and retirements from business through which the larger companies have been slowly becoming the absolute masters of insurance indemnity.

3. Rightly considered, the hostile attitude of agents and brokers to treaty reinsurance is against rather than to their interest. If it continues, there is certain to be a demand on the part of the large owners of property that our present narrow policy be reversed, and, if that demand becomes strident, the agents and brokers will be the chief sufferers. It is already in the minds of many rather doubtful whether the economic service performed by this great class of middlemen warrants its cost. Should the question become acute, it will be settled not by numbers nor yet by the selfish interest of those who stand between the insurer and the insured, but, rather, by economic need.

4. Any uniform legislation on this subject must recognize, first, that reinsurance and retrocession to be economically valuable must be automatic in operation, and, second, that there must be enough of both available to make unnecessary the brokering of excess, and thus protect direct writers from a disclosure to competing rivals of the facts as to given risks. Reinsurance companies under their treaties go blindfold into liability. They do not know even until two or three weeks after risks are placed that they are bound on such risks. Hence, if we are to have in the United States anything like the scientific European system, there must be an adequate supply of retrocession companies among which the reinsurance companies so automatically bound may scatter just as automatically the liability they have assumed.

5. Heretofore our American legislation has prevented rather than encouraged the establishment here of a scientific system for spreading liability through successive insurances. The Massachusetts rule is to a considerable extent responsible for the control of this field by foreign capital; American companies, with the needed retrocession facilities in effect denied them through such rule, are limited to the States which enforce only the broader New York rule; while the heavy requirements of all the States as to deposit capital of United States branches have made it unprofitable for the numerous foreign retrocession companies—whose cessions cannot but be limited in their aggregate and whose annual underwriting profits are correspondingly small—to seek authorization here. Ways must, therefore, be found to lift or modify these conditions, if we are to secure these facilities.

6. The experience of reinsurance companies in the American market has not been favorable during the past few years. The loss ratio has steadily mounted up. It is now above, rather than below, a figure from which a reasonable underwriting profit seems likely. The effect of this experience upon both foreign and American capital—which might otherwise be available—will be appreciated.

7. Treaty reinsurance and retrocession in the United States is now done almost wholly on foreign capital. It is an open secret that New York's only reinsurance company is controlled abroad. Likewise of Connecticut's; and likewise also of the two reinsurance companies operating respectively in the life and casualty fields. This is one of the most significant facts confronting those who seek to solve the present problem. As a corollary, new American insurance capital is at present very limited. Of course, some came out after the Armstrong investigation in the life field, but it is very precariously engaged at present; so also it has not been difficult to increase the capitalization of old and prosperous American companies, and such increase is, in most cases, profitably engaged. But the number of new American insurance corporations during the last decade—except in the life field—has been startlingly small, and a sufficient number of American reinsurance and retrocession companies to supply us with the needed facilities is apparently impossible—even should we get any at all. This field is, therefore, almost certain to remain one controlled by foreign capital, and ways must be found—if we are to have treaty reinsurance and retrocession facilities—which will persuade rather than prohibit, invite rather than just allow.

8. Equally startling and significant is the enormous amount of unauthorized insurance of American risks. This is, of course, not true of the life field, for American life insurance dominates the world. But, in spite of drastic laws intended to compel Americans to do business only with authorized insurance companies and in spite of equally drastic rulings on the part of American supervising officials, a vast amount of the American premiums in other fields of insurance goes abroad; indeed, it is perhaps not an overstatement to say that our American theory—that insurance is a commodity on which we can levy a tariff at ports of entry, and thus compel the capital of the world to pay tribute for the privilege of sharing in our market—has in its practical application largely failed. Nor does there seem to be any way to enforce that theory, save by taxing the insured who places his insurance in other than authorized companies. Any supervising official who has tried that remedy and met the unanimous protest of the business interests thus to be taxed knows that such a requirement either never would be enacted or, if enacted, that it would be quickly repealed.

9. And, finally, the present chaos between the laws of the States—as evidenced very clearly in the three important proposals in 1914 in Massachusetts, New York and New Jersey—can only be ended by some agreement between the States through the National Convention of Insurance Commissioners, either on a uniform law solely applicable to treaty reinsurance and retrocession, or by—what is very much more difficult as well as less wise—the adoption of a policy of uniform rulings that will amount to an American policy on this subject and end the present confusion.

With these conclusions in mind, I may perhaps add a few suggestions:

First: So long as we continue to believe in the classification or single field system, as distinguished from the multi-field system abroad, any uniform reinsurance law should deny to reinsurance companies multi-field powers. If we are to abandon our classification system—and there are already signs that we may—we should abandon it directly, not by indirection. Rightly or wrongly, we, Americans, have heretofore refused to permit the policyholders in one class or field to be put in jeopardy by the hazards of an entirely different class or field. More, we have prescribed different reserve requirements in each field. This from the beginning has been our theory and our practice; it is embedded in our laws. The business operations in the home offices of hundreds of companies recognize this division. Foreign multi-field companies have come to our market and—while doubtless protesting—have recognized it by establishing mono-field United States branches. This is the law of the land, not merely by statute but by insurance practice affecting home office and field, and the public, as well, and has been such for considerably more than half a century. Our American classification system cannot, therefore, be changed without great shock—shock that would unsettle the insurance business for a number of years. Nor should it be changed nor broken in upon in any legislation that may be proposed affecting reinsurance alone.

Second: In view of the conditions here summarized, any further extension of the narrow authorized-insurance rule to reinsurance and retrocession companies—to say nothing of the peculiarly unwise

New Jersey proposal of 1914—is not in the interest of our American public, in that such rule tends to decrease rather than increase the supply of much needed insurance facilities, and makes evasions—perhaps violation—of law both by our citizens and by their insurers not only likely but necessary.

Third: That we should adopt a more liberal treatment of the problem—having in mind that the rule of authorized insurance is not so much an expression of sovereignty as a means to protect our citizens—and that, therefore, when the retention of the full reserve by an authorized company under American supervision has been accomplished, we can, in view of the conditions which confront us, well put aside our rather straight laced notions of sovereignty and, so doing, get this much needed service for our people.

Fourth: That the whole subject be taken up at an early day and, after an investigation covering both American conditions and European practices, there be blocked out a uniform law regulating reinsurance and retrocession; and

Fifth: That, meanwhile, legislation on this important subject and rulings or action affecting it or further committing any State to its present or to some other policy be, so far as possible, avoided.

LIFE, INDUSTRIAL AND ACCIDENT INSURANCE IN NEW ZEALAND IN 1912

ORDINARY life insurance business in New Zealand was prosperous in 1912, according to somewhat belated statistics, issued by the New Zealand authorities and summarized by the "Australasian Insurance and Banking Record." An unusually large amount of new assurances was written, while discontinuances showed only a small increase, the result being that a substantial sum was added to the total amount at risk, raising it to over £37,000,000. Industrial business, as usual, was not of large proportions, and the percentage of discontinuances was high. An ordinary life policy is generally preferred to an industrial policy by workers in settled positions in New Zealand. The accident business of 1912 showed a large increase, and a substantial surplus accrued on the operations.

The following tables give the consolidated figures for the business of all the companies and institutions operating in New Zealand.

I.—Ordinary Life Insurance Business.

Particulars of policies issued and policies discontinued during 1912 as compared with the two previous years are stated as follows:

	1910.	1911.	1912.
Number of policies issued*	14,532	16,029	16,587
Number of policies discontinued*	10,532	9,861	10,160
Increase in number of policies in force	4,000	6,138	6,427
Amount of new insurance written	£3,491,739	£3,821,193	£4,203,766
Amount of new insurance discontinued	2,293,001	2,314,183	2,364,590
Net addition to total amount at risk	1,198,738	1,507,205	1,839,176

*Including policies transferred to and from the colony.

The discontinuances for the last three years are stated, in amounts, under the various causes as follows:

Discontinuances.	1910.	1911.	1912.
By death	£268,870	£273,500	£274,816
By maturity	185,267	224,411	278,382
By surrender	527,726	647,602	612,325
By lapse	1,179,230	1,046,350	1,077,420
By other causes (transfer to Australia, etc.)	131,903	122,325	121,634

Ignoring the last item, the proportions of total discontinuances for the three years are as follows:

	Per Cent.		Per Cent.
Death	12.39	Surrender	27.10
Maturity	10.43	Lapse	50.08

That one-half of the discontinuances is due to lapsing can hardly be considered as satisfactory.

The New Zealand Government Life Insurance Department accomplished a net gain in insurance in force of £350,805 for 1912, against £153,861 for 1911. The Australian Mutual Provident Society showed gains in its New Zealand business of £764,525 and £509,730 for the two years, respectively.

The average amount of insurance per policy and the average rate of premium of the new business for the three years are stated as follows:

	1910.	1911.	1912.
Average amount per policy	£240	£238	£253
Average rate of premium, per cent.	£3 3 11	£3 3 1½	£3 0 6

A considerable increase in the average amount of insurance per policy was accompanied in 1912 by a rather notable decrease in the average rate of premium.

Some particulars of the business in force at the end of each year are as follows:

	1910.	1911.	1912.
Number of policies	137,514	143,652	150,079
Amount	£33,816,736	£35,323,742	£37,162,918
Annual premiums	1,073,010	1,116,772	1,164,699
Average amount of policy	246	243	247
Average rate of premium, per cent.	£3 3 5½	£3 3 2½	£3 2 8

The Australian Mutual Provident Society now stands first for amount, exceeding the total of the Government Department by £644,763. The two offices together hold very nearly two-thirds of the total amount of the New Zealand ordinary life insurance business.

We now arrive at the revenue and expenditure accounts, and in the first place summarize the income as follows:

Income.	1910.	1911.	1912.
New premiums	£108,339	£113,497	£124,954
Renewal premiums	945,897	988,823	1,033,305
Consideration for annuities	26,305	34,748	33,454
Interest	518,505	542,383	564,355
Other receipts	577	119	115
	£1,599,623	£1,679,576	£1,756,183
Transfers from head office and branches	82,738	240,563	104,071
Totals	£1,682,361	£1,920,139	£1,860,254

The outgo for the three years is summarized in the following table:

Claims:	1910.	1911.	1912.
By death	£360,740	£374,748	£380,424
By maturity	225,581	263,329	314,505
Annuities	28,206	30,407	31,986
Surrenders	136,625	170,123	155,302
Cash bonuses	12,064	20,687	23,291
Expenses of management:			
New commission	60,353	65,210	71,377
Renewal commission	10,922	10,271	9,339
Other expenses	95,092	101,597	103,392
Taxes	31,266	33,809	35,492
Depreciation in investments and securities	264	33,027	2,509
Other payments	85	9	126
	£961,198	£1,103,297	£1,127,743
Transfers to head office and branches	259,021	405,193	275,602
Totals	£1,220,219	£1,505,490	£1,403,345

Total expenses, including taxes, but not depreciation, compare with the total income as follows:

	1910.	1911.	1912.
Total income	£1,599,623	£1,679,579	£1,756,183
Expenses—Amount	197,633	210,887	219,600
Per cent	12.36	12.56	12.51

II.—Industrial Business.

Five offices conduct industrial life insurance business in New Zealand. The following is a comparison of the total new business and discontinuances for 1912 with those for the two previous years:

	1910.	1911.	1912.
Amount of new policies issued	£754,331	£811,945	£908,678
Amount discontinued	512,523	533,626	637,517
Net gain	£241,808	£278,319	£271,161

The revenue and expenditure accounts are summarized as follows:

Revenue.	1910.	1911.	1912.
Premiums	£84,382	£101,217	£120,116
Interest	4,414	4,907	5,308
Other revenue	†5,177	1,126	1,481
Totals	£93,973	£107,250	£126,905
Expenditure.			
Claims paid	£14,358	£14,143	£15,219
Surrenders	1,581	1,515	2,023
Expenses*	44,121	56,938	61,609
Other payments	833	1,103	1,159
Totals	£60,893	£73,704	£80,010
Excess of revenue	£33,080	£33,546	£46,895

*Including taxes and depreciation in investments and securities.
†Including advances from ordinary department of the Colonial Mutual Life Assurance Society.

III.—Accident Business.

The revenue and expenditure account for the last three years is summarized as follows:

Income.	1910.	1911.	1912.
Premiums	£241,507	£265,858	£321,803
Other receipts	3,714	6,615	4,898
Totals	£245,221	£272,473	£326,701
Outgo.			
Claims	£115,989	£133,029	£146,137
Commission	32,631	34,677	43,091
Salaries	28,782	30,009	31,635
Other expenses of management	26,013	27,163	30,772
Other payments	968	3,332	2,423
Totals	£204,383	£228,210	£254,058
Surplus income	40,838	44,263	72,643

METROPOLITAN LIFE INSURES ITS EMPLOYES

FOLLOWING closely on the dedication of a sanitorium where its employes are to be cared for in the event of tuberculosis, the Metropolitan Life Insurance Company of New York York has announced a plan of co-operative disability insurance coupled with free life insurance which became effectual on July 1. A letter "To the Clerical Staff at the Home Office" and signed by Mr. Haley Fiske as vice-president, says:

"On July 1, 1914, new plans for the benefit of the home office force will be adopted, under the first of which every home office clerk not over sixty years old and not protected under the Workmen's Compensation Act, will, as a matter of contract and not of grace, be entitled to a weekly income in the event of incapacity due to illness or accident. No medical examination will be required, but in event of incapacity the company will examine and will require proof of incapacity as often as it may deem necessary. All home office clerks—men and women—are eligible if salary is under $2,500 a year. The weekly benefit on account of incapacity will be two-thirds of the average weekly salary for the preceding six months taken to the nearest dollar. No benefit is payable for the first seven days of incapacity, or for the first thirteen weeks of insurance. The benefits are divided into three periods: During the first period of twenty-six weeks, full benefit will be paid; during the second period, four years and six months, one-half benefit will be paid; during the third period, running to age 65, one-quarter benefit will be paid.

"The company will pay one-half of the premium on the disability insurance on men employes, and on women employes the difference between the printed rates and the sum to be paid by the men for similar amount of benefit.

"As an example of the practical working of this new plan, we will take the case of an employe whose average weekly salary for the preceding six months has been $15.00. The amount of life insurance would be fifty-two times $15.00, or $780. The disability benefit would be $10.00 a week, payable for twenty-six weeks; $5.00 a week, payable for the succeeding 234 weeks; then $2.50 a week up to age 65. The cost to the employe for this protection (including life insurance mentioned below for which the company pays the entire premium) at ages sixteen to thirty will be thirty-five cents a month; one-half of the actual premium for men on the disability insurance alone. The premiums are based on age nearest birthday. In the case cited, when the employe reached age thirty-one the monthly cost would be forty cents.

"The company reserves the right to cancel the insurance herein provided for at any time, and also reserves the right to settle any question in dispute. In the event of the cancellation of the insurance of any clerk through the non-payment of premiums or otherwise, no further benefits will be paid such clerk whether incapacitated or not.

"The second plan is one whereby every member of the home office force whose income is less than $2,500 per year will have life insurance for a sum equal to one year's salary, payable in twelve equal monthly instalments. The company will pay the entire premiums. Applications under this plan should be forwarded to the intermediate branch. No medical examination will be required. This offer is open only to those who accept the offer of disability insurance above outlined.

"This is the most liberal proposition, so far as we are aware, ever offered by any corporation to its employes and will, we trust, be promptly availed of by every employe eligible therefor. The division in charge of the disability insurance, which is to be extended to general public operation, will be called the disability insurance division. The officer in charge of this new work will be the sixth vice-president, who will pay especial attention to field work. The home office force and work will be in charge of Assistant Secretary Thornton R. Richardson, and under the supervision of the third vice-president, who already has such supervision in the ordinary and industrial departments."

* * *

Infant Mortality in New York City.—Of all the various activities of the Department of Health, says a bulletin of the Department of Health of the City of New York, none has been productive of more gratifying results than the campaign directed against infant mortality. In 1904, of every 1,000 infants born in New York City, 162 died in the first year of life, while last year the rate was only 102. With approximately 135,000 births in 1913, this represents over 8,000 infant lives saved last year. The showing is still more striking when only the deaths from diarrhoeal disease are considered, for here the rate has fallen from 47 per 1,000 births to less than 23. Without depreciating in any way the influence of a better milk supply, it is safe to say that a very large share of this marked reduction in infant mortality must be credited to popular education in infant hygiene.

NOTES ON INSURANCE, AMERICAN AND FOREIGN

New York Compensation Law in Effect.—The New York workmen's compensation law came into effect on Wednesday (July 1) of this week. Various estimates have been made of the volume of insurance issued and the amount of premiums, but they cannot be better than guesses until there has been time for an exact compilation of the items. The notable development in connection with the law's coming into effect was the announcement that the State commission had discovered a basic error in computation, the correction of which would work a material reduction in the rates of premiums. This was scouted by the insurance companies and made the subject of a formal denial by the State Insurance Department.

A statement issued by the Superintendent of Insurance shows that thirty-two stock insurance companies and fifteen mutual companies, in addition to the State Fund, were authorized to write workmen's compensation insurance when the law came into effect on July 1.

As showing how the premiums are arrived at the case of the Standard Oil Company is interesting. A circular ruling covering this risk was issued by the classification committee of the inspection rating board as approved by the State Insurance Department as follows:

"*Standard Oil Company of New York.*—The department has approved the decision of the classification committee of the compensation inspection rating board with regard to the classification of this risk upon the basis of divided payroll following:

	Estimated Payroll.	Rate.	Estimated Advance Premium.
Drivers and helpers	$370,000	$2.20	$8,140.00
Chauffeurs	35,000	2.43	850.50
Oil distributing	195,000	1.62	3,159.00
Oil refining	2,060,000	3.24	66,744.00
Box manufacturing (wood) (with machinery)	53,000	3.73	1,976.90
Grease manufactures	53,000	1.46	773.80
Candle manufactures	45,000	1.46	657.00
Office force at plants	610,000	.10	610.00
Office force at 26 Broadway	727,000	.10	727.00
Totals	$4,148,000		$83,638.20

"As to clerical office force at 26 Broadway, the rate of 10 cents as shown contemplates obligating the insurance company to pay compensation to any employe of the offices at 26 Broadway on the scale of the New York workmen's compensation law. If desired, this item of clerical office force at 26 Broadway may be written at a rate of 5 cents, reducing the premium on that item one-half, and at this rate the company carrying the risk would be obligated to pay compensation only when such compensation is payable under the law, otherwise to treat the case as coming under employers' liability.

EMPIRE YARD AND VESSELS.

	Estimated Payroll.	Rate.	Estimated Advance Premium.
Ship or boat builders	$105,000	$6.48	$6,804.00
Harbor and coast tugs	140,000	5.67	7,938.00
Harbor and coast steamers	170,000	5.67	9,639.00
Coast barges	60,000	10.53	6,318.00
Harbor barges	190,000	4.86	9,234.00
Totals	$665,000		$39,933.00

"Including all payroll in the State, manufacturing, distributing, office force, yard and vessels contained in both of the above schedules, the average rate for the entire risk figures $2.56—plus."

Individual claims for compensation will be made through the Bureau of Claims of the Workmen's Compensation Commission. As to methods adopted for the adjustment of claims, Mr. Daniel A. Golden, chief of the Bureau, made the following explanation:

"The Bureau of Claims has furnished to all the insurance companies and to the mutuals, and to all of those firms or corporations who are being permitted to carry their own insurance, and to all those who have insured in the State Fund, the necessary blanks upon which to report injuries that occur after midnight of June 30, 1914.

"As soon as such notice of injury is received the Bureau of Claims will examine it to ascertain and determine whether the injured workman was, according to his notice, injured in the course of his employment, and whether his employment was one which comes under the operation of the compensation law, and the probable duration of his injury.

"If it appears that his injury will last for a period longer than two weeks, he is supplied with a blank to be filled out by his attending physician, indicating the nature and extent of his injury, after an examination by said attending physician; also a blank upon which to make his claim for compensation. Upon receipt of the claim for compensation his case will be set for a hearing, and those interested in his case, such as his employer, his employer's insurance carrier, and the injured workman himself, will be notified of the date upon which the hearing will be held.

"They may be represented by counsel, or they need not appear at all, but their failure to appear will be taken as an indication by the commission that there is no objection to the manner in which the commission has indicated that it will dispose of the claim.

"In the case of deaths some additional proof will be required, and an investigation will be made by a representative of the bureau in person, at and about the scene of the accident, as the commission is equipped with Deputy Commissioners and has branch offices located at various points throughout the State.

"Immediately upon the granting of an award a check in payment of said award will be sent to the injured workman. There will be no delay on this. All payments of compensations extending over a long period will be made bi-weekly; for instance, in the case of a man who has lost a leg or arm or foot or hand."

* * *

Free Physical Examination of Policyholders.—A statement issued by the Southern Life and Trust Company of Greensboro, N. C., affords probably the first record in this country of the experience of a life insurance company in furnishing free physical examination for its policyholders. The plan was inaugurated in June, 1913, and, therefore, has been in operation one year. After some general comment which includes an explanation that the examinations have cost approximately $2.50 each, the statement thus summarizes the "findings of the year":

"Those who were found to be in first class physical condition constituted 27.03 per cent.

"Those who had some slight impairment constituted 67.42 per cent. This class includes those who had simply a 'bad cold' or had abnormal temperature from any cause, however transient, and in fact any person who was not entitled at the moment to more insurance if he should desire it; also those with albuminuria or any kidney symptoms, or indications in the lungs of incipient tuberculosis, or any other beginning or existing curable disease or condition.

"Those who were seriously impaired constituted 5.55 per cent. This class includes those well advanced in any chronic disease or seriously sick with an acute attack.

"Twenty-five per cent of the policyholders residing in localities which the assistant medical director was able to visit took advantage of the offer. Discounting those who were away from home

at the time and those who had moved without notifying the home office of their change of address, thus failing to receive notice, the percentage would be somewhat larger.

"While it is impossible in any degree to approximate the financial savings that may result from the examinations, yet in several instances the company has been notified by policyholders who were found to be impaired that they had consulted their physicians and that treatment had completely relieved them. There are, as the direct result of the examinations when tuberculosis was diagnosed, now in sanatoria policyholders having several thousand dollars of insurance. A number of clerks and bookkeepers, who were found to have incipient tuberculosis, were advised to change their occupation, and have done so, choosing an outdoor life. While it cannot be claimed that these lives have been saved, yet every insurance company would much prefer to have its tubercular cases in sanatoria or following outdoor vocations, cognizant of their impairments and using their best efforts to restore their health."

* * *

Camorrists in Malingering Conspiracy.—A newspaper correspondent at Rome, says a London contemporary, is responsible for the statement that insurance malingering on a colossal scale has been revealed by the arrest at Naples of 150 members of the notorious Camorra Society on charges of swindling the Government Workmen's Insurance Bank. The amount involved is said to be £160,000. The method adopted by the Camorrists was, he says, to inflict slight wounds on their hands and then to claim payment as injured workmen. The wounds were kept festering for months until the men were placed on the permanent pension list. So far 18,000 cases have been traced.

INSURANCE NEWS IN THE WEST

Fight State Insurance in Wisconsin.—At the annual meeting of the Wisconsin Field Men's Club last week, O. B. Ryon, general counsel of the National Board, fired the first gun in what promises to be a hot campaign in Wisconsin. He spoke against the adoption of the proposed constitutional amendments, the adoption of either of which would permit the State to embark in the insurance business, unrestrained by present legal or constitutional restrictions. Mr. Ryon is not the first who has spoken on this subject. W. A. Fricke, former insurance commissioner of Wisconsin, and now vice-president and general manager of the Great Northern Life of Wausau, turned his guns on these amendments last Winter, but he addressed Wisconsin business men and life and casualty men chiefly. Mr. Ryon presented the subject to the fire insurance men in such a manner as to result in an immediate movement to organize the State and fight the amendments from now until election day. The special agents will take the lead, but will depend largely upon getting the support of the local agents. Mr. Ryon will address the Wisconsin local agents at their meeting.

Insurance Commissioner H. L. Ekern has intimated that the purpose of the proposed amendments is to clear away all question of the constittuionality of the present law under which the State conducts a life insurance fund. Mr. Ekern is a pretty good politician, and he naturally would present the case of the amendments in a way to arouse least opposition to them.

* * *

Bank Failure Hurts Insurance Promotions.—Plans of the Marquette National Fire, of Chicago, are still quite indefinite. The company has started suit to recover from the receiver of the La Salle Street Trust and Savings Bank $374,000 in securities, which the Marquette claims to have bought and paid for in good faith. Some time may elapse, however, before the suit will be settled. One of the officers has stated that the company may conclude to cut its capital to $500,000 and start business when that amount and a fair amount of surplus is actually on hand. It has $125,000 in good securities and $600,000 in stockholders' installment notes. When these notes or a sufficient percentage of them have been paid, the company would have enough to start on. Then it will either recover the securities in the bank or will get its dividends as a depositor in the bank, which would help out the surplus. The trouble to the Marquette National caused by the bank failure is said to be having a bad effect on the other companies whose stock is being sold in Chicago. Sales of stock in the Merchants National were reported slow, even before the bank failed. The promoters of the Hibernia also have expressed disappointment at the slowness with which its stock was being disposed of. If the Marquette National, by reason of the setback it has received, should conclude not to complete its organization, it is doubtful if the two mentioned would be able to complete theirs. The Anglo-American Reinsurance is also selling stock, but it is a going concern and is selling for an increase in capital.

* * *

In Odd Tangle Over Board Rules.—The peculiar position of the Northwestern National, of Milwaukee, in Chicago, has been the subject of some comment of late. President W. M. Patton is a member of the joint committee on large cities of the Western Insurance Bureau and the Western Union. In that capacity he is working to clear up the large city situation in the West. At the same time the Northwestern National and the Northwestern Underwriters are both non-board companies in Chicago. For many years the Northwestern National was the most pronounced non-affiliated company in the West. It went to the extent of remaining out of many local boards. In Chicago it maintained a branch office outside of the board. It was never charged with being a rate cutter, but it openly accepted business from persons who could not qualify as brokers under the board rules. Eight or nine years ago, when John B. Faatz became manager of the Northwestern Underwriters, there was talk of its branch office entering the Chicago board, but this was held impossible because the office of the parent company was outside. When the Western Insurance Bureau was organized, President Patton became a member, to the surprise and delight of many of the fire insurance men of the West. A few months ago its Chicago branch office moved into the Insurance Exchange, where the board agencies are mostly located, and there was talk of its joining the board. There has been a hitch in that programme, however. The board's attitude towards annexes having changed, a person cannot qualify for Class 1 membership now by having the sole agency of an underwriters agency. Accordingly Manager H. M. Hansen of the Northwestern Underwriters is not eligible to board membership, as he has no other company. Thus the Northwestern National could get in if it had no annex, but the annex cannot get in and a company and its annex cannot be one in and one out. The Northwestern Underwriters has a considerable business in Chicago, which it is not likely to sacrifice. Furthermore, that institution has a separate home office from the parent company, is under its own management, has its own field men and underwriting policy and comes nearer being an independent institution than most underwriters agencies are.

* * *

Surety Company Quits.—Another small surety company has decided it is not expedient to continue in the business. The Citizens Trust and Guaranty of Parkersburg, W. Va., has notified its stockholders that the directors have approved the reinsurance of its fidelity and surety business in the National Surety, of which it will take the general agency for West Virginia. The company will now engage in the trust business which it is chartered to do, but was not per-

mitted to do by the law of West Virginia, so long as it was in the fidelity and surety business. It expects to utilize its West Virginia agency plant to get trust business and also surety business for the National Surety. As the local company was by far the leader in West Virginia bonding business, the National Surety will have about half the premium income of the State on this line. The Citizens Trust also did business in Ohio and Kentucky, but not a large volume in either State. Its premium income last year was between ninety and a hundred thousand dollars. Having been in business over a dozen years, it cannot be charged with undue expansion. In fact its operations have been conservative. President Peterkin says that as many new companies have been organized with larger capital than it had (its capital was $400,000), and as many old companies have increased capital, and as most of these have engaged in casualty insurance also, the company was confronted with the alternative of increasing capital and becoming a multiple line company, or of retiring from the bonding field. The excellent opportunity to get a general agency caused it to choose the latter course.

* * *

Scrutinizing Reinsurances.—Superintendent Potts, of Illinois, has made a ruling to the effect that if one foreign casualty company reinsures the business of another, both being licensed in Illinois, and the reinsurance is not approved by the Illinois department, or provision is not made by the reinsuring company to handle the Illinois liability of the reinsured company satisfactorily the department will consider the reinsurance as an act of fraud justifying revocation of the license of the reinsuring company. He states that this action was brought about by the reinsurance of one company by another, neither of which made satisfactory provision for meeting accrued Illinois claims of the reinsured company.

* * *

Quits Distant Field.—The Southern Surety Company has announced that it has retired from British Columbia and will cancel all its business in that province, and that it will not accept any more new business in Washington, although it will carry present risks to expiration and will maintain a claim department at Seattle. The Southern Surety got into the Northwest field by reason of its absorption of the Missouri Fidelity and Casualty, which had a considerable business in that territory. The Southern has concluded it has all the business it can handle nearer home, and that it is not advisable to operate at such a distance with a large intervening district unworked.

LA SALLE.

Chicago, July 3, 1914.

ITEMS OF INSURANCE NEWS

W. Louis Bennett, formerly an insurance broker, at 148th Street and Third Avenue, New York City, who was arrested in Newburgh, N. Y., on May 18, 1914, on complaint of Superintendent of Insurance Frank Hasbrouck for violation of Section 1198 of the Penal Law, in placing insurance in an unauthorized company, was tried June 30 in the Court of Special Sessions, New York City, before Justices Zeller, Morse and Herman. Bennett pleaded guilty to the charge and was sentenced to pay a fine of $100 or thirty days' imprisonment.

A decision believed to be the first of its kind in the United States has been handed down by the Minnesota Supreme Court at Minneapolis, awarding damages for injuries sustained in a fire. Suits were based on the allegations that the fire escapes were insufficient. Mrs. Wardwell received judgment for $2,713. She went down a fire escape until she was compelled to jump twenty feet. Her leg was broken. Margery McCall, as administratrix for Jennette Wilford, a little girl who was burned to death, received judgment for $1,000.

The New York Life Insurance Company announces the promotion of Norman R. Haskell to be assistant secretary and of Harry H. Bottome to be general solicitor. Mr. Haskell has been with the New York Life since 1882, having started in the agency department. Mr. Bottome was associated with the law department of the company since his graduation from Yale University in 1893 until 1905, when he went into general practice. He was general solicitor from 1903 to 1905. He re-entered the company's service in 1911.

A curious insurance, arising out of the damage caused by militant suffragettes was effected recently in London, when some underwriters agreed to indemnify the assured during the next two years against the legal liability he may have incurred through his wife's action in contributing to suffragist funds employed in the destruction of property. They will be liable for any sum in excess of £250 up to £20,000. The premium paid was £75 for two years.

J. C. Cleary, State Labor Commissioner of Arkansas, makes the following statement: "If there is any movement in the State for the enactment of a workmen's compensation act by the next Legislature I have heard nothing of it. So far as I can see, the sawmill men and the insurance men are the only ones that are urging the passage of such a law, and even they do not appear to be agitating it very much now."

The report of the British Columbia Royal Commission on Labor Conditions in the Province includes a recommendation for the repeal of the existing Workmen's Compensation Act and the establishment in its place of a system of State insurance. This scheme, the Commissioners recommend, should be limited to "dangerous" employments, though other employers may come in on request.

President Corwin McDowell, of the New England Casualty Company, at a meeting of the board of directors of that company, was elected chairman of the board, in which position he will hereafter devote his entire time to the accounting department of the company. First Vice-President A. O. Johnson has been made general manager and will be in charge of all other departments.

The report of the examination of the John Hancock Mutual Life, which has just been published by the Massachusetts Insurance Department, shows that since the last examination the annual income has increased from $22,000,000 to over $30,000,000; its assets from $65,000,000 to over $105,000,000 and its insurance in force from $527,000,000 to over $712,000,000.

Commissioner James R. Young of the North Carolina Insurance Department, has addressed a letter to the mayors of the various cities in that State asking their co-operation in a plan to have an expert fireman employed by the Department visit the towns for the purpose of advising and giving information to the officials and firemen.

The Superintendent of Insurance of the District of Columbia, in an address before the Young Men's Christian Association, stated that Americans carry a total insurance on their lives of $34,000,000,000. The old line companies have outstanding 34,552,348 policies, and the fraternal concerns have 7,534,981 outstanding certificates.

The Cleveland Association of Life Underwriters has elected officers as follows: President, A. D. Hatfield; first vice-president, E. B. Hamlin; second vice-president, W. H. Whitney; treasurer, O. W. Olmstead, and secretary, S. R. Johnson.

The Insurance Society of New York has decided to have a course of lectures on fire loss adjustments, a course on automatic sprinklers and another on the insurance laws of the various States.

A Senatorial Commission on Workmen's Compensation, representing the State of Missouri is in New York City after having inquired into the subject in California, Oregon, Washington and Ohio.

The United States Treasury Department has ruled that the mutual fire insurance companies and other similar co-operative and inter-insurance institutions are subject to the income tax.

At a meeting of the directors of the Illinois Surety Company it was voted to reduce the company's capital stock from $500,000 to $250,000, transferring the difference to surplus.

The industrial, health and accident business of the Philadelphia Life Insurance Company has been reinsured by the Massachusetts Bonding and Insurance Company of Boston.

Walter C. Betts, formerly with Higgins & Cox, of New York City, has been appointed general manager of the London and Midland Insurance Company of London.

The meetings next year of the Executive Committee and the General Council of the International Fire Service Council will be held in Copenhagen, in June.

The per capita cost of the fire extinguishing equipment used in Indiana cities averages $1.13, according to the Indiana State Fire Marshal.

The date of the annual meeting of the National Association of Insurance Agents has been changed from August 18 to August 17.

The Appalachian Life Insurance Company of Bristol, Va., has been sold to the Columbia Life Insurance Company of Cincinnati.

The National Association of Mutual Insurance Companies will hold its annual convention at Columbus, Ohio, on September 22-24.

The American Indemnity of Galveston, Tex., has amended its charter increasing its capital stock from $300,000 to $500,000.

FINANCE AND COMMERCE

Financial and Commercial Review.

Banking Situation at Home and Abroad.

Market Prices of Securities and Commodities.

REVIEW OF THE FINANCIAL SITUATION

HOPE that the second half of 1914, both financially and commercially, will be an improvement over the first half is widely entertained and with considerable reason. The impulses which must be generated to start the improving processes are not discernible as yet, but agricultural conditions in our own and other lands are of the most favorable sort; there has been a prolonged shrinkage in consumption of goods and commodities which suggests the probability of some steps to restore the average; financial positions have everywhere been so strengthened that whereas a year ago they were breaking down under a tremendous strain, they are to-day in shape to accommodate a good deal of expansion in values and volumes.

It is especially when the immediate situation is contrasted with that at the turn of the mid-year in 1913, that a basis for optimism appears. Thanks to the impending establishment of the Federal reserve system our potential banking position has been greatly bettered, although there has been a large loss of gold through exports to Europe, which has sorely needed an increase in banking reserves. All the great central banks abroad have been making returns lately which must promote confidence in the underlying stability of the credit system, on the soundness of which the maintenance of modern trade and industry in a state of progressive expansion is absolutely dependent. The world has behind it a twelvemonth of liquidation and destructive happenings which have searched out and removed weak spots from the economic structure.

With the restoration of confidence which must come in time, there should be inaugurated a new period of prosperity for the human race, although we would not seem to commit ourselves at this moment to any prediction of the course of economic events in the near future. There is a continuing struggle between a variety of factors, making for and against a restoration of business and financial confidence, no matter how strong the statistical appeal to the spirit of enterprise. It would seem altogether likely that if the economic journey immediately ahead lies uphill rather than down, the early stages of ascent will be slow, toilsome and difficult and characterized by much slipping backward. Calculations of the future will have to include for a long time a large allowance for the fearful racking and wrenching to which the banking and business community has been subjected and must count upon after effects of such an experience. Moreover, while men of affairs have too much sense to wait at any time for clear skies, there are still too many clouds in the sky, political clouds chiefly, to permit any large projection of forward enterprise.

A test of the foreign situation was undoubtedly afforded in the past week by the fresh tragedy involving the reigning house in Austria. The assassination of the Archduke Ferdinand and his wife, an evident act of vengence for Austria's aggressions on Slav states, was such an episode as must have infallibly precipitated more than a moderate financial panic in Europe a year ago. Concern for the peace of Europe has been aggravated by the occurrences of the last few years, and the failure of financial confidence to return abroad is owing more to doubt about the preservation of European peace than to anything else, including even the encroachments of socialistic domestic politics in various lands on the capitalistic organization. Nevertheless there was hardly a ripple of disturbance on the surface of the European bourses and stock exchanges when the news of the murder of the Austrian Archduke was published.

This was striking testimony, corroborative of similar indications furnished in our own country, to the extent to which economic affairs had been liquidated to an irreducible minimum and the conclusions which are drawn therefrom are of good augury for financial and business recovery, given some incentives to recovery. It may be that a forward impetus will be provided by the flotation of the French National loan next week, particularly if the subscription should be a more or less satisfactory success of public buying rather than of banking support. Yet it is doubtful if American business can expect Europe to supply a momentum to betterment. The economic history of the last half century all goes to suggest that conservative Europe will not of itself tend to move forward until and unless the United States, the most forward looking nation in the world, begins to recover confidence and commits itself to ventures for future profit. The most hopeful thing which can just now be said on the score of Europe is that conditions abroad do not seem likely to militate against an economic revival here if the domestic conditions of revival are otherwise propitious.

National politics is still the most depressing factor with which our merchants and manufacturers and bankers have to contend. There is persistently evinced at Washington a most discouraging lack of intelligence respecting the American business character, the requirements of American business and the proper relations which Government should maintain toward them. No more exasperating illustration of what we mean has been provided than is contained in the obstructive efforts of some imbecile Senators to block the confirmation of Mr. Paul Warburg's appointment to the Federal Reserve Board. It is inconceivable that obstruction should have its way, for if Mr. Warburg, who is so supremely qualified for membership on the board, can be excluded therefrom, the whole world will wonder into whose hands the American people are willing to entrust the conduct of the colossal aggregate of American business enterprises.

By the vote of the Democratic Senate caucus last Wednesday it was demonstrated that the whole Summer might pass with Congress still in session trying to cope with President Wilson's formidable programme of further legislation in the business field. There is nothing in this prospect which can be regarded as contributing to a speedy business revival and, despite President Wilson's happy thoughts on the subject of business and political relations our contemporary politics provides no basis for financial and business optimism, but the contrary. Uncertainty as to the time when business legislation is going to be enacted is far from being, as the Administration thinks it is, the most detrimental factor in the business situation. If that were so there would to-day be no such severe criticism as is bestowed on the operations of the revised tariff law which was passed last Autumn, and no discussion about the dubious features of the Federal reserve act in their bearings on financial developments.

The Administration's pending programme of statutory interference with business endeavor has not commended itself to informed judgment as a miracle of law making, and the programme has itself provoked much uneasiness about the consequences of

subjecting business enterprise to its provisions. Not only does uncertainty for business fail to end with legislation, but new uncertainties are always added and frequently they are of the greater importance. Uncertainty as to the effect of laws is much more paralyzing than the uncertainties of a legislative situation which is all the Administration seems to regard.

One trouble with all considerations of the political factor in values is that at the present time they lead up a blind alley. Nobody can clearly see just what alternative of relief is to offer from the particular kind of politics with which business is afflicted. There is no large amount of comfort to be derived from the Rooseveltian tirade delivered at Pittsburgh last week. It was very satisfying as a caustic review of the achievements of the Wilson Administration, but when the Colonel unfolded his own prospectus it was not obvious that it contemplated anything in the nature of a real political change. Until the march of events shows whether or not there is any possibility of rational conservatism coming to dominate the councils of a potentially victorious party, it is a fair surmise that business will proceed very slowly to discount a future comparatively free from unsettlement by politicians ambitious to hoist themselves into office with schemes that promise in the last analysis to raise the price of whatever one has to sell while lowering the cost of whatever one wants to buy.

There were echoes in the last few days of the Claflin failure, but it began to be realized that this was not a symptomatic episode. The Interstate Commerce Commission continued to trifle with expectations by delaying decision in the Eastern rate case. The Wall Street stock market came almost to a standstill. The money market showed in the disorganization of commercial paper that the Claflin failure had had a disconcerting influence, but money conditions are wholly adverse to any very disastrous reflection of the Claflin collapse. Foreign exchange suggested the likelihood of further gold exports to Paris, but it was banking opinion that the persistent French demand for gold was not a token of latent trouble so much as an expression of the consistent policy of the Bank of France to take advantage of periods of depression to augment its gold holdings. All the really good news of the week was comprised in crop reports, and these were almost uniformly of an optimistic tendency, even cotton having shown a gain during June.

COTTON

July 3, 1914.

THE central event of the week for the cotton markets was the publication on Wednesday of the estimates of the Bureau of Statistics of the Department of Agriculture, of the acreage planted to cotton this year and of the condition of the growing crop, as at June 25. The trade had been much at sea over the probable figures of both these estimates. The uncertainty about the acreage arose from the reports of fields abandoned or unplanted West of the Mississippi River by reason of the wet weather of May and June, and of fields in the Atlantic States in which the seed had never germinated because of the heat and drought in that section during the same months. The uncertainty about the condition figure was due to the known lateness and irregularity of the crop over large areas. The confusion was perhaps increased by the anticipatory forecasts of private crop observers. On Tuesday, the New York "Journal of Commerce" issued its monthly estimate of condition and its annual estimate of acreage. The latter it put at 36,822,000 acres, as compared with the Government's revised estimate of 37,458,000 acres last year, a reduction of 1.7 per cent. The condition it estimated at 78.6 per cent of normal, as compared with its own figure of 80.9 per cent of normal on the same date last year. More striking, however, than any other feature of the report of the "Journal of Commerce" was the fact that the improvement in condition shown for the month from May 25, to June 25, was only 0.4 per cent. On Tuesday. also, Miss Kate M. Giles issued her condition figure for June 25, making it 79 per cent of normal, as compared with her own 77.5 per cent of normal a month earlier. She further estimated a decrease of 1.4 per cent in the acreage. The New York "Commercial" put the condition at 78 per cent of normal, and indicated a slight increase of acreage. The average guess of 104 members of the New York Cotton Exchange as to the probable condition figure of the Department of Agriculture was 78.1, though it is probable that many secretly believed it would prove decidedly lower than this, perhaps as low as 75 to 76 per cent. The Department of Agriculture's report on Wednesday actually showed a condition, as at June 25, of 79.6 per cent of normal, compared with 74.3 per cent a month earlier, with 81.8 per cent a year ago, and with a ten-year average of 80.7 per cent. The acreage was estimated at 36,960,000 acres, compared with the final revised estimate of 37,458.000 acres for 1913. The impression created by these figures, when given out, was decidedly bearish. The trade had not expected so large an improvement in condition during June as 5.3 per cent; and the comparatively small decrease in acreage was scarcely noticed, because all had in mind the successive upward adjustments made by the Department in its acreage figures of last year. The markets immediately eased off, and the declining tendency was even more pronounced on Thursday and Friday, there being a total decline in New York of nearly 50 points from the price level just before the report was issued. A sudden increase of bearish sentiment was immediately observable, and numerous predictions of a speedy decline of 1 cent or more per pound were heard. It was once more asserted that a really large crop of cotton might fairly be counted on, unless very unfavorable weather should be experienced during the next two months. Very few undertook to calculate the actual crop expectancy indicated by the Government acreage and condition figures, though the results of such a calculation would have shown that the interpretation of the figures could by no manner of means be considered as bearish. The Department of Agriculture announced a month ago the number of pounds of lint cotton per acre indicated by 100 per cent (normal) at the beginning of each successive month of the season of 1914. For July 1 this "normal," or 100 per cent, is given as 232 pounds. A condition of 79.6 per cent of normal, therefore, means a productive expectancy of 232×.796, or 184.672 pounds of lint cotton per acre. This average production on 36,960,000 acres would mean a total production of 6,715,497,120 pounds of lint cotton, or 14,049.157 bales of cotton of 500 pounds gross weight (478 pounds net weight). Now the crop expectancy indicated by the condition report of July, 1913, (81.8 per cent of normal) applied to the revised acreage figure for 1913,—i.e., 37.458,000 acres,—was no less than 14,637,463 bales of 500 pounds gross. In other words, the Department of Agriculture in its July report this year prognosticates a final yield smaller than last year's by 588,306 bales. Assuredly, it is difficult to find an argument for declining prices here. It may, of course, be that the weather during July and August this year will be as abnormally good all over the Cotton Belt, as it certainly was abnormally bad last year West of the Mississippi River. In that case the present crop may attain or even exceed last year's crop. But all reports concur in saying that, except for restricted districts, the present crop is one of the latest of recent record, as well as that it is extraordinarily uneven and irregular in its stands. The boll-weevil, too, is reported as more numerous in all the infested sections than for several years past, while the infested area has been considerably extended both towards the East and towards the North. These are heavy handicaps to overcome, be the weather never so good. Indeed, really good weather for cotton will bring with it precisely the conditions most suitable for the propagation, activity and destructiveness of the boll-weevil. As against any threatened scarcity of cotton, however, it is argued that there must be a severe reduction in the consumption in 1914-15, because of the general industrial, commercial and financial depression in all the Occidental world. This is now a story many months old, yet the consumption of cotton has somehow held its own. It must be admitted, of course, that the cry of "wolf" may finally come true. There is much complaining from cotton manufacturers, both in this and in foreign countries, as to the unprofitableness of their business. Yet the distribution of cotton goods, taking the world as a whole, seems to be going on in virtually undiminished volume. A good monsoon has broken in India, so that that great market will need goods. Perhaps it will be the same in time elsewhere.

THE CONTRACT MARKETS

THE NEW YORK COTTON EXCHANGE.

GOVERNMENT REPORT ON ACREAGE AND CONDITION OF THE COTTON CROP ON JUNE 25, 1913.

The Crop Reporting Board of the Bureau of Crop Estimates (formerly Bureau of Statistics) of the United States Department of Agriculture estimates, from the reports of the correspondents and agents of the Bureau, that the area of cotton in cultivation this year (1914) in the United States is about 36,960,000 acres, as compared with 37,458,000 acres, the revised estimate of acreage in cultivation a year ago, being a decrease of 498,000 acres, or 1.3 per cent.

The condition of the growing crop on June 25, was 79.6 per cent of a normal condition, as compared with 74.3 on May 25, 1914, 81.8 on June 25, 1913, and 80.7, the average condition for the past ten years on June 25. Details by States follow:

	Area Under Cultivation a Year Ago (Revised Estimate).	Area, 1914. Preliminary Estimate—Pct. Compared With 1913.	Area, 1914. Preliminary Estimate—Acres.	Condition—June 25, 1914.	Condition—May 25, 1914.	Condition—June 25—Ten-Year Av'ge. 1913.	Condition—June 25—Ten-Year Av'ge. Av'ge.

Cotton Growing in Italian North Africa.—Mr. N. Roderick Dorsey, United States Consul at Tripoli, Libya, transmits, as follows, his translation of an article in the "Boletino di Informazioni" of the "Ufficio Economico-Finanzario," Rome, for December, 1913:

"The Society for the Cultivation of Cotton in Eritrea has started some culture experiments in Tripoli, to study the adaptability of various types of cotton to the soil of the oases. The trials were conducted on nearly seven and a half acres, planted with Russells and Allens, herbaceous American varieties from Florida; the first is very early and will give two crops a year; the second is less forward, has more branches, and is very productive. Planting was made in November, 1912, with seed disinfected with lysoform, but the Winter cold killed the young plants and it was necessary to

replant at the beginning of the following June. The harvest from this planting was begun in the second half of October, and completed in three pickings, with interval of fifteen days. The plants were irrigated six times during the Summer in conformity with the Arab custom, the ground having been previously subdivided into small plats. The ground was not manured, as it had been planted to green crops. No disease attacked the plants. The harvest was abundant and of excellent quality, the fibre of the Allens attaining an average length of eighteen millimeters and a maximum of twenty-two millimeters (seven-tenths and eighty-seven one-hundredths inch, respectively). The best results were obtained with the Mebane of the Mississippi, with respect both to quantity and quality of fiber, the length of which attained thirty-eight millimeters (one and one-half inches). Not so much can be said of the Willets variety, which was grown with little irrigation —only once or twice during the sprouting period. Many young plants died, others survived only where they were grown among watermelons whose abundant foilage no doubt protected the young plants from the sun's heat and conserved the moisture in the ground. It was not possible to have exact data, but the society asserts that there was a fair margin of profit.

"During 1914, the experiments will be repeated in the various seasons. Non-irrigation outside the oases will be tried with selected Mebane seed.

"The few cotton plants that are cultivated in the oases by the natives belong to the herbaceous variety which assumed the dwarf-tree form. They are constantly irrigated, but it is thought that owing to their robustness and woody condition they could live tolerably well without irrigation in those lands that retain a certain amount of moisture in the subsoil. This is shown by some existing examples in the gardens of Tripoli that have been abandoned and left to themselves for more than two years."

* * *

Salonika.—In a review of trade conditions and prospects in Salonika, New Greece, Mr. John E. Kehl, United States Consul, writes: "Textiles form the principal import item. Previous to the recent political changes the average annual importation was valued at more than $5,500,000. As to the future the view of the trade is very pessimistic. The participation of American fabrics is limited almost entirely to cabot sheeting. The annual consumption of this article is estimated at 1,300 bales of 25 pieces each. Albania, now a principality, was a heavy purchaser of cabot from Saloniki merchants. In general, the imports consist of gray, bleached, printed, and colored piece goods; gauze, tulle, and muslin; embroidered tissues, bed and table covers, shawls, velvet, tissues for curtains, handkerchiefs, napkins, lace, passamenterie, and knit goods."

NEW YORK QUOTATIONS FOR STANDARD COTTON GOODS AND YARNS

The following are quoted prices in the New York market for typical standard cotton goods (in cents per yard) and cotton yarns (in cents per pound) on Saturday of last week and on Wednesday of the present week:

Cloths.	Saturday.	Wednesday.

MUNICIPAL BONDS AS INVESTMENTS

[Reprinted from "The Standard" of Boston]

THE new Massachusetts law, which is expected to place the municipal bonds issued in the State upon a sounder basis than those of any other State in the Union, has been made the subject of an interesting discussion in the Boston "Post," one of the results of the discussion being to show the desirability of this class of bonds as life insurance company investments.

It appears, for instance, that the average annual loss on about $77,000,000 invested by 189 representative financial institutions in Government, State and municipal bonds has been for the past fifteen years $0.0023 per $1,000 invested, an amount almost infinitisimal, while the losses on real estate and real estate loans were 300 times as much. It is of course true that the bond investments of the institutions in question have been carefully made, but that would also be true in the case of life companies.

President Joseph A. DeBoer of the National Life, one of the contributors to the discussion, reviews the subject broadly as follows:

"Municipal bonds are to-day receiving increased consideration by life companies, other trust funds and individual investors because of a constantly experienced lesser fluctuation in their values, because of their exemption under the Federal income tax law, and, in some States, from the general property tax, because their validity is easily established by competent bond attorneys and primarily because their payment rests upon taxation instead of upon earnings derived from single properties of whatever nature. They have back of them a constituency of population and of public credit instead of property, with its fluctuating earning capacity, and individual credit. Municipal bonds, if rightly chosen, are not speculative in their nature, like those industrials which have not been proven up through long periods of business depression, nor are they exposed to the inherent character of railroad bonds, which are seldom paid but usually refunded, at maturity and upon such terms as can be realized at the time.

"But even municipals themselves during the past twenty years have greatly fluctuated in price, the tendency having been during all of the period to yield the investor an increasingly higher rate of return. This has been true even in easy money times, following periods of panic and in spite of favorable influences induced for a time through exemptions from local taxation. The State of Massachusetts bonds, for example, sold on a 3 per cent basis in 1895, on a 2.92 per cent basis in 1899, while to-day they yield a rate of 3.95 per cent or better. Here is a difference of 95 points in twenty years and of 103 points in fifteen years. The City of Boston bonds supplied in basic returns an increase of 75 points and 92 points during the same period. New York City's sold in 1895 on a 3.15 per cent basis, in 1899 as low as 2.88 per cent, while at present they range at 4.15 per cent or better.

"Taking the past twenty years for Ohio, the differences in returns are not so great. Thus the basic rate rose on Cleveland's from 3.40 per cent to 4.10 per cent, and on Canton's from 3.70 per cent to 4.20 per cent. During this period, also, St. Paul's rose from 3.60 per cent to 4.15 per cent, Minneapolis' from 3.75 to 4.20 per cent, Chicago's from 3.75 to 4.10 per cent, Detroit's from 3.35 to 4.05 per cent, and Omaha's from 3.95 to 4.40 per cent. The differences in similar municipal entities and county bonds are yet more marked. With only temporary upward shifts in prices due to exemption from taxation and the state of money markets, the general tendency has constantly been in favor of higher interest returns to the investor, with a concurrent shrinkage, of course, in the market values of outstanding bonds. This tendency, with variations, pertains to other forms of bonds but is yet more pronounced.

"In a broad way this signifies that capital has found increased outlets in safe mortgage investments, notably on the security of farms, and also an enormously increased outlet through industrial expansions, but most of all it points to the fact of a serious loss in municipal credits as a result of increasing municipal debts. If the figures for cities of at least 30,000 population be considered it will be found that their combined receipts for a single year now total about 1¾ billions. This income is derived as follows: 38 per cent from the general property tax, 4 per cent from licenses, 5 per cent from special assessments for betterments, 7 per cent from earnings and 46 per cent from the sale of bonds and credits. The Bureau of the Census advises that for the decade ending with 1911 cities to the number of 146, whose population is 30,000 or over, increased their expenditures from $462,000,000 to $862,000,000, an increase of 87 per cent in ten years, or at an average annual rate of 8.7 per cent, or over one-twelfth per annum. This proves bad or, at least, most questionable municipal management, and its imporance is further emphasized by the statement that the per capita expenditure was $28.55, as compared with a Federal expenditure of $9.62, or a municipal expenditure of 297 per cent compared with that of the Nation.

"But while the statistics attest this enormous increase in municipal debts and expenditures, it is also true that in the single year of 1911 municipalities in the United States retired close to a half-billion of their bonds. Still it stands proven that under existing methods municipalities have not found the means for their needs without borrowing. It is a condition which calls for definite reform in taxation laws and financial systems.

"The basic rate of return on high-grade municipal bond purchases is not likely to be reduced materially in the immediate future, except as the matter is influenced by the tendency to exempt them from local taxation, a vicious principle, though their price may also be influenced through an expansion of their markets."

Things and actions are what they are, and the consequences of them will be what they will be; why then should we desire to be deceived?—Bishop Butler's Sermons at the Rolls.

The price of all copies of THE MARKET WORLD AND CHRONICLE, except those delivered under regular annual subscription, has been increased to Twenty-five cents each

WE have been interested for a variety of reasons in the announcement that Mr. George W. Perkins, as Chairman of the Department of Social Insurance of the National Civic Federation, has appointed a committee of three well-known persons to investigate and report upon the social insurance laws of Europe, particularly sickness and unemployment insurance and old age pensions. It will, of course, be worth while to obtain the the impressions of Mr. P. Tecumseh Sherman, the experienced student of workmen's compensation, Mr. Arthur Williams, the president of the important employer of labor, the Edison Illuminating Companies, and Mr. J. W. Sullivan, a respected member of Typographical Union No. 6, with regard to the practical operation in England and on the Continent of Europe of these now common forms of alleviation of the lot of the wage-earning class. It was certain that, just as workmen's compensation crept in upon this country almost unawares at first, so the sister forms of social insurance would before long begin to excite attention here. The temper of the time in the United States is to apply to the wage-earner all the known kinds of social help, even if he is thereby made a member of the proletariat, after the European fashion, instead of the independent, self-governing, self-helping American of the older time. This being so, the sooner we get exact information on the subject, the better. This paper has already done its modest part in this direction, and has had the honor of being called by Dr. Rubinow, author of "Social Insurance", "perhaps the only one [insurance and economic journal] in which an intelligent interest in social insurance problems may be noticed." Hence, like the ancient Athenians, we are hopeful that "something new" may result from the explorations of Mr. Perkins' committee.

We cannot help, however, feeling some slight suspicion, probably by reason of the prominence of Mr. Perkins in the matter, that the mission is tinged with political interest, rather than directly inspired by a pure zeal for humanity. There have been signs for some time past that Mr. Perkins' chief, Colonel Roosevelt, thinks there is good political material in social insurance. The éclat of Mr. Lloyd George's triumphant achievement of sickness insurance, unemployment insurance and old age pensions in Great Britain has evidently not been without its effect upon Colonel Roosevelt's mind. It has been proved by experience that great political victories can be won through advocacy of these means of relief and comfort for the less fortunate members of society.

Yet we do not believe that it is English social insurance that chiefly interests either Colonel Roosevelt or Mr. Perkins. The example of Mr. Lloyd George is after all that of a fanatical believer in transferring by almost any means,—social insurance among them,—the superfluous wealth of the rich to the toiling masses. We do not suspect either Colonel Roosevelt or Mr. Perkins of any such leveling aims. If we have interpreted their casual utterances aright, it is social insurance as conceived in Germany that is their real concern. In that country the function of social insurance is not at all to transfer wealth from the rich to the poor, but rather to maintain the working classes contented and well cared for, in order that the control of the State by the rich and the aristocratic classes may be the more confirmed. Colonel Roosevelt has of late more than once spoken in praise of the German economic and social system, under which the owners and managers of the great industries, comfortably supervised and regulated by a Government which is after all one of their own class, look out for the welfare of the wage-earners (naturally, in their proper place) as both a National and as a private duty, employing social insurance as their chief means. We should suppose that this arrangement of things would completely meet Mr. Perkins' approval, and that Colonel Roosevelt would not find it alien from his mind. We anticipate, therefore, a good deal of activity about social insurance in the not distant future; and that the type and mode of application urged upon us will be rather that of Bismarck than that of Mr. Lloyd George.

THE Thompson-Starrett Company is a large contracting corporation, domiciled in New York City but with its business represented in various large cities through the country, which is chiefly engaged in taking and carrying out contracts for the erection of important

structures, public and private, of what may be called the sky-scraper class. The beetling Municipal Building and the soaring Woolworth Building in New York City are examples of its work. At this very moment, it is constructing the vast new building of the Equitable Life Assurance Society. It claims for itself unusual expertness and efficiency in all its undertakings; and it would seem reasonable to suppose that there is some justification for the claim, inasmuch as very important works of construction are certainly entrusted to it.

In the New York "Times," of Monday last, the Thompson-Starrett Company published an advertisement which read as follows:

"FUTURES"

An Owner who employs a contractor who cannot give him positive assurances as to cost and time, might just as well speculate in "futures" on the cotton market.

There is not the slightest reason in the world why the Owner of a building operation should not at the start be in possession of accurate and definitive information as to what his building will cost and how long it will take to build.

We long ago proved that.

THOMPSON-STARRETT COMPANY
Building Construction

It is sufficiently obvious that in this advertisement the Thompson-Starrett Company is setting out its own virtues by comparing them with the vices of the only "cotton market" near enough for it to know anything about, the New York Cotton Exchange. The purpose is to bring out sharply the antithesis between the absolute reliability and calculability of the business conducted by this virtuous corporation, and the reckless, unconsidered and hazardous business of speculation in "futures" on the New York Cotton Exchange. It must be admitted that there is nothing very novel about this procedure, as it is wholly in the fashion to attribute unsoundness and the negation of economic worth to all that goes on upon the cotton exchanges. No one knows how large a volume would be required to contain the speeches of this tenor that have been made in Congress during the past seven or eight years. And more than one self-satisfied business man has thanked God in public that he was not one of the tribe of cotton gamblers. Hence it was by no means a far cry for the Thompson-Starrett Company to find this illustration of how great a contrast there is between its own immaculate business and some other business activities that are to be found amongst us.

The very ease of the comparison, however, may incite the critical mind to inquire whether it can possibly be an exact one. Is it a fact that those who "speculate in 'futures' on the cotton market" are infinitely removed in respect of the character of their transactions from the Thompson-Starrett Company itself. This corporation undoubtedly enjoys a high reputation and a high credit; but how about those who deal "on the cotton market"? It is a fact of perhaps some significance that the merchants who are members of the New York Cotton Exchange handle every year rising 80 per cent of the entire cotton crop of the United States, i. e. 80 per cent of a crop now worth not far from $1,000,000,000. They have reputation and credit enough for this, which is something. But this is not all; for these same merchants are able to enter into transactions, often reaching months and years into the future, with merchants and spinners thousands of miles away,—in Europe, in India, in Japan,—upon the mere faith of a cabled message; and these transactions frequent involve amounts of money as large as the Thompson-Starrett Company would receive for the erection of a large building. Has the Thompson-Starrett Company the reputation and credit to do this? Could any person or any group of persons engaged in a hazardous, incalculable and desperate business do it? Are those distant merchants and spinners who trust to the fulfilment of the engagements of these members of the New York Cotton Exchange running a higher degree of risk than are the customers of the Thompson-Starrett Company in their nearby dealings with it? As the record of failures among these cotton merchants through which their customers near and far have lost substantial sums of money is about one in twenty-five years, we hardly think so.

But how about this assured and of course non-speculative business which the Thompson-Starrett Company holds itself out as having discovered a method of doing? It is certainly a remarkable achievement to have found a way to get rid of all speculative elements in the construction of great buildings,—if, indeed, the way has been found. We had supposed that when a contracting concern goes "short" of labor, of steel, of stone, of bricks, of the multitude of materials required for the construction of a large building, as it does when it enters into a contract to construct and deliver the building at a specified cost and time, no inconsiderable element of speculation was involved, even if some part of the materials was bought at the time of making the contract. Or, if the contracting concern undertakes to do the work of construction, buying the labor and materials with the owner's money and for his account, and charging a percentage for its own services, we were under the impression that the speculative risk was simply transferred from the contracting concern to the owner himself. We know, of course, that the changeableness of the seasons does not affect the supply of building materials and of labor as it does the supply of cotton, and that the price fluctuations are much less numerous and severe. But there is price fluctuation and somebody must take the risk of it. How has the Thompson-Starrett Company done away with this necessity? It declares that it has accomplished this economic feat, for there can be no other meaning of the statement that "an Owner who employs a contractor who cannot give him positive assurance as to cost and time, might just as well speculate in 'futures' on the cotton market." And by what process has the company eliminated all risks of strikes, railroad tie-ups, panics, failures of sub-contractors and the multitude of other complications that beset extensive works of construction?

Of course, the truth is that, though it may have found ways to take precautions against them, it has not discovered a way to eliminate these risks. It cannot in reality give any owner desirous of constructing a building "positive assurances of cost and time." To say that it can is to say what is untrue. In essence, it is just as misleading to advertise that "there is not the slightest reason in the world why the Owner of a building operation should not at the start be in possession of accurate information as to what his building will cost and how long it will take to build," as it would be to advertise that the cotton which a manufacturer must have six months from now can then be bought in the open mar-

ket at a given price. Among those who "speculate in 'futures' on the cotton market" this kind of advertising is associated with tipsters and bucket-shop operators.

From one point of view it may be said truly enough that all this is but making a mountain out of a mole-hill; but from another point of view the matter is of more serious import. We cannot doubt that no small part of the disturbing legislation about business with which our time is afflicted has had its genesis in precisely this kind of loose and irresponsible talk on the part of one set of business men about the iniquities of another. It is after all no trifle that an important industrial corporation should in a public advertisement hold up to scorn an association of fellow business men, implying that their dealings are the opposite of all that is conservative, trustworthy and responsible. And in this time, when public opinion is formed in much the same way as the impression on the retina of the swift-fleeting moving picture films, the political and economic resultant of such casual judgments may be out of all proportion to their real worth.

Arthur Richmond Marsh

THE UNIVERSAL POSTAL UNION AND THE PROPOSED REDUCTION OF INTERNATIONAL POSTAGE

By Edmond Bouchery

Translated from "L'Économiste Européen"

A REFORM, apparently trifling in itself, yet destined to have, nevertheless, an effect the world over, is at the present moment under serious discussion. It is a matter of reducing from twenty-five centimes [5 cents] to fifteen centimes [3 cents] the international postal tariff. This new tariff will be, it is believed, discussed during the course of the year by the members of the Universal Postal Union. A certain number of nations have already declared themselves in favor of the reform; and it is conceivable that at least a partial success will be achieved, in case the majority of the countries in the Union should show themselves hostile to a general reduction of the tariff. The nations are, in fact, entitled to form limited unions among themselves, even if the letters must cross countries not taking part in these special unions; and this is probably what would happen if the proposed reduction should find a majority opposed to it.

This projected reform of the international postal tariff, seemingly so slight a matter, would be far from lacking in importance for the world of business, and would, perhaps, also make itself felt, at least during the first years of its application, in the finances of the interested countries. It is easy to see how this would be the case, by examining the statistics concerning the universal postal service, compiled through the efforts of "The International Bureau of Berne."

It is not perhaps amiss first to say a few words concerning the Universal Postal Union, on which the Bureau of Berne depends. It may be recalled, then, that the Union was established by the International Convention of Berne, on October 9, 1874, the successive Congresses of Paris (1878), Lisbon (1885), and Vienna (1891) having brought together all the international postal legislation in the shape of fifteen diplomatic conventions. Developed thereafter by the Congress of Washington (1897) and of Rome (1906), the Union includes to-day every commonwealth and every colony having an organized postal service, being almost every country of the world (about 117,000,000 square kilometers [67,000,000 square miles], with 1,279,000,000 inhabitants).

The principal convention of the Union forms of all the contracting countries "a single postal territory for the reciprocal exchange of letters between post-offices," and it guarantees the uniformity of the postage; but to the principle convention have come to be added successively special arrangements concluded between most of the countries of the Union, and having for their object the international exchange of letters and packages of which the value is declared, of money orders, of parcels post packages, of C. O. D. transmissions, of collections of accounts, etc.

In its early days, the Union scarcely occupied itself with anything, from the international point of view, except the improving of means of transportation, the method of forwarding, the transmission from country to country of letters, postal cards, printed matter, commercial and financial documents, and samples. But other forms of service had to be established little by little, as, for example, the international passport service and subscriptions to publications, etc.

To carry on with the highest efficiency a task of such importance, an office was established at Berne, under the name of the "International Bureau of the Universal Postal Union." Through pure courtesy, this Bureau was placed under the final supervision of the Post Office Department of the Swiss Republic; but it enjoys the most complete autonomy. The ordinary budget of the International Bureau, fixed at first at 7,500 francs [franc=19.3 cents], has been successively raised as time went on, first, to 100,000 francs, and then to 125,000 francs. Extraordinary allowances may, besides, be made it under certain circumstances (congresses, conferences, etc.).

The Bureau of Berne gathers, classifies, makes public and has distributed or published information concerning the international postal service. In all cases of controversy, the Bureau may be consulted, and its conclusions are almost always followed to the letter. It prepares the programmes for future congresses, and the modifications to be made in existing provisions. It publishes each year, moreover, a general statistical review of the operations of the Union. Finally, it issues an organ, "The Postal Union," and keeps up to date a directory of the post offices of the entire world.

The International Bureau of Berne has, then, it appears, a task of the greatest importance, which naturally increases constantly, in proportion as international relations develop more and more in extent.

The following table, which gives, for periods twenty years apart, the financial results of the international postal service, makes it possible to comprehend the development of postal communications between nations.

FINANCIAL RESULTS OF THE UNIVERSAL POSTAL SERVICE IN 1890 AND 1910.

*Figures include postal service, telegraph and telephone.
†Figures include postal service and telegraph.
‡Figures confused with other services and thus not exactly known.

These figures make very clearly evident the considerable importance of the postal service throughout the entire world. Other figures follow which will make it more easy to comprehend the tremendous impetus given to the postal movement by the reduction and uniformity of rates,—results which are due to the Postal Union.

For example, as regards letters alone exchanged between France and other countries, it is found that their number, after increasing from twenty-two millions in 1855 to thirty-nine millions in 1865, and from thirty-nine to sixty-seven millions during the following ten years, rose successively, after the creation of the Postal Union: from 67 to 104 millions in the period 1875-1880; from 104 to 165 millions between 1880 and 1890; from 165 to 239 millions between 1890 and 1900; and finally from 239 to 384 millions between 1900 and 1911.

This growth in the postal movement is not, however, peculiar to France alone. Just to give a general idea of the importance of the postal movement in its entirety, it appears, (although these figures are not absolutely accurate), that there were transmitted in 1908, in the territory of the Union: 38,272 million correspondences (letters, postal cards, printed matter, commercial and financial documents, and samples); forty-seven million letters and packages the value of which was declared, to a total amount of 57,114 millions of francs; 680 million money-orders, for a sum of 35,380 million francs; 640 million parcels, with and without value declared, for a total of 23,176 million francs; sixty million C. O. D. transmissions and other collections for a total of 3,588 million francs; and 3,508 million of various publications having the privilege of subscriptions through the post-office.

Such figures require no comment, and they make it possible to conceive what the real importance may be of this trifling change of a reduction of ten centimes [2 cents] in the international postal tariff.

RAILROAD RATE MAKING AND REGULATION IN THE UNITED STATES IN THEIR PHYSICAL ASPECTS

THE continually new tasks entrusted by Congress to the Interstate Commerce Commission are setting many people to thinking of the vast magnitude, from a purely physical point of view, of the work which the Commission is already called upon to do, and to wondering whether, physical strength and mental energy being what they are, it can be expected that prompt and efficient service will be obtainable from men so burdened. In no other country in the world has it ever been attempted to place such immense responsibilities, involving such herculean labors, upon a small body of public officials. Whatever may be the staff at their command, it seems impossible that they should give to the results presented to them by this staff the fresh attention which their duty demands, much less have left unwearied minds wherewith to pass upon the railroad problems of the greatest commercial nation on earth. If it be true that the nationalization of our railroads is impending, the insuperable difficulties in the way of having them managed by the Interstate Commerce Commission, as at present constituted, are only too apparent.

Desirous of obtaining some idea of what is physically involved in the duties of the Commission, the Peoples National Bank, of Pittsburgh, Pa., recently had a study made by a competent expert of the number of freight rates in the United States affected by any general change in the freight tariff basis. According to a published statement of the Bank, no one,—not even the Interstate Commerce Commission itself,—has ever before attempted to obtain this information. Assistance was had in the present undertaking from the foremost traffic authorities in the country. The figures obtained were hardly less than appalling in their magnitude. The published statement of the Bank on the subject is as follows:

* * *

"While there has been much impatience manifested over the delay by the Interstate Commerce Commission in rendering a decision in the 5 per cent rate increase case, it is probable that few persons appreciate the magnitude of the burdens forced upon or assumed by that Commission. Few persons outside that body know, for instance, that there are literally thousands of millions of freight ratings alone, for which tariffs are filed by the carriers with the Interstate Commerce Commission, any one of which contains the potentialities for a dispute that may constitute a 'case' for consideration by the Commission. There are also more than 10,000 different articles of freight coming under twenty-one different classifications (including multiple ratings, but not including commodity rates) which contain the possibility for innocent error by a railway station agent and may engage the attention of the Commission. This is only one phase of the Commission's work in regulating a business aggregating several billion dollars gross per annum.

"Believing that if facts were better known there would be less public clamor for even greater Government control of business, and that the physical impossibility of prompt and satisfactory service on the part of the Government commissions would become obvious, this bank obtained the subjoined statement on the subject from an acknowledged expert. No similar investigation had ever been attempted, so far as known, and in compiling the data the aid and suggestion of some of the foremost traffic authorities in the country were drawn upon. The facts and figures are amazing even to those familiar with the subject. They were compiled with painstaking care and are under rather than overstated. They are herewith submitted as an interesting study of a subject concerning which there is much popular ignorance:

" 'The total number of stations outside of the State of Pennsylvania, in the United States, Canada and Mexico, to which railroads in the State of Pennsylvania can sell tickets is approximately 77,744, multiplied by the number of stations on fifty-one roads in Pennsylvania selling interstate tickets, 2,531, multiplied by two

(both directions) equals 393,540,128, the total number of passenger rates from all points in Pennsylvania to all destinations outside of Pennsylvania, in both directions, for which tariffs are filed with the Interstate Commerce Commission.

"'The following is a condensed statement of all classified freight ratings that can be secured from published tariffs filed with the Interstate Commerce Commission, covering the various classes of articles that can be shipped by freight:

NUMBER OF ARTICLES OF FREIGHT ON WHICH RATINGS APPLY.

Classes of Freight.	Less Than Carload.	Carload.	Total Ratings.
1	1,575	31	1,606
2	953	238	1,191
3	1,273	400	1,673
4	668	857	1,525
5	73	2,190	2,263
6	....	415	415
Multiple ratings	1,312	104	1,416
Totals	5,854	4,235	10,089

"'The total number of railway freight stations in the United States, Canada and Mexico, to which freight shipments can be billed from Pittsburg, Pa., is approximately 89,425, multiplied by 10,089 (number of various ratable articles that can be handled by freight) equals 902,208,825, the total number of ratings covering all classes of freight articles for which tariffs are filed by the carriers with the Interstate Commerce Commission.

"'There are approximately 4,346 freight stations on eighty-nine railroads in the State of Pennsylvania from which freight rates are published and filed with the Commission, to all the other 85,079 freight stations in the United States, outside of Pennsylvania, Canada and Mexico; therefore, 85,079 multiplied by 4,346, multiplied by 10,089 (freight ratings), multiplied by two (both directions) equals 7,460,882,773,452, the total number of freight ratings from all stations in Pennsylvania to all other destinations outside of Pennsylvania, in both directions, for which there are tariffs filed by the carriers with the Interstate Commerce Commission, and from which tariffs any one of these total ratings can be ascertained.

"'These figures represent only a small proportion of all freight ratings and passenger fares, for the reason that all rates to and from other points outside of Pittsburgh, as well as outside of Pennsylvania, are, vice versa, applicable to all shipping destinations in the United States, Canada and Mexico. (Canada has 8,645 stations, and Mexico 4,940, which are included in the above calculations.)

"'One railroad operating out of Pittsburgh advises that during a recent year its tariff and traffic departments prepared detailed figures covering all freight ratings for all stations on its line, which comprised a supply of 5,448,110 leaflets, pamphlets and booklets (originals and duplicates, containing 57,323,706 pages of rates), for distribution to all agents, shippers, consignees, etc., and for filing with the Interstate Commerce Commission. The total weight of this output of tariffs for that year amounted to 333,859 pounds, equal to 167 tons. This is only one railroad.

"'These figures, so far as Pittsburgh and the State of Pennsylvania are concerned, readily show the stupendous undertaking imposed on all carriers in each State of the Union in the preparation and filing of detailed tariffs showing every passenger and freight rate and multiples and combinations thereof.

"'During 1912—the last year for which we have the Commission's annual report at hand—there were 6,550 complaints received and docketed by the Commission, during which period 3,096 rulings were issued. The Commission also conducted 1,154 hearings throughout the country, in the course of which approximately 125,000 pages of testimony were taken, relating to car service charges, absorption of switching, privileges or facilities affecting the value of service wherever in operation, demurrage charges, terminal allowances, carload weighing, bills of lading, individual freight cars, hours of service, examination of accounts, safety appliances, investigation of accidents, inspection of locomotive boilers, ash-pans, etc. In 1911 there were 2,179 steam railroads reporting to the Commission, whose jurisdiction also extends over interstate water carriers, electric railways, express companies, pipe lines, sleeping car companies, telephone, telegraph and cable companies—all of which carriers filed in that year an aggregate of 108,766 single copies of separate, original tariff publications of from 1 to more than 1,000 pages each.

"'The duties of the Commission in the realm of accounting devolve upon the Division of Carriers' Accounts, a force of examiners being constantly engaged in examining the books and accounts of the carriers to determine whether or not they are being kept in the manner prescribed by the Commission. The reports of these examiners are very voluminous and are supposed to be passed upon by the Commission. The accounting rules have recently been revised, and on July 1, 1914, these new classifications will take effect, the changes necessitating close scrutiny of the accounts of carriers for some time, and numerous questions will be asked for rulings which will require careful consideration and a great deal of the Commission's time.

"'The monthly and annual reports filed by the carriers require a vast amount of labor in the verification and compilation of the data and the results published in the annual reports of the Commission to Congress. Numerous special reports on a variety of matters are required in special investigations, and the results must be likewise passed upon by the Commission.

"'The magnitude of the task of carrying out the provisions of the Federal valuation law is sufficient to keep the Commission engaged for a period of five to seven years. While the preliminary work of preparing forms and establishing methods for the prosecution of the work has been delegated to Hon. Charles A. Prouty, a former Commissioner, all matters pertaining to this subject must be passed upon by the Commission and rulings issued under its order.

"'In order to comply with the comprehensive terms of the Interstate Commerce act and amendments it is imperatively necessary that the Commission have complete knowledge of all the conditions and requirements of shippers and carriers, to enable that body to decide what may be adopted as useful and practicable regulations and policies, in accordance with the established authority vested in the Commission. Compliance on the part of all carriers has entailed upon them unprecedented labor and expense; and when it is realized that the Commission is required to give attention to all passenger and freight tariffs and promulgate rulings applicable to all these and numerous other matters coming within its jurisdiction, it will indicate the magnitude of the immense burden imposed upon the Interstate Commerce Commission in undertaking the task of regulating transportation service throughout the United States.'"

THE NUMBER OF WORKERS IN GAINFUL OCCUPATIONS IN THE UNITED STATES

IN all study of the problems of society, one of the most essential facts to know is the number of persons who are workers, whether for wages or for salaries. Yet this fact is one of the most difficult to ascertain for all countries. The statistics are usually for periods considerably behind the present, and an element of doubt and conjecture must always enter into calculations of the

present situation. This has been abundantly shown, wherever efforts have been made, in advance of legislation, to ascertain the number of persons likely to be included in any system of workmen's compensation or other form of social insurance. None the less, every issue of fresh data on the subject for any country is important, as such data give a new point of departure for all calculations. Therefore, the figures just given out by the United States Bureau of the Census as to the workers in gainful occupations disclosed by the Census of 1910, are of great value, despite the fact that they represent a state of things now almost four years old. The statistics have been compiled under the supervision of William C. Hunt, Chief Statistician for Population, and were issued this week by William J. Harris, Director of the Bureau of the Census. The following is the summary of the figures, as published by the New York "Evening Post":

* * *

At the Thirteenth Census (1910) there were 38,756,223 persons ten years of age and over, engaged in gainful occupations in the United States, including Alaska, Hawaii, Porto Rico, and the military and naval stations abroad. The gainful workers thus formed 41.5 per cent of the total population (93,402,151) enumerated at that census.

In Continental United States alone the gainful workers numbered 38,167,336, which was 41.5 per cent of the total population (91,972,266) and 53.3 per cent of the population ten years of age and over (71,580,270). In the male population the gainful workers numbered 30,091,564, which was 63.6 per cent of all males and 81.3 per cent of the males ten years of age and over. In the female population the gainful workers numbered 8,075,772, which was 18.1 per cent of all females and 23.4 per cent of the females ten years of age and over.

Thus, in the total population of the United States, over two-fifths of all persons, considerably over three-fifths of all the males, but considerably less than one-fifth of all the females, were engaged in gainful occupations in 1910; and in the population ten years of age and over, more than one-half of all persons, over four-fifths of the males, but less than one-fourth of the females, were gainfully occupied. In other words, of all persons ten years of age and over, in 1910, more than every other one had a gainful occupation; of the males, over four out of five were gainful workers, and of the females, almost one out of four was a gainful worker.

The proportion of the total population engaged in gainful occupations increased gradually from 34.7 per cent in 1880 to 41.5 per cent in 1910, the increase being least rapid from 1890 to 1900, and most rapid from 1900 to 1910. Of the male population, the proportion engaged in gainful occupations increased from 57.8 per cent in 1880 to 63.6 per cent in 1910, while of the female population, the proportion increased during the same period from 10.7 to 18.1 per cent.

The proportion of the population ten years of age and over engaged in gainful occupations increased from 47.3 per cent in 1880 to 53.3 per cent in 1910, the increase being least rapid from 1890 to 1900, and most rapid from 1900 to 1910. In the male population ten years of age and over the proportion gainfully occupied increased gradually from 78.7 per cent in 1880 to 81.3 per cent in 1910, while the proportion of gainful workers in the female population ten years of age and over increased from 14.7 to 23.4 per cent.

In the several States the proportion of the population ten years of age and over engaged in gainful occupations in 1910 ranged from 46.9 per cent in Iowa to 68 per cent in Mississippi. The States having the smallest proportions were Iowa, 46.9 per cent; Kansas, 47 per cent; Nebraska, 47.7 per cent; Utah, 47.9 per cent, and Indiana, 48 per cent. The States having the largest proportions were North Carolina, 60 per cent; Georgia, 61.5 per cent; Wyoming, 62.6 per cent; Nevada, 64.3 per cent; Alabama, 64.7 per cent; South Carolina, 67.6 per cent and Mississippi, 68 per cent. Except in three States—Arizona, Montana, and North Dakota—there was an increase from 1900 to 1910 in the proportion of the population ten years of age and over engaged in gainful occupations. The States showing the largest increases were Alabama, Arkansas, Georgia, Mississippi, Nevada, North Carolina, South Carolina, and Texas.

Practically one-third (33.2 per cent) of all gainful workers in the United States in 1910 were engaged in agriculture, forestry, and animal husbandry, and considerably more than one-fourth (27.9 per cent) were engaged in manufacturing and mechanical industries. Thus over three-fifths of all gainful workers were occupied in these two general divisions of occupations.

The remaining two-fifths of the workers were distributed among the other seven large classes of occupations, namely, extraction of minerals, transportation, trade, public service, professional service, domestic and personal service, and clerical occupations, no class furnishing employment to as many as 10 per cent of all gainful workers. For the males, as for both sexes combined, agriculture, forestry, and animal husbandry gave employment to the largest proportion of the gainful workers, 36.1 per cent., and manufacturing and mechanical industries ranked second, with 29.4 per cent. Domestic and personal service was the principal field of employment for female workers in 1910, 31.3 per cent of them being engaged in this branch of occupations, as compared with 22.4 per cent in agriculture, forestry and animal husbandry, and 22.5 per cent in manufacturing and mechanical industries.

There were 30,091,564 males engaged in gainful occupations in Continental United States in 1910, as compared with 8,075,772 females; that is, of a total of 38,167,336 persons engaged in all occupations in 1910, 78.8 per cent were males and 21.2 per cent were females. Of a total of 29,073,233 persons engaged in all occupations in 1900, 81.7 per cent were males and 18.3 per cent were females.

Agricultural Workers.

In 1910 there were employed in agriculture, forestry, and animal husbandry, 10.8517,702 males and 1,807,501 females; in the extraction of minerals, 963,730 males and 1,094 females; in manufacturing and mechanical industries, 8,837,901 males and 1,820,980 females; in transportation, 2.531,075 males and 106,596 females; in trade, 3,146,582 males and 468,088 females; in public service, 445,733 males and 13,558 females; in professional service, 929,684 males and 733,885 females; in domestic and personal service, 1,241,328 males and 2,530,846 females, and in clerical occupations, 1,143,829 males and 593,224 females.

These figures show that in 1910 domestic and personal service was the only general division of occupations in which the women outnumbered the men, there being in this general division more than two women employed to each man. In professional service there were four women employed for every five men, a large proportion of the women being teachers. In clerical occupations one-third of the persons were women; in manufacturing and mechanical industries women constituted one in six; in agriculture, forestry, and animal husbandry, one in seven, and in trade one in eight of the gainful workers. Women constituted only 4 per cent of the persons engaged in transportation, 3 per cent of those engaged in public service, and one-tenth of 1 per cent of those engaged in the extraction of minerals.

INDUSTRY, COMMERCE AND FINANCE

Crop Conditions on July 1.—The Crop Reporting Board of the Department of Agriculture makes the following estimates as of July 1, of acreage and condition of crops in the United States:

	Acreage, 1914		Condition			
Crop.	Per Cent of 1913.	Acres.	July 1, 1914.	July 1, 1913.	July 1 10-yr. Av.	June 1, 1914.
Winter wheat	111.6	35,387,000	94.1	81.6	80.2	92.7
Spring wheat	97.3	17,990,000	92.1	73.8	84.4	95.5
All wheat	106.4	53,377,000	93.4	78.6	81.7	93.7
Corn	99.3	105,067,000	85.8	86.9	84.7	...
Oats	100.0	38,383,000	84.5	76.3	83.7	89.5
Barley	100.4	7,528,000	92.6	76.6	84.4	95.5
Rye	....	.....	92.9	88.6	83.5	93.6
White potatoes	101.1	3,708,000	83.6	86.2	88.7	...
Sweet potatoes	94.9	593,000	77.1	86.5	87.3	...
Tobacco	94.6	1,151,000	66.0	82.8	84.6	...
Flax	84.1	1,927,000	90.5	82.0	86.8	...
Rice	85.2	704,800	86.5	88.4	88.0	...
Hay	....	.....	80.8	80.5	*81.9	88.7
Apples	....	.....	64.2	59.4	59.4	73.7

*Six-year average.

The amount of wheat remaining on farms July 1 is estimated at 4.2 per cent of last year's crop, or about 32,236,000 bushels, as compared with 35,515,000 on July 1, 1913, and 23,876,000 on July 1, 1912.

The estimated yields indicated by the condition of crops on July 1, 1914, and final yields in preceding years (bushels per acre and millions of bushels of total production), follow:

	Yield Per Acre			Total Production of Bushels				
			1909-1913	1914				1909-1913
Crop.	*1914. Bus.	1913 Final. Bus.	Av'ge. Bus.	July Fore-cast.	June Fore-cast.	1913 Final.	1909-1913 Av'ge.	Cen-sus.
Winter wheat	18.5	16.5	15.6	655	638	523	441	418
Spring wheat	15.3	13.0	13.3	275	262	240	245	265
All wheat	17.4	15.2	14.7	930	900	763	686	633
Corn	27.3	23.1	25.9	2,838	...	2,447	2,708	2,552
Oats	31.3	29.2	30.6	1,201	1,216	1,122	1,131	1,007

Rubber a Possible By-Product of Steel.—At a recent meeting of the Iron and Steel Institute in London, the president read a paper on by-products in steel manufacture. He discussed the utilization of blast furnace gases for operating gas engines and for illumination and heating, and the later developments in making nitric acid from these gases, and also, the manufacture of bricks and cement from slags. All these matters have been under discussion for a number of years, but a new idea was presented at this meeting looking toward the synthetic production of india rubber from coke oven gases. The president's words were: "It was being sought to obtain from it the hydrocarbons, the derivatives of which were found in india rubber, and experiments that had been made permitted the foreshadowing of the manufacture of artificial rubber."

Live Stock Prices in the United States.—The level of prices paid to producers of the United States for meat animals decreased 1.0 per cent during the month from May 15 to June 15; this compares with an increase of 1.6 per cent in the price level from May 15 to June 15 last year, a decrease of 2.0 per cent two years ago, a decrease of 1.7 per cent three years ago, and a decrease of 1.1 per cent four years ago, from May 15 to June 15. In the six months, from December 15 to June 15, the level of prices for meat animals advanced 5.4 per cent; this compares with an advance of 12.0 per cent during like period a year ago, an advance of 16.8 per cent two years ago, and decline of 12.3 per cent three years ago, from December 15 to June 15. On June 15 the average (weighted) price of meat animals—hogs, cattle, sheep and chickens—was $7.22 per 100 pounds, compared with $7.19 on June 15 a year ago, $6.27 two years ago, $5.45 three years ago and $7.29 four years ago. Average prices to producers in the United States for various products are given below:

	June 15, 1914.	May 15, 1914.	June 15, 1913.	June 15, 1912.
Horses, each	136.00	139.00	146.00	145.00
Milch cows, each	59.82	59.85	55.20	45.84
Hogs, 100 pounds	7.43	7.60	7.61	6.65
Beef Cattle, 100 pounds	6.32	6.33	6.02	5.23
Veal Calves, 100 pounds	7.69	7.59	7.53	6.33
Sheep, 100 pounds	4.70	4.87	4.84	4.52
Lambs, 100 pounds	6.47	6.49	6.36	6.02
Wool, per pound	.184	.172	.156	.187

Comparative Growth in Agriculture and Trade.—A recently issued British Board of Trade return gave detailed figures showing the comparative development in agriculture and in trade between 1903 and 1913 in the United Kingdom, Germany, and the United States. As presented by that official body the per cent of increase along certain lines in the three countries named during the twenty-year period mentioned was:

	Per Cent of Increase Over 1893.		
Item.	United Kingdom.	Germany.	United States.
1 Cultivated area under principal crops	* 9	8	47
2 Crops:			
Barley	*24	44	182
Oats	* 2	80	154

New Bulgarian Loan.—It is announced that the negotiations between the group of Austro-Hungarian and German bankers and the Bulgarian Government with respect to a loan have been concluded, and that the group will furnish to Bulgaria a loan of 500,000,000 francs ($96,500,000) to be covered by a 5 per cent bond issue, which is to be marketed at 80 to 85. Half of the loan will be available immediately, of which German banks will supply 200,000,000 francs and Austro-Hungarian banks 50,000,000 francs. Details of the second half of the loan will be arranged subsequently. It is stated that the Bulgarian Government undertakes to give preference to German and Austro-Hungarian firms in placing orders for public works and material for public undertakings.

World Production of Raw Silk.—The union of the raw silk merchants of Lyon, France, has made public the provisional statistics for the production of raw silk throughout the world for the

year 1913; these, together with the provisional figures for 1912, are given below:

Countries.	Production in Pounds— 1912.	1913.
Western Europe:		
France	1,113,334	772,000
Italy	9,049,975	7,804,000
Spain	171,961	181,000
Austria-Hungary	665,796	580,000
Totals	11,001,066	9,337,000
Levant and Central Asia:		
Asiatic Turkey:		
Anatolia	936,965	904,000
Syria and Cyprus	881,849	1,080,000
Other provinces	264,555	287,000
European Turkey—Adrianople	573,202	187,000
Balkans—Bulgaria, Servia, Rumania	319,670	276,000
Greece, Salonika and Crete	110,231	463,000
Caucasus	870,826	849,000
Turkestan and Central Asia (exports)	617,294	496,000
Persia (exports)	496,040	463,000
Totals	5,070,632	5,005,000
Extreme Orient:		
China:		
Exports from Shanghai (including tussahs, yarns, etc.	14,100,583	12,787,000
Exports from Canton (including shipments to Bombay and India)	4,971,423	6,120,000
Japan—Exports from Yokohama	23,413,087	26,125,000
East Indies—Exports from Bengal and Kashmir	352,740	220,000
Indo-China—Exports from Saigon, Haifong, etc.	33,069	33,000
Totals	42,879,902	45,234,000
Grand totals, provisional	58,951,600	59,636,000
Grand total, corrected	59,448,000	.....

‡Includes Salonika. †Exclusive of Salonika.

It will be seen from the foregoing table that the 1913 production is slightly in excess of the corrected total for 1912, which was the greatest ever recorded.

* * *

Lyon's Output of Silk Goods.—The Chamber of Commerce of Lyon, France, with the concurrence of the Syndical Chambers of Silk Merchants and Silk Buyers, has just published statistics concerning the production of silk fabrics in Lyon, during the year 1913, which shows that the value of such production was $90,266,100, while the output in 1912 was $79,516,000, an increase of $10,750,000. The items forming these totals were:

Articles.	1912.	1913.
Fabrics of pure silk or waste silk:		
Plain	$25,167,200	$27,541,100
Fancy and brocaded	5,886,500	7,237,500
Fabrics of silk or waste silk mixed with gold or silver for the Levant and the East Indies	2,316,000	1,930,000
Fabrics of mixed silk or waste silk:		
Plain	10,267,600	11,811,600
Fancy or brocaded	1,582,600	1,775,600
Velvets and plushes:		
Pure silk	1,436,100	2,045,800
Mixed silk	5,553,400	5,770,700
Muslins, gauzes and crêpes	16,694,500	19,879,000
Fabrics of coarse silk for upholstery	212,300	212,300
Total of fabrics of pure and mixed silk of all kinds	$69,171,200	$78,203,600
Fabrics of artificial silk	386,000	772,000
Veilings and laces	4,554,800	5,597,000
Metal trimmings, laces, etc	4,439,000	4,439,000
Textile trimmings	386,000	289,500
Miscellaneous fabrics not specified elsewhere, containing textiles other than silk	579,000	965,000
Grand totals	$79,516,000	$90,266,100

The aggregate value of silk goods (exclusive of postal parcels) exported from France during 1913 was $72,311,503. The fact that the value of the silk fabrics produced in Lyon during the same period exceeds the total value of the exports from all France by $17,954,597 is significant as showing the importance of Lyon as a silk-manufacturing center. This excess is consumed in France. During the year 1913, the value of the imports of silks into France amounted to $9,349,885. This sum added to the amount of the excess of silk goods produced in Lyon over the amount of the exports from France during the year, or a total of $27,304,482, represents, it is said at the Chamber of Commerce, approximately the amount consumed in the Republic.

* * *

Suez Canal Traffic.—The Egyptian Government has published the official figures for 1913 of the shipping which passed through the Suez Canal. Statistics concerning the commerce of the chief competing countries in the Suez Canal traffic follow, the increase or decrease on the corresponding figures for 1912 having been calculated in each case:

Flag.	No. of Vessels. Total.	Increase (+) or Decrease (—).	Canal Tonnage— Total.	Increase (+) or Decrease (—).	Pass'gers Carr'd. Total.	Increase (+) or Decrease (—).
British	2,951	—387	12,172,817	—963,486	139,512	— 6,763
German	778	+ 82	3,364,585	+334,774	31,791	+ 507
Dutch	342	- 1	1,290,736	+ 52,799	18,362	+ 2,781
French	256	+ 35	931,128	+129,385	36,923	+ 8,177
Austro-Hungarian	246	— 1	849,168	+ 35,530	7,491	+ 1,764
Russia	110	— 16	341,941	— 24,746	12,098	— 5,954
Totals, including all other flags	5,085	—287	20,214,856	—320,570	289,631	+29,020

In number of vessels and canal tonnage the various nationalities held in 1913 the same relative positions as in 1912, save that in the earlier year Austria-Hungary outranked France in both particulars. As to passengers, the order in 1913 was, as the above figures show, United Kingdom, France, Germany, Netherlands, Russia, and Austria-Hungary. In 1912 the order was United Kingdom, Germany, France, Russia, Netherlands, and Austria-Hungary.

* * *

The Trade of Chile.—Imports into Chile in 1913 were valued at $120,296,510 as against $122,075,994 in 1912. Exports in 1913 were valued at $144,653,312 as against $137,643,153. In computing the total foreign trade, therefore, a decline of $1,779,484 in imports is more than offset by an increase of $7,010,159 in exports. Of the imports in 1912, the United Kingdom furnished to the value of $36,028,311; Germany, $29,579,180; the United States, $20,090,266, and France, $6,623,252. As compared with the previous year, the United States gained $3,283,925; Germany lost $3,609,890; the United Kingdom lost $2,570,972, and France lost, $637,809. Exports from Chile to the United States in 1913, as invoiced at the American consulates and agencies in Chile, were valued at $38,386,959, an increase of $7,530,578 as compared with 1912, and $26,612,390 as compared with 1911.

* * *

Bavaria's Exports to the United States.—Exports from Bavaria to the United States have increased in the last three years by about half a million dollars annually. Articles invoiced for export to the United States, at the United States consulate general in Munich, were valued at $2,568,851 in 1913, as compared with $2,187,072 in 1912. These figures include returned American goods valued at $11,908 in 1912, and $3,992 in 1913, and exports to the Philippines of $5,303 in 1912, and $1,665 in 1913, and to Hawaii of $300 in 1913. There were no other exports in these years to the island possessions of the United States.

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

MR. EDSON S. LOTT, President of the United States Casualty Company, is an impetuous man; he is perhaps over-fond of emphasis and at times he fails to make his contentions prevail, in spite of being right in them, because his statement of them lacks the authority of sobriety. None the less he has the refreshing quality of not being afraid to speak his mind and of valuing the politic less than the straight utterance of his thought. It is now rather generally held among the managers of liability insurance in New York that expediency demands that no sharp criticism should be passed upon the sayings and doings of the new Workmen's Compensation Commission. To irritate them and their partisans, it is urged, might lead to a remodeling of the New York Workmen's Compensation Statute in such wise as to exclude private insurance carriers altogether, and leave the Commission, with its State Fund, in sole possession of the field. Mr. Lott is evidently not of a mind to submit meekly to those dictates of calculating prudence, but is ready to take the responsibility of assuming that even the president of a liability insurance company, in these days when it is fashionable to class liability insurance companies with the predatory corporations, may call to account such public officials as the Workmen's Compensation Commissioners, when they are guilty of unjustifiable actions or utterances. During the past week, Mr. Lott has sharply and, in our opinion, very justly chidden the Workmen's Compensation Commission for having adopted and disseminated among employers a resolution which is the veriest nonsense from a legal point of view, but which is calculated to mislead employers into thinking that insurance taken by them with the State Fund embraces matters which it does not at all embrace. The obscurity and slovenliness of workmanship of the New York Compensation Act have more than once been mentioned in the pages of this paper; and one of the consequences of this obscurity and this slovenliness is that in a multitude of cases it is impossible, in advance of interpretation of the statute by the courts, for the employer to know whether all or certain of his employes are embraced within the compensation system. The State Fund has the power, under the statute, to cover only the liability of the employer as regards such employes as are in the final determination found to be within the "hazardous" classes of the law. In respect of all other employes, the policy of insurance issued by the State Fund is a mere piece of paper, with no legal worth at all. It does not protect the insured against common law suits, in case of accident to these non-included employes; and any premium the employer may have paid on this account is merely so much money thrown away. But the Workmen's Compensation Commission, fearing that the State Fund may lose applicants for insurance because of this uncertainty,—employers preferring to take out policies with stock liability companies, which cover in either case,—has passed a resolution, utterly *ultra vires*, to the effect that the insurance of employes with the State Fund, even though all or some of these employes be found subsequently not to be included within the "hazardous" industries of the Compensation Act, none the less relieves the employer of the danger of a suit at common law, in case of an accident to such an employe. Against this contention of the Commission Mr. Lott has directed his righteous wrath, and with perfect legal propriety. All that he said cannot be quoted here, but a single paragraph, excellent for its direct force and legal soundness, contains the meat of it. This is the paragraph:

"By what authority, pray, was the Workmen's Compensation Commission constituted a court of final jurisdiction in the State of New York? What is there in the compensation law which deprives an employe of his common law right to sue for damages in case he does not do work included in any of the forty-two 'hazardous' employments? Evidently, the Commission thinks that—unlike other administrative bodies—it has been given both judicial and legislative functions. The crucial question is the kind of work done by the employe. That determines the employe's rights. The Commission cannot 'resolve' such rights away. The State Insurance Fund's policy cannot deny such rights. The employer is not protected against such rights either by the State Fund's insurance contract or by the State Workmen's Compensation Commission's resolution. The courts have the final say. And, until the courts have spoken, the employer who insures against compensation liability in the State Fund is not released from common law liability to such of his employes as do not come within the compensation law."

APART from the severe losses incurred by most of the fire insurance companies in the recent conflagration at Salem, Mass., one of the most interesting features of that calamity, from a fire insurance point of view, has been the subjecting of the so-called factory mutual fire insurance associations to the consequences of a disaster not embraced within their normal average, as commonly calculated, at least by those factory owners who are attracted to them by the alluring cheapness of the fire insurance they afford. The great Naumkeag cotton mills, situated in Salem and insured in some eleven of the factory mutuals, proved as little able to resist the conflagration as the more carelessly protected buildings in the town. They were consumed, and the aggregate loss was no less than $3,328,547 for the eleven associations. As the aggregate surplus of these associations, built up through years of business, was but $7,428,282, it is evident that the real cost of insurance with them must take a sudden jump and remain for some time to come several times as high as it has been. It appears, then, that there is an unsuspected offset to the remarkable results apparently attained by the factory mutuals through their selection of risks distinguished by superiority of construction, fire prevention provisions, etc. The moral is that in fire insurance severe selection is only part of the problem. It must be associated with a wide average, unless great discomforts and disillusionments on the part of the insured are to be experienced from time to time.

Workmen's Accident Experience in Austria

IN the issue of THE MARKET WORLD AND CHRONICLE for May 9, 1914, there was published a study of the latest statistics of workmen's compensation in Austria, including the financial results of the year 1912. Reference was also made, in an editorial in the same issue, to the statistical results of the Austrian accident experience for the years 1897 to 1901, which the State Insurance Department of New York had unhappily just taken as one of the bases of its calculation of the minimum premium cost required by the new Workmen's Compensation Act of New York. Official statistics of the accident experience in Austria for the year 1911 have just been issued by the Government of that country, and, as was to be expected, prove to depart widely, and in the direction of a large increase of compensated accidents, from the earlier statistics. The figures have appeared in the Austrian "Official Reports (Amtliche Nachrichten)," and are summarized in a recent issue of the Vienna insurance journal, "Der National-Oekonom." The following is a translation of what the latter publication has to say upon the subject:

* * *

At the end of the year 1911, the seven workmen's accident insurance institutions in Austria had a deficit of 66,770,544 kronen [krone=20.3 cents]. At the end of 1912 there had been brought about a reduction of this deficit to 62,021,330 kronen. The unfavorable experience of earlier years had been the result of too low premium rates, or, perhaps better, of the over-numerous and excessive claims upon the insurance on the part of injured workers.

The "Official Reports (Amtliche Nachrichten)" now publish the statistics of the accidents with which the accident insurance institutions had to deal in 1911; and these statistics illustrate clearly how the deficit came about through the continuous increase in the number of cases of slight disability. The following table shows the number of the insured workers in 1911, their aggregate wages for the year and their average annual wage:

Character of Enterprises.	No. of Enterprises.	No. of Workers.	Equivalent No. of of Full-time Workers.	Aggregate Wages Earned (Kronen).	Av'ge Wage Per Worker (Kronen).
Industrial and commercial	132.878	2.436.250	2,086,860	2.182.316,443	1.046
Agricultural	482.837	1.580,631	46.263	21,048.966	458

The number of the insured workers increased by 114,290 in 1911 as compared with 1910; and there was an increase for the year in aggregate wages earned of about 160,000,000 kronen. The number of accidents reported, on the other hand, increased only slightly. In 1911, the accidents reported for every 10,000 full-time workers were 636.6, as compared with 634.5 in 1910; with 662.8 in 1909; and with 631.9 in 1908. The following table shows the proportion between the number of reported accidents and the number of those compensated by the several insurance institutions in 1911, as well as the number of reported accidents per 10,000 full-time workers in 1910, 1909, 1900 and 1890:

ACCIDENTS REPORTED AND ACCIDENTS COMPENSATED IN AUSTRIA, PER 10,000 FULL-TIME WORKERS.

Insurance Institution.	Accidents in 1911 Per 10,000 Full-time Workers Resulting in Death.	Disability.	Number of Reported Accidents Per 10,000 Full-time Workers 1911.	1910.	1909.	1900.	1890.
Vienna	3.9	184.8	825.9	862.9	890.2	994.8	331.6
Salzburg	8.3	151.0	409.5	396.3	376.7	382.3	185 3
Prague	4.4	140.1	367.7	372 3	372.0	322.4	131.1
Brünn	5.3	172.2	594.8	554.1	594.9	504.8	158.1
Gratz	8.7	235.9	896.6	942.8	983.8	671.8	352.1
Trieste	5.8	175.6	640.5	663.5	820.4	6.7.3	252.1
Lemberg	9.4	88.6	271.3	347.3	339.0	302.3	99.0
Railroads	9.1	184.8	1,148.8	1,072.8	1,112.2	519.4	488.5
Average for 1911	5.9	164.0	636.6	634.5	662.8	550.7	194.9
Average for 1910	5.9	166.0					
Av'ge for 1901-1910	6.4	168.4					
Av'ge for 1891-1901	6.9	127.4					
Average for 1890	6.7	75.2					

The fact that stands out particularly in the above table is the important general increase that has taken place in the number of the reported accidents. Briefly, this increase and the accompanying increase in the number of compensated accidents are shown to have been as follows:

	1890.	1900.	1910.	1911.
Reported accidents per 10,000 full-time workers	194.9	550.7	634.5	636.6
Compensated accidents per 10,000 full-time workers	81.9	157.5	171.9	169.9
Per cent of compensated to reported accidents	42%	29%	27.1%	26.7%

Although the year 1911 shows more than twice the number of workers (i.e., per 10,000 full-time workers) receiving compensation than did the year 1890, even this increase fell numerically far behind that of the reported accidents. Especially does the Vienna accident insurance institution show most unfortunate results in this latter regard. There every sixteenth worker reported an accident in 1911, and compensation was awarded to 1.7 per cent of all workers.* Particularly striking is the very large number of industrial disabilities shown by the Vienna institution, though it is important to note that the disability for which compensation is awarded is for less than one-third of the worker's earning ability in 84.9 per cent of the cases, while total disability is found in only 1.3 per cent of the cases. The proportion of the different degrees of disability for each of the accident insurance institutions in 1911 is shown in the following table:

PERCENTAGE OF DEGREES OF DISABILITY TO TOTAL DISABILITY CASES.

Institution.	0 to 1-6	1-6 to 1-3	1-3 to 1-2	1-2 to 2-3	2-3 to 5-6	5-6 to Total.
Vienna	61.1	23.8	6.3	3.0	4.5	1.8
Salzburg	36.5	32.6	10.0	6.6	10.2	4.1
Prague	40.7	32.5	11.8	5.0	6.5	3.1
Brünn	47.2	30.2	9.0	5.3	6.8	1.5
Gratz	40.3	35.3	11.9	3.1	7.3	2.1
Trieste	43.8	24.8	13.2	7.7	6.0	4.5
Lemberg	22.7	36.6	20.5	8.1	11.1	1.0
Railroads	12.7	29.3	18.1	11.0	16.1	12.8
All institutions, 1911	41.8	29.7	11.4	5.6	7.7	3.8
All institutions, 1910	41.3	30.4	11.2	4.8	7.9	4.4
All institutions, 1905-1909	41.3	29.3	11.3	5.6	8.0	4.5
All institutions, 1904	68.2		11.7	6.7	8.9	4.5

In 1911, the Vienna accident insurance institution expended 82.2 per cent of its entire income for compensation payments and costs and for amounts transferred to reserves. The Prague institution expended but 65 per cent of its total income for these purposes. Naturally the costs of administration are in addition to these expenditures. The highest cost of administration in 1911 was found at the Lemberg and at the Vienna institution. Per

*[It must be borne in mind that in Austria the Sickness Insurance Funds must care for the treatment and compensation of injured workers for the first four weeks after the accident. Hence compensation proper is paid only in cases where the injury is severe enough to persist more than four weeks.—Editor.]

insured worker in a gainful occupation, the cost of administration in 1911 was as follows for the several institutions: Vienna, 2.78 kronen; Salzburg, 1.50 kronen; Prague, 2.02 kronen; Brünn, 1.81 kronen; Gratz, 2.29 kronen; Trieste, 2.38 kronen; Lemberg, 3.71 kronen; Railroads, 3.64 kronen. It is extremely interesting to observe the shift that has taken place in the proportion of compensation payments and of payments into reserves, as well as the creeping-up of the administration costs, in Austrian workmen's accident insurance, since the earlier years of the insurance. The following brief table will illustrate these points:

PERCENTAGES OF COMPENSATION PAYMENTS AND PAYMENTS INTO RESERVES TO TOTAL INSURANCE ASSESSMENTS.

	1911.	1910.	1905.	1900.	1895.	1891.
Compensation payments	59.4	60.3	66.6	50.2	32.7	15.3
Payments into reserves.....	29.0	32.2	67.5	63.8	77.8	79.8

GENERAL COSTS OF ADMINISTRATION.

Per capital of insured workers in gainful occupations (kronen)	2.45	2.37	1.84	1.45	1.08	0.90

These figures show plainly that the premiums assessed, despite their sharp increase, are insufficient to meet the real cost of the insurance, although the pensions awarded by the insurance institutions to the injured workers or their beneficiaries are of the scantiest kind. During 1911, the territorial insurance institutions paid on the average but 154.2 kronen as a pension to a permanently disabled worker, but 177.6 kronen to a widow and but 123.2 kronen to an orphaned child. If, in spite of this, such great sums of money were expended in the aggregate, the cause is to be sought in the pensions paid after accidents which result in a lessening of earning power of less than one-third. Not less than 71.7 per cent of all cases of disability fall in this category.

The following table exhibits the distribution of the disability pensions paid in 1911 (both on new and on old awards), according to the degrees of disability of those receiving them; also the pensions paid to widows, dependent children and ascendants:

DISTRIBUTION OF DISABILITY PENSIONS, WIDOWS' AND ORPHANS' PENSIONS.

	Seven Territorial Institutions.			Railways —Accident Association—		
Degree of Disability.	Persons.	Aggregate Pensions, kronen.	Av'ge Per Capita Pension, kronen.	Persons.	Aggregate Pensions, kronen.	Av'ge Per Capita Pension, kronen.
0—1-6.....	36,232	2,467,293	68	825	98,974	120
1-6—1-3.....	23,116	3,592,907	138	2,303	646,634	281
1-3—1-2.....	9,806	2,180,836	222	1,720	920,364	535
1-2—2-3.....	4,746	1,426,424	301	1,096	767,483	700
2-3—5-6.....	6,809	2,401,085	353	1,908	1,730,505	907
5-6—total.....	2,644	1,246,772	472	1,906	2,527,500	1,326
Totals	86,353	13,315,317	154	9,758	6,691,460	686
Widows' pensions	8,100	1,438,954	178	3,370	1,357,227	403
Orphans' pensions	9,156	1,127,763	123	4,240	1,069,543	252
Ascendants' pensions	706	98,727	140	257	64,408	251
Grand total ..	104,315	15,980,761	153	17,625	9,182,638	206

In the above table we have purposely given the figures for the Railways Accident Association separately, for the reason that the workers insured with this association make up their minds to leave their places only when they absolutely must do so. A result of this is the small amount of the payments for disabilities under one-third the earning capacity,—these amounting to only 11.1 per cent of the total pension payments to victims of disability, as compared with 45.5 per cent for the territorial institutions. These figures show where the reform must begin in Austrian workingmen's accident insurance. Let the compensation for trifling partial disability be done away with, and, on the other hand, let the pensions be increased for disability to the extent of more than two-thirds the earning capacity. Should this be done, it would be possible to add materially to the pensions in cases of invalidity amounting to from two-thirds to total earning capacity, and at the same time to make very considerable savings in the cost of the workmen's accident insurance.

THE DEVELOPMENT OF VITAL STATISTICS

[Reprinted from the "Post Magazine and Insurance Monitor" of London]

AT the Liverpool University, on the 29th of April, and 6th and 13th of May, a course of three Lectures on Vital Statistics was given by Mr. Joseph Burn, F.I.A., Actuary of the Prudential Assurance Company, under the auspices of the Chadwick Trust. The subjects dealt with on the respective occasions were: (1) The Census as an index to the development of National Life, with a criticism of the methods adopted in its collection and tabulation. (2) The annual reports of the Registrar-General, with special reference to the number and causes of deaths. Indications of the progress of sanitary reform. (3) The preparation of Mortality Tables: (a) National, (b) Municipal, (c) Occupational. Practical uses of mortality tables by medical officers and others.

The following passage from the final lecture may be said to give the key-note to the whole. Said Mr. Burn:

"I commenced this series of lectures by pointing out that I felt that the honour which had been conferred upon me in being asked to deliver them was greatly enhanced by the fact that we have now started on a new era, in which we are able to obtain readily the practical details of the census returns. I am well aware that to the ordinary person this does not seem to be any matter of great importance, and one object of my lectures has been to explain how vital a matter it is to all those who are endeavoring to improve the public health of this great nation. Am I too sanguine in hoping that, now we have all the necessary statistics, there may be at least one person in each important centre who will periodically construct tables of mortality for his own district on some such lines as those which I have described, showing the analysed mortality rates referring to the various principal diseases? If this is done, I am confident that it must have beneficial results. The progress which is being made will be clearly denoted. There will no longer be any excuse for acting in ignorance, since the table will show exactly what is happening, so that all conscientious workers for Sanitary Reform will be able to discover, at once, the direction in which it is most desirable to concentrate attention."

The value of the new system of collection and tabulation of the national statistics was clearly shown by comparing it with those previously in use. The first lecture dealt with the evolution of the census, a brief account of the imperfections of the earliest British censuses and the paucity of the data collected serving to demonstrate the wonderful advance that has since been made, while the result of the twelfth census was aptly described as a monument of foresight and enterprise.

Not the least interesting of the diagrams by which the lectures were throughout illustrated was that representing the populations of the United Kingdom, Germany, France, and England and Wales, at each of the decennial censuses from 1801 down to 1911. The graphs might well be described as National Life Lines. Thus in the case of the United Kingdom it was shown that, although the population had increased with considerable regularity, there was a sudden halt in progress between 1841 and 1851. Here, students of history would at once recognize the results of the disastrous Irish potato famine of 1846. Similarly, the loss of Alsace-Lorraine was recorded on the French graph between 1861 and 1871.

The graph of the German Empire was the most startling of the four. Commencing well below that of France, the populations of

the two countries were about equal between 1861 and 1871, and at the present time that of Germany was shown to be more than 50 per cent higher than that of France. The year 1921, added the lecturer, was likely to see the population of the German Empire nearly equal to that of England and Wales and France combined.

The relative age constitutions of England and Wales, Germany and France were illustrated by ogive curves. For instance, it was was clearly shown that the three millions by which the population of France exceeds that of England and Wales must consist solely of persons aged fifty-three and upwards. A consideration of the median and quartile points led to the conclusion that, so far as youth and strength are concerned, the order of merit is Germany, England, France.

In the second lecture, concerned with the Annual Reports of the Registrar General, an interesting analysis was given of the marriage and birth rates, the lecturer pointing out that the most important question to be considered when dealing with the period of infancy was not how many children were born, but what proportion of children born survived the perils of infancy. In this connection attention was called to the progression during the decennial periods from 1841 to 1911 of the death rate per 1000 living under the age of five years. For 1841-1850 the rate was 66.0 per thousand, rising to 68.6 during the period 1861-1870; since 1870 it had been considerably reduced, the rate for 1911 being only 43.7 per thousand—undoubtedly one of the clearest indications of the triumph of sanitary reform.

Diagrams were submitted showing that scarlet fever had been nearly subjugated, but that strenuous efforts were still required in the warfare against other infantile diseases. Smallpox and enteric fever were also shown to have been practically extirpated since the passing of the Public Health Act in 1875.

A simple explanation was given of crude and standardized death rates, and, in order to emphasize the importance of understanding the distinction between these two terms, Mr. Burn referred to the case of Liverpool, with a crude death rate of 20.2 and a standardized death rate of 20.9, as compared with Clitheroe Rural District, which, although having a crude death rate of 19.8, had a standardized death rate of only 14.3. From a consideration of the crude death rates alone, one might be led to imagine that the rural district of Clitheroe was little healthier than the City of Liverpool; the standardized death rates, however, revealed that whereas the Liverpool death rate was high, Clitheroe on the other hand experienced a rate practically the same as that of the whole of England and Wales. It was, therefore, easy to see that Clitheroe must contain a larger proportion of people who should normally be subject to higher death rates—that is, a larger proportion of very old people or very young people.

This statement of the method of instituting a comparison between the death rates of various localities leads naturally to a consideration of the third and final lecture, on the Preparation of Mortality Tables. The lecturer stated that his object had been to assist all those who were striving for sanitary reform and the improvement of the public health. He believed that the Registrar General, by means of his greatly improved form of statistical returns, had placed in their hands a very powerful instrument which they could not afford to neglect.

A method of constructing mortality tables was described which whilst giving sufficiently correct results, had been made as simple as possible, so as to be readily used by anyone of average knowledge and ability. By this method, mortality tables for Liverpool and England and Wales were constructed for the year 1911, and the resulting rates of mortality, analysed into their component parts, were exhibited in diagrams. Thus, instead of Liverpool having to remain in ignorance of the causes leading to its high standardized death rate, it was in possession of an instrument showing exactly where the excess rate of mortality was situated and the nature of the diseases to which it was due. Year by year they would be able to trace the extent to which the rates of mortality due to various causes were fluctuating, and, not content with partial success, they would progress continuously towards that ideal which should ever be borne in mind, namely, the complete elimination of all preventable disease.

LIFE INSURANCE COMPANIES AND FARM CREDIT

DURING the recent discussions of the subject of farm credit in this country it has been rather noticeable that the attention of the propagandists has been chiefly directed to what is done in foreign countries and very little to what is actually being done in the United States in the way of providing farmers with loaned capital. This is even true of the extensive report of the Rural Credit Commission, which has exhaustively surveyed the provision of land banks and other credit institutions for farmers in Germany, France and other countries abroad, but has made no attempt to obtain complete and exact information about the sources of credit already open to the American farmer. It is probable that most people having any acquaintance with the facts have vaguely known that American life insurance companies have very large amounts of capital loaned out to farmers, but until very recently no attempt has been made to obtain even approximate statistics of such loans.

The Agricultural Commission of the American Bankers' Association, through its chairman, Mr. B. F. Harris, not long since set about getting at least preliminary facts of a trustworthy character in this field. Accordingly, the request was made of twenty-five of the most important life insurance companies in the country that they supply information with regard to the sums they have loaned on farm mortgages. The results of the enquiry have just been published in the "Banker-Farmer," the official organ of the commission. Of the twenty-five companies to which the request for information was directed, seven were found not to loan upon farm mortgages at all, and one company failed to give its figures. Accordingly, the statistics collected are from only seventeen of the nearly 275 life insurance companies doing business in the United States. The farm mortgage figures for these seventeen companies, however, are almost startling, as they show no less than $519,243,588 loaned out by the companies on this form of security. As a great number of the remaining companies are known to loan considerable portions of their resources on farm mortgages, it is probably safe enough to assume that at the present moment over $600,000,000 of American life insurance money is invested in this way.

The "Banker-Farmer" publishes, first, a list of the seventeen companies whose farm mortgage figures it obtained, and, second, a table showing the distribution of the loans made by these companies in forty-two States and in Porto Rico. The aggregate amounts loaned, by companies, are as follows:

FARM MORTGAGE LOANS OF SEVENTEEN LIFE INSURANCE COMPANIES.

Name of Co.	Aggregate Am't Loaned.	Name of Co.	Aggregate Am't Loaned.
Northwestern Mut. Life	$95,723,431	Penn Mutual	$9,534,616
Union Central	73,743,611	Pacific Mutual	7,013,558
Mutual Benefit	71,303,303	Provident Life	4,787,998
Prudential	64,578,840	Fidelity Mutual	2,935,826
Aetna Life	56,838,802	New York Life	2,661,183
John Hancock	38,253,492	Equitable Life	2,398,740
Connecticut Mutual	30,452,925	Manhattan Life	23,100
National Life	26,689,934		
Phoenix Mutual	19,997,040		
Travelers	12,101,289	Total	$519,143,588

Significant from various points of view is the distribution of this great aggregate sum of loans through the various sections of the country. The following table shows the amount loaned in each of forty-two States and in Porto Rico:

State.	Amount.	State.	Amount.
Iowa	$100,119,913	Louisiana	$954,461
Kansas	53,668,695	Alabama	856,404
Missouri	53,667,415	Arkansas	818,129
Nebraska	53,165,368	North Carolina	794,830
Illinois	43,131,733	Oregon	639,451
Indiana	40,686,288	Michigan	508,174
Minnesota	33,078,638	Utah	474,582
Oklahoma	22,536,862	Montana	445,435
Texas	20,325,095	Arizona	411,973
South Dakota	18,934,368	Virginia	181,130
North Dakota	14,629,783	Pennsylvania	102,950
Ohio	14,034,375	New York	90,000
Georgia	10,505,560	New Jersey	62,465
Tennessee	8,428,243	Wyoming	43,200
California	5,861,978	Florida	16,000
Kentucky	5,606,844	Maine	3,500
Mississippi	2,038,879	West Virginia	2,820
Colorado	2,017,028	Vermont	2,475
Idaho	1,696,272		
South Carolina	1,587,222		
Wisconsin	1,398,241	Total for States	$518,938,106
Washington	1,347,287	Porto Rico	145,482
Connecticut	1,220,476		
New Mexico	1,111,994	Grand total	$519,143,588

A glance at the figures in this second table brings out at once the extraordinary disparities in the distribution of this great mass of farm credit. To begin with, New England and the Northeastern States have received virtually none of the fructifying stream, in spite of the fact that they far exceed all other States in the amount of life insurance premiums paid by their citizens. Perhaps the accessibility of savings banks, accustomed to loan on farm mortgages, has had something to do with this, but more potent still has undoubtedly been the long continued depression in the value of Eastern farm lands, making the security less inviting than that afforded by Western States whose farm lands have been continually enhancing in value. None the less, it must be regarded as a genuine hardship to Eastern farmers that even their own premium moneys should be sent West for investment, thus strengthening the hands of the competing farmers whose natural advantages make them most to be feared. It is the group of central prairie States that has been most enriched by the easy accessibility of life insurance money. No doubt, the steady rise in the price of land in those States is largely attributable to this fact. But the Southern States, too, are beginning to get an amount of money for mortgage loans out of all proportion to the relative amounts of life insurance premiums they pay. Here also the security is undoubtedly made attractive by the comparatively low prices of farm lands, and by the marked tendency of these prices to rise,—to say nothing of the prevailing high rate of interest. The investing life insurance companies are better protected with each succeeding year.

The situation as a whole, however, cannot be regarded as satisfactory from the point of view of a uniformly available rural credit until there are evidences that the life insurance companies are making efforts to find safe farm mortgages in the States from which they draw the largest part of their premiums and which most need developing agriculturally, because of the proximity of great cities and numerous manufacturing centres whose population requires an abundant supply of farm products for its subsistence. It is to be hoped that, now that these partial statistics have been obtained, they will be gathered on an even more inclusive scale from year to year, and that they will gradually show an increased flow of life insurance money to the farmers of the New England and Northeastern States.

A PERPLEXED OBSERVER OF MR. DARWIN P. KINGSLEY'S CAMPAIGN TO MAKE INSURANCE COMMERCE

To the Editor of the Market World and Chronicle:

SIR: I have been a deeply interested observer of the campaign so strenuously conducted by Mr. Darwin P. Kingsley, President of the New York Life Insurance Company, to have insurance declared to be, in a legal and constitutional sense, commerce. As I remember, he has for a long time held to the opinion that this ought to be done, but his efforts seem to have been redoubled of late. First there was, a few months ago, his unsuccessful test case carried up to the Supreme Court from Montana (New York Life Insurance Company vs. Deer Lodge County, Montana); then came his proposed amendment to the Constitution of the United States, through which he hopes to remove insurance from the jurisdiction of the States to that of the United States; more recently, he has suggested making the question the chief theme of discussion at the World's Insurance Congress to be held in connection with the Panama Exposition in San Francisco.

As I understand the matter, Mr. Kingsley is using every means within his power to overthrow, or at least to circumvent, the time-honored decision of the United States Supreme Court in the case of Paul vs. Virginia, wherein, as hardly now needs to be said, the court decided once, and apparently irrevocably, that a contract of insurance is not commerce, hence cannot under any circumstances be interstate commerce, and so fails to come within any of the enumerated powers of the Federal Government, even though a particular insurance transaction may be interstate in character, in respect of the domiciles of the insurer and of the insured. Mr. Kingsley appears to contend that by the rule of reason, if not of law, insurance is commerce, and to insist that the inherent nature of the business is such that it should be brought under the control of the National Government rather than left to the States. His evident objection is to gain for insurance, instead of forty-eight different masters, each with a different set of regulations, one master and one code.

As I think has been said in your pages, one cannot but sympathize with Mr. Kingsley, both in his desire for uniformity in the regulation and in the taxation of insurance, and also in his persistence in what seems to him a worthy cause. Yet in my capacity as an observer I find myself asking myself the perplexing question: What would be the precise status of insurance (and, consequently, of insurance carriers), were Mr. Kingsley to be successful in his efforts? Should he bring about what he is attempting, what would he have accomplished? Would he not merely have increased the number of masters by one, instead of decreasing it by forty-seven? He would have conferred upon the Federal Government the power to regulate, but would he have abrogated the power of the States to regulate, except in so far as their regulations might conflict with those of the Federal Government? In other words, inasmuch as only a portion of the insurance contracts made are interstate, even as respects the domicile of the insurer and of the insured, would not the perplexing situation arise that some contracts would be entirely subject to the regulation of the States and others (no doubt the larger portion) to that of the Federal Government? And would the case with regard to taxation be materially different from what it is now? I understand that the States have the right to tax railroads and other property used in interstate commerce. Could they not do the same with insurance, if it were included in interstate commerce?

Leaving aside the advisability of bringing insurance within the

scope of the Federal power, why does Mr. Kingsley adopt the circuitous and uncertain route to his end. of having insurance first declared to be commerce and then interstate commerce, and so within the constitutional grant to the Federal Government of power over interstate commerce? Why not go straight to the goal and, if a Constitutional amendment is practicable, have the power to regulate insurance, in and for itself, conferred upon the Federal Government? This would avoid the repugnant procedure which you have recently called "trying to change the nature of a thing by changing its name." It is to be presumed that the numerous declarations of the Supreme Court to the effect that insurance is not commerce rest upon something more than the maintenance of a precedent which originated with a whim. They must rest upon the tradition of the law and the general judgment of mankind. A vote of Congress, or of three-fourths of the State legislatures or indeed, of the people of this single country of the United States cannot alter this judgment. Why, then, does Mr. Kingsley undertake to have an artificial definition of insurance adopted for our peculiar use? And particularly why does he do this, when the way is open to him to have insurance *per se*, brought within the Federal power? Has Mr Kingsley forgotten his geometrical axiom that a straight line is the shortest distance between two points?

Yours truly,

SCRUTATOR RERUM.

New York, July 7, 1914.

[As we remember, Mr. Kingsley has publicly denied that his was the inspiration of the bill introduced in the United States Senate by Senator Weeks, of Massachusetts, providing for an amendment to the Constitution which should confer the power of regulating insurance upon the Federal Government. Our correspondent is quite correct, however, in thinking that Mr. Kingsley has repeatedly urged that in some way it should be brought about that insurance should be included in the definition of commerce. We have ourselves thought that, even from Mr. Kingsley's point of view, this is a disadvantageous method of procedure. It is undoubtedly true that if insurance were to-morrow to be declared commerce, only that part of it which is transacted from State to State could be regulated by the Federal Government. Business of insurance companies in their home States would continue to be subject to the regulation of the authorities of those States, except in so far as the principle of the recent Supreme Court decision in the Shreveport Rate Case might come into play. In the matter of taxation, the States could no longer exact license fees, either of companies or of agents soliciting business (see the case of Robbins vs. Shelby Taxing District, 120 U. S., 489, where it was held that drummers soliciting business for concerns without the State of Tennessee could not be compelled to pay license fees). On the other hand, various other forms of taxation of insurance companies would be open to the States, if they chose to avail themselves of them. They could tax their gross premium receipts, as a measure of the taxable property held by them on account of business done within the several States (United States Express Company vs. Minnesota, 223 U. S., 335). They could probably tax the reserves held by them against policies issued to the citizens of the States. Still other forms of valid taxation may easily be devised. Hence neither uniformity of regulation nor avoidance of State taxation would necessarily be secured by having insurance defined as commerce. On the other hand, we are not sure that any better result would be obtained by following the course suggested by our correspondent, of having the power of regulation of insurance *per se* conferred upon the Federal Government. The line is straight enough, to be sure; but could it be driven? Certainly we have nothing now in our Federal system quite like the, as we understand it, proposed exclusive control and regulation of insurance by the central Government. We have, under our present system, various services which are wholly in the hands of the central Government, such as the mails, the maintenance of harbors and navigable streams, the forest reservations, etc. But with these everything is the Government's; while insurance would be a business conducted by private individuals, citizens of States, involving immense property values also belonging to private citizens, and yet the States in which the business is conducted and the property situated would have no control over either. This seems to us so anomalous as to be necessarily impermanent, if it should be tried. National insurance, like the National mail service, would appear to us to be the logical outcome.—Editor]

FIRE COMPANIES WIN POINT IN KANSAS RATE CUT FIGHT

The Supreme Court of Kansas has upheld the contention of fire insurance companies that reductions in rates ordered in 1909 and 1910 by Insurance Superintendent Barnes were excessive and were not made according to law. "While the companies won," says a special despatch to the "Journal of Commerce" of New York, "they will not be able to increase rates until Fall, as a temporary injunction was issued in the Leavenworth case restraining them from advancing rates, and no action can be taken in this matter until courts reconvene in the Fall.

"When it became known last year that the fire insurance companies intended to file a petition in the court at Topeka, asking for an increase in rates, Attorney General Dawson went to Leavenworth and began proceedings to prevent the companies from increasing rates. This action was taken the day before the companies' bill was filed. Attorney General Dawson then moved to dismiss the bill filed by the companies at Topeka on the ground that the same issues were covered in the Leavenworth case, but he was overruled. He then demurred to the petition of the companies and was again overruled and appealed from these decisions to the Supreme Court.

"In the meantime he stipulated in writing that the judgment might be entered as asked by the companies if the Supreme Court sustained the demurrers. As the demurrers conceded the facts set up by the companies that the rates were inadequate, this waived any formal proof of their claims to that effect. In spite of this stipulation, Attorney General Dawson, under the law, has twenty days within which to ask for a rehearing. Should he ask this the Supreme Court could not pass upon it until it reconvenes in October. Mr. Dawson also claims that the preliminary restraining order issued in the Leavenworth case has never been dissolved and that this precludes the companies from increasing rates. Although it is conceded that this decision of the Supreme Court practically disposes of the Leavenworth case, it cannot formally be disposed of until about the middle of November.

"The opinion of the Supreme Court reviewed the facts as set up in the petition of the companies showing that the rates were inadequate and that the notice required by law had not been given. The State had claimed that the law provided that any company dissatisfied with the rates made by the insurance commissioner could file a petition within thirty days to have them set aside, and that having failed to do so within thirty days the companies had lost their rights. The Supreme Court held that this thirty days' clause was not limitation. The Supreme Court also held that the Leavenworth case was a different action and did not control the issues involved, and therefore overruled the demurrer of the Attorney General and remanded the case for further proceedings."

NOTES ON INSURANCE, AMERICAN AND FOREIGN

Fire Losses in June.—The losses by fire in the United States and Canada during the month of June, as compiled by the "Journal of Commerce" of New York, aggregate $29,348,000, an increase of $4,405,300 over the figures for June last year, which was largely due to the losses by the Salem conflagration. The losses for the first half of 1914 reach the total of $133,018,250, as compared with $118,245,650 for the first six months of 1913. The following table gives a comparison of the losses by months this year with those of the same months in 1913 and 1912:

	1912.	1913.	1914.
January	$35,653,150	$20,193,250	$23,204,700
February	28,601,650	22,084,600	21,744,200
March	16,650,850	17,511,000	25,512,750
April	16,349,400	16,738,250	17,700,800
May	21,013,950	17,225,850	15,507,800
June	16,103,450	24,942,700	29,348,000
Total, six months	$134,372,450	$118,245,650	$133,018,250

The loss at Salem is placed by the "Journal of Commerce" at $13,000,000. Other estimates place that loss as high as $25,000,000, with insurance aggregating about $13,000,000.

* * *

To Study Social Insurance Abroad.—The National Civic Federation will conduct an investigation abroad this Summer, into the general subject of social insurance. An announcement of the plan says:

"The Social Insurance Department of the National Civic Federation is to conduct an investigation abroad into foreign methods of social and industrial insurance. George W. Perkins, chairman of the department, has appointed a committee consisting of J. W. Sullivan of the Typographical Union, representing wage earners; Arthur Williams, President of the Association of Edison Illuminating Companies, representing employers, and P. Tecumseh Sherman, attorney and social insurance specialist. This committee will hold sessions in London and Paris in July.

"The department of the Civic Federation has now under consideration the question: Should there be a systematic scheme of compulsory sickness insurance advocated for State legislation in the United States? The foreign investigation now undertaken is a preliminary to a more comprehensive consideration to be given the subject next Spring, when there will be made an attempt to bring together all available information regarding existing institutions, methods, or plans which would serve social insurance purposes in the United States.

"Especial attention will be given by the foreign committee at the outset to the operation of the comparatively new National Insurance Act of Great Britain. Some attention will also be given to methods employed in Germany. The purpose is to obtain as much information as possible indicating the prevalent feeling in Europe, particularly toward State systems of insurance. Particular attention will be given to the attitude of both employers and wage earners toward the laws now in force and to the desire of either side for changes in the laws."

Accident Insurance Without Death Benefit.—"A plan for writing accident and health insurance without a death benefit is said to be in process of evolution by a well known casualty company, believed to be the Continental Casualty," says the "Western Underwriter" of Chicago. "According to the report the company proposes to sell a pure accident and health indemnity contract for $50 annually on a basis of $25 a week indemnity, and the idea is to have such a contract handled principally by life insurance salesmen as a complement to their life insurance contracts. The originator of the plan is of the opinion that death benefits belong properly in the field of life insurance, and that disability insurance should be kept strictly such. The proposed new policy eliminates expensive frills entirely and is based on service to the policyholder. It is proposed that if the application is made within thirty days of the date of an examination for life insurance issued by any old line company, so as to give the company the benefit of the medical selection, the rate will be reduced 20 per cent, so that a policy for $25 weekly indemnity will then cost but $40. The contract also is devoid of some of the restrictions contained in the prevailing forms, and is planned with the expectation of making it the most popular form on the market for real service. The other accident policies already issued by this company will be allowed to take their own chances with the new form in the open market, and if they are displaced by it, well and good."

* * *

Compensation Rulings.—The Workmen's Compensation Bureau of the New York State Insurance Department has issued the following general rulings:

"Clerical Office Force.—Inquiries have been made as to rating for clerical office force employed by a manufacturer whose office force is located in an office building at a different location from that at which the plant is operated. The committee rules that such office force is properly classified at the compensation rate of .05 for clerical office employes.

"Medical Aid Discount.—Where a discount is applied for the elimination of statutory medical aid this discount should be applied to the net rate after the discount for merit rating has been applied.

"Outside Salesmen on Commission Basis.—The entire compensation in the form of commission or other remunerations must be included in the payroll upon which premium is based. It is permissible to exclude any outside salesmen who are continuously employed outside the State of New York.

"Specific Contracts.—It is permissible for an insurance carrier to issue a policy upon a specific contract at a defined location. In such case the policy form to be used is the Standard Special Form limited as to employes covered."

Motor Underwriters' Plans Changed.—Mr. Harrison Law, manager of the Fire Brokers' Association of the City of New York, announces that at a special meeting of the Executive Committee of the Fire Brokers' Association, called for the purpose, the following report of the committee on the Manufacturers and Dealers Motor Underwriters, Inc., was received and unanimously approved:

"Referring to the Manufacturers and Dealers Motor Underwriters, Inc., and to the Fire Brokers' Resolution of May 12, 1914, your committee are pleased to report the change into an Automobile Service Bureau, of this enterprise which so seriously threatened the interests of all legitimate insurance brokers and agents. Your committee wishes to express its full appreciation of the action of the Continental and Fidelity-Phenix Insurance Companies of New York, and to express their thanks to Manager E. H. Greenwood and Mr. W. B. Joyce, Chairman of the Executive Committee of the Manufacturers and Dealers Motor Underwriters, Inc., and trusts that the members of our association will show their appreciation of the action of all these parties in a practical manner whenever opportunity offers."

The following resolution was then offered and also approved:

"Resolved—That the announcement in the July 6th morning paper of the re-adjustment of the present organization of the Manufacturers and Dealers Motor Underwriters into an Automo-

bile Service Bureau, heartily commends itself to the directors of the Fire Brokers' Association, as they believe that such a bureau would yield good results, not only to the companies, but to the insuring public. It should give general satisfaction in reducing the expense of automobile repairs, removing controversies between companies and loss claimants as well as in reducing the number of cars stolen, all of which should in time enable the companies to reduce the cost of insurance to our patrons."

* * *

Health and Accident Policy Conditions.—The insurance department of West Virginia makes the following comment on the subject of health and accident policy conditions: "A large percentage of the health and accident policies submitted for the approval of this department provide for indemnity when the insured is 'unable to perform the duties of any business or occupation,' and we find that some of the companies desire to interpret this provision literally. As health and accident insurance is intended to take the place of wages during the insured's incapacity for work and as a man in many cases might be physically able to perform the duties of some occupation which he is not professionally qualified to fill, although physically unable to perform the duties of any occupation for which he is fitted, including of course his regular occupation, the hazard of which establishes his premium charge; we hold that the word 'any' in the provision above referred to should mean HIS, and that policies should be so worded in order to prevent any misunderstanding. We note that some companies require the insured to make, in his application, very comprehensive warranties in regard to his physical condition. If such warranties are required they should not be too strictly construed, where the element of fraud is not present. For example, we do not approve of the refusal of a claim for disability caused by skin disease on the ground of false warranty because it appeared that the insured had organic heart trouble although he was not aware of this condition when the application was signed. If these warranties were generally construed as strictly as in this instance, the payment of a great many deserving claims could be avoided."

* * *

Insurance Conditions in the Piraeus.—In a British Consular report on the Piraeus it is stated that about twenty-five years ago three Greek insurance companies commenced operations in Greece. Owing, however, to bad management two of these suspended payment. The Greek Government then passed a Bill for the protection of persons insured. Its provisions proved so stringent that several British companies withdrew, but it is hoped that, as peace and order have been restored, those companies will return. Foreign insurance companies intend to open up general agencies in Greece. Fire insurance is said to have good prospects of succeeding, owing to the solid structure of the buildings and the creation of modern fire brigades.

Murderous Attack an Accident Under Workmen's Compensation.—Although by a divided opinion the British House of Lords has upheld the contention that a murderous attack, although in pursuance of a preconcerted plan, is an accident under the British Workmen's Compensation Act of 1906. A schoolmaster, Kelly, was killed by his pupils, and the County Court Judge of Meath made an award of compensation which was affirmed by the Court of Appeal in Ireland. The case came before the House of Lords on appeal. The majority finding is thus stated by the "Post Magazine and Insurance Monitor," of London:

"The question for decision was whether a schoolmaster, who, while performing his duties, was assaulted by his pupils in pursuance of a preconcerted plan of attack, and was so severely injured that he died on the same day, met his death by accident arising out of and in the course of his employment. The County Court Judge held that he did, and made an award in favour of the present respondent, the mother of the deceased.

"The Lord Chancellor, after referring to the facts and the findings of the County Court Judge, said that 'accident' was a word the meaning of which might vary according as the context varied. In criminal jurisprudence crime and accident were sharply divided by the presence or absence of *mens rea*. But in contracts such as those of marine insurance and of carriage by sea that was not so. He referred to what was laid down by Lords Herschell and Bramwell in 'Wilson v. Owners of the Xanthe,' when over-ruling the notion that a peril or an accident in such cases was what must happen without the fault of anybody. It was therefore necessary, in endeavoring to arrive at what was meant by 'accident' to consider the context in which the word was introduced. If he had to consider the principle of the statute as *res integra*, he would be of opinion that the principle was one more akin to insurance at the expense of the employer, against accidents arising out of and in the course of the workman's employment, than to the imposition on the employer of liability for anything for which he might reasonably be made answerable on the ground that he ought to have foreseen and prevented it. He thought the fundamental conception was that of insurance in the true sense. If so, it followed that in giving a meaning to 'accident' in its context in such a scheme one would look naturally to the *proxima causa*, the kind of event which was unlooked for and sudden, and caused personal injury, and was limited only by this—that it must arise out of and in the course of the employment. But it was argued for the appellants that the definition of accident under this Act was determined differently by the judgments in the House in 'Fenton v. Thorley' (1903). But the House was not there considering an injury unexpected by the workman, but caused by the intentional act of another person. Nor did he think that the expressions used in those judgments excluded such a case from the definition actually given of accident. When Lord Macnaghten defined 'accident' as used in the Act 'in the popular and ordinary sense of the word as denoting an unlooked for mishap or an untoward event which was not expected or designed,' he (the Lord Chancellor) thought that the context showed that in using the word 'designed' he meant designed by the sufferer. If the object of this statute were as wide as he gathered from the study of its language, its construction must be that accident included any injury which was not expected or designed by the workman himself. If so, the Court of Appeal in England was right in its decision in 'Nisbet v. Rayne' (1910) that the definition extended to a case of death by murder, and the Court of Appeal in Ireland was right in 'Anderson v. Balfour' (1910) and in the present case in taking a similar view. In the present case the facts left little doubt on his mind that, from one point of view at all events, Kelly met with what might properly be described as an accident, and it was not the less an accident in an ordinary and popular sense in which the word was often used merely for the reason that it was caused by deliberate violence. For the rest, he had no doubt that there was evidence on which the arbitrator could find, as he did, that the accident so de-

THE MARKET WORLD AND CHRONICLE in the course of a year gives its readers authoritative signed contributions upon every large question in the insurance world, and is a thorough commentary on finance, commodity markets and international trade

fined arose out of, and in the course of, the employment. The appeal, therefore, should be dismissed with costs."

INSURANCE NEWS IN THE WEST

Underwriters' Agencies Go to Court.—The fight between Superintendent Rufus M. Potts of Illinois, and the underwriters' agencies is now in the courts. Judge Potts was expected to start legal steps within a few days, but the companies started them themselves. Forty-seven companies maintaining underwriters' agencies on Monday applied to the United States District Court at Springfield, Ill., for an injunction to restrain the superintendent from interfering with their business. A. & J. H. Stoddart of New York, brought a separate action to restrain Judge Potts from interfering with the copyrighted name of the New York Underwriters' Agency. On Tuesday a stipulation was entered into between the parties to the suit, under which Judge Potts agreed to take no action against the underwriters' agencies pending decision on the application for the injunction. Judge Potts was given until July 13 to decide whether he will move to dismiss the application for injunction. If he does so move, the issue will be brought before the court on that motion. If he does not, it is agreed that the case will be argued on its merits on July 27. Considerable of the companies' petition was devoted to setting up facts necessary to bring the case within the jurisdiction of a Federal court, the companies averring that if the superintendent should undertake to stop their conducting underwriters' agencies they would be injured to the extent of $3,000 or more.

* * *

Quits Merchants National Fire.—L. S. MacEnaney has resigned as managing underwriter of the Merchants National Fire of Chicago. He has had an unhappy experience with the company. It is only in the promotion stage and has not progressed very rapidly. It is stated on pretty good authority that the promoters have actually collected about $127,000 and that the expenses up to this time have been about $47,000. Presumably the trustees have on hand a large amount in installment notes, the full amount realized out of which will go to the company, as it is customary for the promotors to take their pay out of the first cash collected.

There have been dissensions between Mr. McEnaney and certain trustees on the one side and George H. Bresee, the chief promoter on the other. Oliver Fitch, one of Mr. MacEnaney's friends among the trustees, together with certain associates, had arranged to buy Mr. Bresee's interest, but after the associates looked the proposition over they decided not to invest, so the control remained with the Bresee party. Then Mr. MacEnaney decided it was time for him to get out. He has devoted considerable of his time to the Merchants National agency, pending the completion of organization of the company. The agency represents the Peoples National and the Central Union of Kansas City. Representatives of these companies have been checking up the agency within the past few days.

Part of Mr. MacEnaney's troubles consisted in trying to keep the stock salesmen from getting the company into entangling agency alliances before it was actually going. Some of them were ready to make agency contracts with persons to whom they sought to sell stock, regardless of whether these persons represented Union or Bureau companies or were otherwise fit.

Surety Companies Balk at Bank Failure Losses.—The Southern Surety and the American Fidelity, each of which had a $75,000 depository bond on the failed La Salle Street Trust and Savings Bank, have refused to pay the amounts of their bonds, and the Southern Surety already has started suit. Secretary Piatt of the American Fidelity came to Chicago with the company's check for $75,000, but after arriving and finding out something of the true condition he refused to turn it over to the city treasurer. The action of these companies arises out of the action of the city treasurer before the bank failed. Mayor Harrison heard reports of the bank's condition and notified City Treasurer Flynn. Instead of withdrawing the city funds, he demanded collateral from the bank and secured $283,000 in various securities. The depository bonds covering the bank's allotment of city funds amounted to $650,000. The two companies which have refused to pay the city's claim contend that if this collateral is good and the city is in rightful possession of it, the city's total claim is reduced by that amount, and its claim against each surety should be reduced accordingly. The Southern Surety is seeking to get a judicial decision of the questions involved. The opinion is expressed in some quarters that the surety companies that paid up so promptly were hasty. There are several angles of the situation that have not been cleared up yet by any means. The facts have shown clearly enough that nearly all the general surety companies operating in Illinois got into a very bad mess in executing bonds for this institution and its associates. No comfort is to be found in the fact that after the city treasurer was warned that the main bank was in a bad way he failed to protect the sureties by withdrawing city funds, but merely accepted collateral for less than half the amount of the city deposits—this collateral being regarded by some as of doubtful quality.

* * *

Insurance and Politics in Ohio.—The Ohio Industrial Commission is playing good politics, whether or not it is administering the State compensation fund well. It reduced rates on July 1, and it got the fact thoroughly advertised throughout the State, for it has an efficient press bureau and the administration papers naturally are glad to help along a cause which means so much to the administration. The Governor and several of his official associates are seeking re-election this Fall. The present workmen's compensation law has been one of the Governor's pet measures and he has striven for popularity largely by his bitter attacks on the liability companies. The State Industrial Commission is gaining a reputation for liberality in compensating injured workmen, which of course is popular with a very large class of voters. A rate reduction, retroactive to the time the subscriber to the State fund paid his first premium, is naturally acceptable to those who are paying the premiums. A comparison of the Ohio State fund rates with the Wisconsin stock company manual rates satisfies the unthinking that the State fund plan is much cheaper than the stock company plan. Such comparisons have been circulated widely. Whether the Industrial Commission will "get away with it" permanently is another question. If the stock liability people's opinions are good for anything, the Ohio rates are inadequate and it will be only a question of time until advances and assessments will be necessary. Then the employers would view the subject differently. However, that time, if it come at all, is not likely to come until after the present administration has made the most of the popular features of State-conducted insurance.

* * *

Burial Benefit Not Accident Insurance.—The Massachusetts Bonding, which recently reinsured the accident and health business of the Philadelphia Life, has been notified by the Ohio department that it cannot assume liability under the "burial benefit" provision of the Philadelphia Life policies, under which the company promised to pay a small sum in event of death from natural causes. The Philadelphia Life, being licensed in Ohio as a life company, could write such policies, but the Massachusetts Bonding is licensed

as a casualty company to do accident and health business. The department rules that these funeral benefits constitute life insurance.

* * *

Midland Casualty Extends Lines.—The Midland Casualty of Chicago, whose business up to this time has been accident and health insurance, is about to enter the burglary and plate glass insurance field. The company was chartered to write accident and health and liability insurance. It is amending its charter, eliminating the liability feature, which it has never used, and substituting plate glass and burglary insurance. It also is reducing its capital from $250,000 to $200,000 in order to create surplus.

Chicago, July 10, 1914.

LA SALLE.

ITEMS OF INSURANCE NEWS

The amount of the new life insurance issued in Canada by the Canadian companies last year was $131,493,582 as compared with $141,267,596 in 1912, a decrease of $9,774,014. The new policies of the British companies amounted to $6,950,695, as against $7,319,952 the previous year, a decrease of $369,257. The new policies of the United States companies amounted to $93,164,269, as compared with $70,617,555 in 1912, an increase of $22,546,714. Canadian companies had $750,637,512 of insurance in force at the end of 1913, as compared with $706,656,117 at the end of 1912, a gain of $43,981,395. The United States companies had $359,775,330, as compared with $309,114,827, a gain of $50,660,503.

Insurance Congress Commissioner Hathaway has written a letter in answer to Darwin Kingsley's open letter. Mr. Hathaway says it is hardly the province of the Congress Commission to adopt and advocate any particular object other than the broader task of effecting for the first time a harmonious co-operation of the tremendous segregated influences of insurance for the accomplishment of such purposes as they may decide to be mutually advantageous. Mr. Kingsley wants the Congress to specifically and largely work for a constitutional amendment making insurance commerce and subject to National supervision.

The Three Trades Fire Insurance Company, which is being organized in Louisville to write whisky, coal and tobacco risks, is putting out some interesting statistics on whisky business, based on reports from leading trade journals in that line. According to these figures the loss by fire on spirits in distillery warehouses in the United States for the last ten years was 2.78 per cent. An interesting thing, indicating great concentration of values, is the wide variation in the figures, the loss in 1904 being 1,582,824 gallons, while in 1905 it was but 5,732 gallons. In 1912 it was 1,316,283 gallons and in 1913 but 24,981 gallons.

The managers of several of the accident and health companies writing industrial insurance at that point have organized the District Managers' Co-operative Association of Terre Haute, Ind. Officers were elected as follows: President, J. D. Hunt, secretary and manager, Industrial Sick and Accident; vice-president, Otis French, division manager, Security Casualty; secretary, V. P. Lewis, district manager, Hoosier Casualty; treasurer, G. W. Thompson, district manager, Continental Casualty.

The United States Life and Annuity Insurance Company, of Chicago, has acquired title to the sixteen-story building at 18-20 East Jackson Boulevard, which is 119 feet from the Michigan Avenue Boulevard, on which the McCormick Building, the present home office of the company stands. The building, formerly known as the Gibbons Building, will now be called the United States Life and Annuity Building. The company will later occupy one or more floors as its home office.

The following officers for the Session of 1914-1915 of the Insurance Institute of Toronto were elected at the annual meeting on May 28: Honorary president, Alfred Wright, manager London and Lancashire Fire Insurance Company; president, W. H. Hall, The Canadian Surety Company; vice-president, G. B. Woods, Continental Life; secretary, A. W. Goddard, Canadian Fire Underwriters' Association; treasurer, C. Elvin, Imperial Life; curator, V. R. Smith, Confederation Life.

In order that the State Fire Prevention Association of Indiana may benefit by the experiences of outside fire prevention officials, a system of exchanging speakers with other States has been adopted. At the annual meeting of the Indiana Association in LaFayette Walter H. Bennett, State Fire Marshal of Illinois, delivered an address. Next year a member of the Indiana Fire Marshal Department will speak before a similar meeting held in Illinois.

One living in Belgrade (Servia), says a consular report, is impressed with the infrequency of fire. The losses therefrom are small. There are few wooden structures, the buildings are not high, and are largely detached or semi-detached. Buildings are usually heated with big built-in stoves in the individual rooms. In this city of 100,000 the average annual losses from fires during the decade 1899-1908 were only $11,700.

A review based upon an examination by the London "Times" of the accounts of twenty-one leading British fire insurance companies showed a total premium income of £27,245,583, in 1913, which is an increase of £696,916 or over 2.6 per cent, as compared with 1912. The total surplus of premiums over claims and expenses was 11 per cent as against 11.86 per cent in 1912.

The following committees have been appointed by President C. J. Holman, of the Insurance Society of New York: Finance, Henry W. Lowe, chairman; adjustment of losses and lectures, Allen E. Clough, chairman; William N. Bament, Everard B. Hopwood; accountancy meetings, L. H. Eckhardt, chairman; T. D. Richardson, C. F. Voorhis; auditor, J. C. Maneely.

Dr. Frederic W. Loughran has been appointed chief medical advisor of the State Insurance Fund Department of the New York Workmen's Compensation Commission. Dr. Loughran has been medical examiner of the Equitable Assurance Society for the past fifteen years. He served about twelve years as a medical and sanitary inspector in the Health Department of the City of New York.

The Fidelity and Deposit of Baltimore has decided to establish a branch office in South America and has effected an alliance with the Commercial Surety (Caucion Comercial)—the only corporate surety company of Argentina. The Fidelity and Deposit is now operating abroad in England, Russia, Germany, France, Austria, Netherlands and Cuba.

The Mississippi Life Underwriters' Association at their annual meeting held at Jackson, Miss., on June 22, elected officers as follows:. President, A. C. Crowder, who succeeds E. L. Ragland; vice-president, I. E. Gunter, who succeeds A. C. Crowder in that position; secretary, Warren Pullen, who succeeds his father, W. H. Pullen, Sr.

With an authorized capital of $250,000, of which $103,960 has been paid in, the Interstate Casualty and Guaranty of Albuquerque, N. M., has been licensed to do business in its home State. For the present, the company will write only accident and health business. James A. Blaney is secretary and general manager.

Since the maternity allowances have been in force, Australian mothers to the number of 172,455 have drawn the £5 ($24.33) allowance. Bonus claims totaling 4,080 have been rejected for some reason or other, while 1,321 cases are under consideration.

In the twelve months ended April 30, 1914, the Equitable Life paid over $20,690,000 domestic death claims and endowments and it is stated that over $3,290,000 had to be deducted from that amount to liquidate outstanding policy loans.

The Farmers National Life Insurance Company of America, Chicago, Ill., is offering a trip to the Panama Exposition at San Francisco to all of its agents who write before July 1, 1915, $100,000 of bona fide accepted and paid-for business.

Adolph Harbers, for some years manager of the Providentia of Frankfort, Germany, has been appointed general manager of the Aachen and Munich at its home office in Germany, succeeding the late Fritz Schroeder.

The Insurance Society of Cleveland has elected officers as follows: Carroll L. Dewitt, president; L. A. Welbor, vice-president; Ford A. Drake, secretary; George C. Simpson, treasurer, and Bernard T. Duffey, librarian.

The Sun Life Assurance Company of Canada, after nearly two years of negotiations in an effort to comply with the new insurance law of Japan, has received its license to continue doing business in the Empire.

Fire losses in Chicago during the first five months of the present year exceeded those of a similar period of 1913 by nearly $100,000. The total to June 1 of 1914 was $2,895,549 and of a year ago $2,799,332.

J. E. Phelps, of Los Angeles, has been appointed Insurance Commissioner of California, succeeding E. C. Cooper, who resigned to become president of the Great Republic Life of Los Angeles.

Archduke Ferdinand, the Austro-Hungarian prince who recently was assassinated, is reported to have carried about $12,000,000 of life insurance and his wife $6,000,000, in Dutch companies.

The International Life of St. Louis, Mo., has completed negotiations for taking over the American Home Life of Fort Worth, Texas. About $7,000,000 of insurance is involved.

The semi-annual meeting of the Western Insurance Bureau will be held at White Sulphur Springs, W. Va., Tuesday and Wednesday, October 20 and 21.

All the business of the North American Accident Association of Saginaw, Mich., has been reinsured in the North American Accident of Chicago.

The National Surety has reinsured the fidelity and surety business of the Citizens' Trust and Guaranty Company of Parkersburg, W. Va.

The International Congress of Actuaries will be held in St. Petersburg, Russia, from May 31 to June 5, 1915.

The total premium receipts of the Liverpool and London and Globe, in 1913, exceeded $25,000,000.

REVIEW OF THE FINANCIAL SITUATION

WASHINGTON became a storm centre of financial and business attention in the past week, not that the eyes of the business world have at any time been turned far away from Washington for months past. No matter what one thinks of the absolute importance of the political factor in economic affairs, it cannot be disputed that politics has been a large influence in trade, industry and the security markets, an influence for restraint on recovering tendencies if not a substantial cause of much depression. In the last few days, however, the political plot seemed to thicken with indications that a situation was being reached at the National Capitol which promised developments that must make sentimentally for business betterment or the contrary.

At the present moment of writing there is no way of telling how the Warburg episode is going to turn out, but whether Mr. Warburg is or is not a member of the Federal Reserve Board the country will have learned a valuable lesson from the exhibition of political consequences which it has witnessed. The people have been confronted with a signal demonstration of the inevitable conclusion to which the kind of politics we have been having for years has tended, which is that the chances of enlisting men of conspicuous ability in the public service were anything but bright. We have been living in a French revolutionary atmosphere of suspicion, denunciation and proscription levelled against men of large affairs as though the ethics of big business was after all anything worse than the general morality of the time.

We have no doubt that big business has acquired valuable experience and a profitable knowledge of the error of its ways in recent years as a result of the tremendous social discontent which has been demogogically fomented and politically expressed in administrative and legislative action against large scale corporations and the centres of financial and corporate endeavor. We are more doubtful that the public as a whole has learned to know itself in the same way, but the Warburg affair has been attended with some hopeful features.

It has revealed the country as unwilling to subscribe to the notion that men of character and capacity must be excluded from public office unless they will consent to lend themselves to political inquisitions designed to promote the interests of legislative candidacies in constituencies where radical appeals to ignorance and prejudice have offered the greatest certainty of election. It has also been revealed that the country was as though stunned by the suggestion that Mr. Warburg's refusal to become an excuse for an attack on Wall Street must cost the Nation the aid which he could render in establishing the new banking experiment to which the American people are committed.

For such a task it was the verdict of informed judgment that Mr. Warburg could bring to the Federal Reserve Board more useful knowledge and trained intelligence than any other one man in the United States. President Wilson had gladly sought and had with difficulty obtained from Mr. Warburg a reluctant but patriotic consent to accept appointment to the board. More than any other one man he had been responsible for guiding the movement for banking reform since 1907, along those lines which made it possible to enact currency legislation last year involving a recognition of sound banking and currency principles. The country's wide desire to have the benefit of Mr. Warburg's practical cooperation in the new banking undertaking and his own record in promoting it clearly constituted a call of duty to which he yielded, although it meant tremendous personal sacrifice of more than a material sort. His private associations were wholly congenial to his tastes as public office could not be, but with loyalty to his profession and his adopted country he agreed to tear himself away from his surroundings and occupations and devote himself to a work of vast difficulty which would be all the greater because so much would be expected from his particular share.

What happened last week was a curious and very discouraging illustration of the imbecility which has come to characterize our political life. Mr. Warburg was not a candidate for office, but the Senate Banking and Currency Committee proceeded to treat him as though he was an eager aspirant for powerful place, supported by the mythical money devil which, according to political fiction, haunts the precincts and purlieus of Wall Street, that constitute Mr. Warburg's environment. Having passed with perfunctory scrutiny the names of three little known appointees to the Federal Reserve Board the committee gave a malign twist to its consideration of the rest of the Presidential slate by singling out Mr. Thomas D. Jones, of Chicago, and Mr. Paul M. Warburg, of New York, for a special inquisition because of their affiliations or contact with large scale enterprise. Mr. Jones allowed the committee to examine him on his business relations and in the course of the hearing made an interesting contradiction of President Wilson's endorsement of him as a corporation reformer.

Mr. Warburg took the position that the line of inquiry which the committee proposed to address to him, as indicated by a letter which he had received, was improper and not pertinent to his qualifications for Federal Reserve Board membership. The Senate Committee's attitude became such that he felt obliged to suggest to the President the advisability of withdrawing his name from consideration, but as the week approached a close, the matter fell into a state of uncertainty.

From all over the country there came a great protest against the political stupidity which would prevent Mr. Warburg from serving in an office where his services would probably be of priceless advantage for the general welfare. He was praised also for manifesting a self respect which would not brook the humiliation that the Senate Committee intended for him in the plan to put him on the rack of interrogation as to his views respecting financial subjects wholly outside Federal Reserve Board jurisdiction. On the other hand there was evidence that popular favor would be divided between Mr. Warburg and the Senate if the banker's refusal to undergo examination took the form of denying the committee's right to ask him any questions at all.

The whole affair, whatever its other implications may be, showed clearly the condition into which our politics had fallen and the danger which threatened, that men of conspicuous ability would decline perforce to make the necessary surrenders to enter public life if all the petty qualities of democracy were to be in the ascendant. A very useful purpose was nevertheless served by the Warburg episode in that it drew from President Wilson a statement of optimistic import for the banking and business community.

A note new for the Wilson Administration was struck by the President's declaration that the Democratic party knew "that the business of the country has been chiefly promoted in recent years by enterprises organized on a great scale and that the vast majority

of the men connected with what we have come to call big business are honest, incorruptible and patriotic. It is the obvious business of statesmanship," the President went on to say, "at this turning point in our development to recognize ability and character, wherever it has been displayed, and unite every force for the uplifting of legitimate business along the new lines which are now clearly indicated for the future."

Following the White House reception of Mr. Morgan the audience accorded by the President to a delegation of Chicago business men seemed to imply precisely such recognition of business character and ability, but a recognition which had been almost totally denied by the Administration until very recently. The Chicago merchants went to Washington to tell the President that he ought to drop his further programme of business legislation except the Federal Trades Commission bill, and it would not be surprising if the Administration should suddenly discover the wisdom of reducing fresh enactment to that particular feature.

It is the general voice of the country that the various pending measures elaborating the anti-trust law aim to accomplish too much. It is plain that the country is ready to accept general business regulation already established in the transportation industry and in banking, but it is not ready to go farther. An inference that the President is ready to modify his programme is permissible from the way in which he has lately altered his demeanor towards men of affairs. In all probability the President and his Cabinet are, as the party leaders in Congress have long been, vastly concerned over the depth and extent of hard times, and it is not at all unlikely that the hard times argument is compelling political inclination to concede a business respite from agitation.

In the meantime July has brought some symptoms of a disposition of trade and industry to recover a bit in response to the prospect of the crops. The July report was a most encouraging exhibit, its features of greatest brilliance being the extraordinary yield of 655,000,000 bushels indicated for Winter wheat, as large an outturn as the average of Winter and Spring wheat combined over a long term of years. Foreign conditions have looked a little more hopeful as the French loan was enormously over-subscribed, but it remains to be seen if the subscription by the public was large enough to provide the long awaited stimulus to financial activity at Paris.

COTTON

July 11, 1914.

NOT much of real interest has occurred in the cotton futures markets during the past week. Trading has been in very small volume and net price changes have been hardly more than nominal, though the new crop positions in New York all closed somewhat higher yesterday (Friday) than they had closed on the previous Friday. The general temper of the trade has been almost overwhelmingly bearish, few indeed being willing to make any commitments for the rise. The news cabled from abroad to New York was almost exclusively of a bearish tenor. First came the announcement that the governing committee of the International Federation of Master Cotton Spinners' and Manufacturers' Associations had adopted a resolution recommending that the members of the Association curtail manufacturing operations for a total of 150 hours during the coming three months. In order to be effective this resolution must be adopted by a mail vote of the spinners and manufacturers themselves. This vote will be taken on July 17, but it is suggested that the Continental spinners, whose business has decidedly improved of late, may be unwilling to curtail at this time, when their English competitors are temporarily out of the running. Another piece of bearish information received this week from abroad was the June report of the British Board of Trade on the months' exports of cotton yarns and cloths. The exports of yarns showed up very well, being about the same as for June last year, when British trade was very active. The exports of cloths, however, showed a falling off from those of June last year to the extent of no less than 116,000.000 yards, or nearly 20 per cent. The trade could draw no other deduction from such figures than that the cotton manufacturing business in Great Britain is really passing through a period of very great depression, marked by a dearth of spot transactions and of new contracts for goods. though relieved for some part of the mills by the orders booked for India and the Far East during February and March. The private advices from Liverpool and Manchester are virtually all of the most pessimistic nature, no hope of better things apparently being entertained by anybody in spite of the excellent monsoon which India is enjoying. Even threatening labor troubles are mentioned as capping the climax of misfortune. Of course, much lower prices for cotton in the near future are confidently predicted, although it is observable that the Liverpool market exhibits a steadiness and a reluctance to decline more marked than do the American markets. And both English and Continental spinners, despite their pessimism, are steadily buying the cotton which business conservatism requires them to make sure of before the new season actually begins. This buying, again, meets little selling except straight-out short selling. The existing visible supply of American cotton, though larger than last year's at the beginning of July, consists so largely of very low grade and untenderable cottons that its owners dare not sell future contracts as hedges against it. It fails, therefore, to serve the usual function of the visible supply at the end of the year, i. e. to serve as the basis of future contracts which are needed to hedge commitments later on in the season. Such is the quality of the present visible supply of American cotton that those who need to buy hedge contracts for the next three months must look entirely to the speculators operating for the decline. It is unnecessary to say that this is a very frail staff on which to lean, particularly if any indication of crop deterioration should make the speculators buyers instead of sellers. On the American side of the water, there is at the moment one important reason why traders in cotton should hesitate to make commitments on either side, of other than the most trifling character. This is the absolute uncertainty and confusion of opinion, even among the best minds in the trade, as to the effect that will be produced upon the price of cotton in the markets of the United States by the enactment of the Lever Bill for the restrictive regulation of cotton exchanges, which is now in the hands of a conference committee of the Senate and the House of Representatives. Even the form which this measure will be given in the conference committee is completely in doubt, and the trade simply knows that some regulative measure will very probably be enacted into law. Assuming that the final draught of the measure is substantially the same as the Lever Bill, what effect upon the price of cotton in the United States will result from the provision that any person within the United States who sends an order to Liverpool, Bremen or Havre, for the sale of contracts as hedges against cotton he has just bought here, must pay a tax of $5.00 per bale? What will be the result, in terms of price, of the provision that any person tendering or receiving cotton upon contracts made on the New York and New Orleans Exchanges can dispute the grade or length of staple given to the cotton and appeal the matter to the Secretary of Agriculture, tying up the cotton until a decision is rendered? Nobody knows the answers to these questions, and, consequently, there can be no free trading in the American markets until, first, the regulatory law is actually passed by Congress and can be studied in its final form; and, second, until the trade can arrive at a reasonable consensus of opinion as to the true meaning and effect of the law. In the meantime, the chief interest of American traders consists, so to speak, in sitting on the fence and watching the crop. At the moment, a majority of these city farmers are very favorably impressed with the progress the crop is making. Local showers are commented on with satisfaction, and are perhaps exaggerated in respect of their importance as the news is passed along the line. The truth seems to be that the past two weeks have been far from good for the cotton crop as a whole. High temperatures over practically the entire Cotton Belt, relieved only here and there by adequate showers, have resulted in a relative deterioration of the crop, although, of course, in the absolute sense there has been growth and a measure of the development which the time of year calls for.

Cotton Production of Adana Province, Asiatic Turkey.—A report from United States Consul Edward P. Nathan, Mersina, Turkey, speaks of last year's production of cotton and this year's expected production of cotton in the Province of Adana, Asiatic Turkey, as follows: "All indications point to a large cotton crop in the Province of Adana, Turkey, this year. Last year's crop of 115,000 bales will doubtless be exceeded if present prospects are realized. Sowings this year are in excess of last year and the plentiful rains have caused most of the seed to sprout. The cotton is, however, mostly short fibre and will not in any way affect the demand for American cotton."

Rainfall in the Cotton Belt.—The precipitation of rain in the various sections of the Cotton Belt from March 1 to June 29, as compared with the normal rainfall for the same period, is illustrated by "Pearsall's Market Bulletins," by means of a table showing the

amount of rainfall above or below normal shown by the Weather Bureau for selected localities in all the important cotton-producing States. The table (somewhat rearranged) is as follows, the figures for the period from March 1 to June 8 being given in parallel column, so that the reader may see at a glance the changes between June 8 and June 29. Excesses of rainfall above normal are indicated by the sign (+) and deficiencies below normal by the sign (—):

RAINFALL MARCH 1 TO JUNE 29 AT SELECTED POINTS IN THE COTTON BELT.

(In Inches Above or Below Normal).

Cotton Production in Nigeria in 1913-1914.—A recent consular report speaks of the progress of cotton cultivation in Nigeria, and of the results obtained from the 1914 crop as follows: "The growing conditions for cotton were not so good in Northern Nigeria as in Southern Nigeria during the past year, due to the lack of rain. In the Kano district in Northern Nigeria the natives are said to consume about 50,000 bales of cotton annually in the manufacture of goods on their hand looms. The exports of cotton for the past season were estimated at 20,000 bales of 400 pounds each. It was reported that the British Cotton Growing Association during the early part of the present year decided to send out to Nigeria cotton gins and stores costing about $100,000, to be on hand in time for the 1915 crop. It was planned to install an electric plant at one of the principal points to enable the operators to work nights if necessary. It is also stated that the Association has decided to allow a minimum price of 1⅛ pence (2¼ cents) per pound for all seed cotton delivered during the present year at the Association's agencies."

NEW YORK QUOTATIONS FOR STANDARD COTTON GOODS AND YARNS

The following are quoted prices in the New York market for typical standard cotton goods (in cents per yard) and cotton yarns (in cents per pound) on Friday of last week and on Wednesday of the present week:

Cloths.	Friday.	Wednesday.
Print cloths, 28 in. 64 x 64s	3¾	3¾
Gray goods, 38 in., standard	5 3/16-5¼	5 3/16-5¼
Brown sheetings, Southern standard	8	8
Denims, 9-ounce	14-17	14-17
Tickings, 8-ounce	13½	13½

COTTON SPINNING ABANDONED AT HONGKONG

MR. GEORGE E. ANDERSON, United States Consul at Hong Kong, China, writes that after more than fifteen years of effort by a concern organized with all needful capital under the best European supervision and the most favorable trade auspices, the spinning of cotton yarn and weaving of cotton piece goods from local-made yarn has been abandoned in Hong Kong by the determination of the Hong Kong Cotton Spinning, Weaving & Dyeing Co., to go into liquidation.

In some respects this determination taken by the company at its meeting April 20, is one of the most significant in the latter-day industrial history of South Asia. The company was organized in 1898 with a capital of $900,000 local currency and under the general management of Jardine Matheson & Co., one of the most powerful concerns in the Far East. Its history since that time has followed the ups and downs of the cotton-spinning industry in the Far East generally, which has not been satisfactory or profitable as a whole, and in addition it has faced certain conditions which have made success in the spinning business in Hong Kong impossible.

At the time of the formation of the Hong Kong company the general cotton-spinning situation in China was unsatisfactory, and Shanghai and other mills, as a rule, were making little money. It was maintained, however, that with a supply of native cotton and of Indian cotton within reach the local mill ought to be able to compete successfully with Indian and Japanese mills not so favorably located as regards supplies, labor, and other cost elements. From the beginning, however, there was a question as to results, and $100 shares were quoted at $80 by the time the mill was running, and three months later they were quoted at $56. By the middle of 1901, as a result of the abnormally high price of cotton, the prevalence of plague in the colony, and because of disturbances all over China in the Boxer troubles, the mill was closed down with a debit balance against it in favor of its general managers of $1,656,000 local currency, the Honk Kong dollar then being worth about 45 cents gold. The company was reconstructed with a capital of $1,250,000 local currency, the loss written off, times improved, and for a couple of years the mill paid dividends of 10 per cent. Later the dividends fell to 5 per cent, partly paid out of a dividend equalization fund, and still later they were stopped and losses were experienced year after year.

The company commenced to dispose of its machinery and plant to Shanghai mills under the general control of the same concern which has managed the mill here, and the final action of the company has been to arrange for reorganization in the way of transferring its remaining plant to a new concern in Shanghai for the operation of a mill there and for the realization of its assets, principally valuable real estate. Discussing the reasons for the failure of the Hong Kong enterprise in the final meeting the chairman (Mr. David Landale) said:

"I can assure you that the poor results obtained here have nothing whatever to do with the personnel of the foreign management. We have every confidence in those we have employed to carry out the general and technical management of the mill, and I do not think that more could have been done than has been done to make the business a success. We have found, however, by experience that there are many circumstances which militate against Hong Kong as a suitable place for cotton spinning. In the first place, the hot, damp climate we have for so many months here greatly hampers spinning operations. Again, the labor obtainable in Hong Kong is more expensive and less efficient than that to be found in Shanghai. The raw material has all to be imported, and to the cost price of raw cotton bought in Shanghai for Hong Kong we have to add the cost of packing, freight, and export duty. A mill here, therefore, as far as China cotton is concerned, is handicapped from the start as compared with a mill in Shanghai.

There is still considerable uncertainty as to the cotton spinning industry in China itself, although at present the industry in the Yangtze Valley is thriving. The difference between the Yangtze Valley and Hong Kong situation is shown by the fact that the Shanghai mill known as the Ewo Mill, which is owned and managed largely by the same interests as those which have controlled the Hong Kong mill, in the season of 1911-1912 made a profit of 4.22 taels per spindle and during 1912-1913 a profit of 6.81 taels per spindle, while the Hong Kong mill did not make a profit in 1911-1912 and only the equivalent of 1.73 taels per spindle in 1912-1913. Had the Hong Kong mill done as well as the Shanghai mill in the season of 1912-1913 it would have earned the equivalent of 311,418 taels instead of only the equivalent of 79,324 taels. [The Shanghai tael was worth on April 1, 1914, $0.632 and the Canton tael $0.69 U. S. currency.]

It is unlikely that Hong Kong will undertake any cotton spinning of moment for some time to come at best. The most serious phase of the matter from the Hong Kong standpoint is the excessive cost of labor and the high cost and low quality of the labor available for other industrial purposes in the colony. The quality of labor is naturally poorer in the South than in the North, all things considered. One important element in the situation, however, is the high cost of living in Hong Kong, due to high rents and expensive transportation. The matter of rents can probably be relieved somewhat by more favorable terms from the Government on Crown leases. The matter of transporting materials and supplies of all sorts for building and all other purposes and of reducing the cost of living generally for the working classes is causing increasing anxiety on the part of all industrial interests in the colony.

Things and actions are what they are, and the consequences of them will be what they will be; why then should we desire to be deceived?—Bishop Butler's Sermons at the Rolls.

THE report made on Monday of this week by the Interstate Commerce Commission to the Senate of the results of the investigations of the former body into the affairs of the New York, New Haven and Hartford Railroad has necessarily produced an extremely painful impression upon the public mind. In general, the language of the report is as severe as language can well be; and no person at all acquainted with the subject can doubt that as regards many of the matters treated even greater severity would have been in order. There is abundant evidence that during the period of Mr. Mellen's presidency of the New Haven the devices of deviousness, of ingenious concealment of the truth, of corporate legerdemain, of unhesitating employment of delusive means to attain dubious ends, have been carried as far as ever they were carried in these United States. The mere revelation of the extent to which accounts have been made to record essential lies, rather than the true state of facts and the real meaning of transactions is enough to make honest men stand aghast. Language cannot be too harsh in the description of such proceedings. Every thinking man knows that the integrity of business depends upon the integrity of accounts, and that there is moral obliquity of the most reprehensible kind in recording in journals and ledgers transactions that are shams, operations that appear to be one thing and are another, cheating representations of what actually occurred as though it were something else. The mere recital in the report of the Interstate Commerce Commission of what it encountered in the books of the New Haven is sufficient to show that careful probity had small place in the keeping of them.

Again, the wholesale manufacturing of phantom corporations, having no business of their own, invented often on the spur of the moment for the effectuation of this or that delusive transfer of nominal ownership of property or of interest in property, borrowing huge sums with one hand only to pay them back with the other, dodging from State to State, appearing and disappearing with the incalculability of the kaleidoscope, now real, now mere shadows,—could anything be more completely *contra bonos mores* than this? What a superficies of unwholesome business ethics, of carelessness of the primary business duties, of reckless disregard for the first principles of an honorable and above-board conduct of affairs, these imitation corporations of the New Haven and the correspondent scheme of baffling accounting, present? The Interstate Commerce Commission could do no less than characterize it all with language highly unpleasant to the ears of those having any part of the responsibility.

It is eminently possible, however, that these repellant externals of the affairs of the New Haven may interfere with an absolutely just estimation of what has actually come about in that unfortunate railroad and of the real reasons why it has come about. It would be hard to imagine a worse plight for a great property to be in than that in which the New Haven is to-day. And a multitude of wholly innocent persons are suffering bitterly by reason of this plight. The present duty is not to concentrate attention upon what has been done, with the one thought of applying the lash to the backs of the offenders, but rather to strive to arrive at a dispassionate understanding of the situation and to lend all possible aid to those who have the hard task of repairing the damage. Neither understanding nor aid, however, are possible if temper is allowed to dominate thinking on the subject. An exact picture of the facts as they are, unobscured by indignation in part misplaced, is a *sine qua non* of the assistance of the public in remedying such evils as are known to remain and in giving full opportunity for the forces of recuperation to do their work.

Reduced to exact figures, as arrived at by the Interstate Commerce Commission itself, what has been the actual amount of loss and waste resulting from the miscalculations and mismanagement of those in charge of the affairs of the New Haven during the past eleven years? The Interstate Commerce Commission reports that the capitalization of the road in 1903 was $93,000,000, and that ten years later it was $417,000,000, while the floating debt had grown from nothing to $40,000,000. Of this great increase of capital investment how much, according to the Commission, has been lost through waste and mismanagement? The tangible items of loss given by the Commission foot up about $65,000,000, though the Commission's round statement is that "a reasonable estimate of the loss to the New Haven by reason of waste and mismanagement" will amount to between $60,000,000 and $90,000,000. The lower of these amounts is, of course, a huge sum of money; but, on the other hand, the higher of them is only 20 per cent of the capital invested in the New Haven. And innumerable corporations and firms have lost 20 per cent of their capital in

a single year, without being regarded as on the way to bankruptcy or as beyond the possibility of speedy recovery to their old estate. The Commission, to be sure, lays stress upon the fact that of the $324,000,000 increase of the New Haven's capital in ten years, only $120,000,000 was used for purposes of betterment and equipment of the railroad itself, while $204,000,000 was used for operations outside the New Haven's sphere as a railroad and with the object of obtaining a monopoly of the transportation of the five States of New England in violation of law.

We are far from intending to deny that the dominant purpose in the minds of those chiefly responsible for the policy of the New Haven in the last decade was to obtain effective control over the transportation facilities of New England. There are many and to us convincing evidences that this was the case. Some parts of the programme followed undoubtedly tended directly to the accomplishment of this purpose. On the other hand, large parts of the programme had no taint of essential illegality about them, however extravagant and improvident may have been the methods of carrying them out. Thus the purchase of the Rhode Island trolley lines, much dwelt upon as illustrating the reckless wastefulness of the New Haven management, violated no law whatever, so far as we can see. These trolleys are confined wholly within the State of Rhode Island; they are not engaged in interstate commerce; and the acquisition of them was in no sense a violation either of the Sherman Act or of any statute of Rhode Island. Indeed, if the matter be looked at from another angle, more than a plausible case can be made out for the entire propriety of the acquisition of these lines. All over the country at this very moment railroads are constructing trolley-line feeders for their main lines; and in so doing they are looked upon not as would-be monopolists of the transportation in the surrounding districts, but as greatly benefiting the public. If there had been no trolley lines in Rhode Island and the New Haven had undertaken to build a net work of them through the State, not a word would have been said by anybody about its unlawful purposes. And what is true of the Rhode Island trolleys is equally true of the Massachusetts and Connecticut trolleys acquired by the New Haven. The price paid for them appears to have been exorbitant, taking into account their earning power at the time they were purchased; but the purchase itself was not illegal or criminal whether under the Federal law or under the laws of the respective States. No better evidence of this can be found than the evident embarrassment of the Federal Department of Justice in finding legal means of compelling the road to give up these trolley lines.

With regard to the acquisition of the Boston and Maine and the Rutland the case is, of course, far more doubtful, though it may be said of both that for the most part they are natural extensions, rather than competitors of the New Haven. The lease of the Boston and Albany went even farther in the direction of plain illegality. The purchase of all the water transportation lines from Boston and intermediate points to New York was very evidently far beyond what was permissible under the Sherman Act. As for the grossly improvident acquisition and construction of the New York, Westchester and Boston road, with its stench of political corruption and of financial buccaneering, we do not find one word to be said in defense of it.

In spite of all, however, the largest amount of waste and loss that the Interstate Commerce Commission has been able to figure as resulting from all these operations, legal and illegal, of the New Haven is $90,000,000; and this, in our opinion, is less than the waste and loss involved in the construction by the Pennsylvania of its New York passenger terminal and in the construction of the Grand Central Terminal by the New York Central. The Interstate Commerce Commission, so far as we can remember, has never uttered a word of condemnation of these pieces of magnificent folly, nor has it used words of approbrium about the directors of the roads that built them. Yet there those terminals stand, annually eating into the revenues of the roads that own them, to an amount greater than all the loss computed by the Commission itself as resulting to the New Haven from the operation of all its ill-advised acquisitions, including the malodorous New York, Westchester and Boston. Strange indeed are the ways of popular condemnation of the acts of men!

The primary fact to be faced with regard to the New Haven is that a great project was undertaken, that this project encountered insuperable obstacles both in the law of the land and in the invincible feeling of the community, and that the project failed of success. The loss attendant upon the failure, figured by those most intent on making it as large as possible, was 20 per cent of the capital put into the property. The property itself, naturally one of the finest of its kind in the world, remains, capable of repairing the loss, precisely as an old, substantial business of any kind is capable of repairing an even greater proportionate loss of capital, made in a bad year. It goes without saying that whatever remains of illegality, as well as extravagance, in the New Haven, has to be cut away; but this cannot mean irreparable harm. It is the part of that portion of the public that comprehends the mistakes men make in all affairs, to cease from objurgation and the lust of punishment, and to estimate coolly and yet with sympathetic imagination the progress of the reconstructive work. Any other course is absurd from a business standpoint, as well as indefensible from the point of view of right reason.

One word more may not be out of place. It is clear that there are those who would fasten upon the late J. P. Morgan the largest share of responsibility for what has happened to the New Haven. This is something that he himself would wish to have squarely met, for he least of all would wish to take refuge behind the formula *de mortuis nil nisi bonum*. We think it to be more than probable that the great project of giving the New Haven control over the transportation of New England was his. He belonged to New England and loved it. He saw the shabby, disjointed, inefficient transportation system of New England clogging the industrial development of the whole region. It was like him to conceive of that system of transportation transformed under unified control, made efficient and contributing to the industrial and commercial growth of the entire New England community. He was accustomed to command, to exercise authority; and, as he said before the Pujo Committee, "control is everything." He never understood the deep aversion in the American, as in the English mind, for monopoly and all that savors of monopoly. His own greatest and most beneficent achievements had been made possible by the absoluteness of his power at the time and under the circumstances with which he had to deal. After this fashion he would give New England a new trans-

portation system. That was the large programme in his mind; and, as must needs be the case, with a man so old and so busy, he left the details to others. He had the misfortune to choose miserable tools wherewith to work. They knew no ways of accomplishing what had to be done except the ways of deviousness, of subterfuge, of low cunning and of intrigue. The whole plan was fatally wrong in itself and must ultimately have failed, because the New England public, much as it needed serving, would not be served on those terms; but the scandal of the failure belongs to others than Mr. Morgan.

Arthur Richmond Marsh

A CANADIAN SINGLE-TAXER ON PROFESSOR BULLOCK'S ACCOUNT OF THE SINGLE TAX IN VANCOUVER

To the Editor of the Market World and Chronicle:

SIR.—I have read with keen interest Professor Bullock's article on the "History and Operation of the Single Tax in Vancouver," which was "featured" in your issue of July 4, as reprinted from the New York "Evening Post." It is hardly to be supposed that you will give space to an unknown outsider to criticize the article, but I hope that you may read the following, as it may possibly help to set right with you those extreme Single-Taxers who are described by Professor Bullock as being "frankly for the confiscation of land values."

If, as the Professor appears to believe, there was an organized and deliberate attempt to exploit the success of taxation reform in Vancouver, it is beyond my knowledge and does not affect the position as I see it. Professor Bullock's article goes to prove that the Single Tax is applied in Vancouver only in part; that even as applied it is not established and may be changed; and that either it has been ineffective in producing Vancouver's late feverish prosperity or it must be held accountable for that city's present depression.

I ask you to recollect that it had been alleged that the Single Tax in any form and to any extent was confiscatory and that it would scare away "capital" from the place adopting it and so bring ruin and disaster. On the contrary, we Single Taxers had said that it was honest and expedient and would bring prosperity; and that, if completely adopted, it would abolish poverty and the fear of poverty and bring about an economic millennium. As Henry George says, "The tendency of conflict is toward extremes." The more we argued the more extreme grew the statements on either side.

Vancouver adopted a form of what we call the "Municipal Single Tax." The city "untaxed" industry by shifting a portion of the public burden from improvements to land values. Our opponents looked for disaster. Instead there came, for a time, prosperity. Now comes the "busted boom," and Professor Bullock virtually offers us the choice of credit for prosperity or discredit for adversity.

If I have any say about it, we take both. Also we take credit for understanding from the beginning a situation which Professor Bullock seems to have difficulty in understanding, even with the easy wisdom which comes after the event. I have not authority at hand, but I can prove, if given time, that well-known Single Tax authorities declared during Vancouver's prosperity that there was trouble ahead if the tax were not increased rapidly enough to absorb the land values as created. The reasoning was extremely simple: Free improvements from taxation and you encourage building; encourage building and you increase the demand for land; increase the demand for land and you increase land values, including speculative values,—and speculation is loss and loss means a "busted boom." On the contrary, confiscate land values as they arise and you make speculation impossible, with the obvious result of no "boom" and no "bust."

If Professor Bullock holds the superior, if not disdainful, attitude toward Henry George that many learned men maintained at one time, he will think it an impertinence for one to suggest that he should read George as a student reads a master. Yet I venture to think that one can no more understand taxation without the aid of George than he can understand physics without the aid of Newton. I have read the subject somewhat extensively, and I have yet to see the problem stated that George has not anticipated and solved.

A. C. CAMPBELL.

House of Commons, Ottawa, Canada, July 10, 1914.

[We are glad to print our Canadian correspondent's presentation of the Single-Taxers' side of the trial, partial though it be, of the single tax in Vancouver. It is certain that the experience of that city will hold an important place for some time to come in discussions of the practical benefits derived from the application of this doctrine of taxation. Though our own opinion is strongly on the side of Professor Bullock, we shall not attempt to enter the lists on his behalf; his armory is certainly much better furnished with the weapons of fact and argument than is ours. At the same time, we cannot help expressing our complete inability to follow what our correspondent calls the "extremely simple reasoning" which led Canadian Single Taxers à outrance to predict a "busted boom" in Vancouver, unless all increase in land values in that city were distrained by a corresponding increase of the tax on land. We have never be able to comprehend how "untaxing" improvements on land "encourages" building. So far as we can see, the only encouragement to building that exists or can exist is the demand for buildings on the part of people needing them, and that has nothing to do with the "taxing" or "untaxing" of the buildings themselves. It depends wholly on the number of persons who are drawn to a given community by the economic or other opportunities and advantages to be found there. Certainly no sane person would be induced to construct a building by the mere fact that, after he had constructed it, he would not be called upon to pay taxes on it. We can see, however, that the confiscation of the entire economic rent of particular pieces of land,—and this is what the single tax really is,—would induce owners of land whose economic rent is large, to try to secure by indirection as great a part of this rent as possible for themselves by constructing the largest possible buildings on the land and drawing as many rent-payers as possible to these buildings, at the expense of buildings on land whose economic rent is low. In our view, then, the final effect of the single tax would not be to encourage more building, but to encourage more congested building, and at the same time to diminish, rather than to increase the demand for land. Our correspondent may, of course, reply that such was not the case at Vancouver during the days of the "boom"; that the demand for buildings created a demand for land upon which to erect them; and that this demand for land produced increasing land values, which the too slowly increasing land tax did not absorb. Naturally, the answer to this contention is that it is only slowly that the building conceptions of a community are transformed by a newly applied economic principle. The average new-comer to Vancouver undoubtedly thought he must have substantially the same kind of a home and the same kind of a place for his business that he had been accustomed to in the community from which he came. This prepossession could be exploited by land speculators for a long time,—perhaps for a generation,—if the influx of new population had continued at

the same rate as in the "boom" days. In the long run, however, and the more rapidly in proportion to the thoroughness of the application of the single tax principle, the economic advantage of using the smallest possible amount of land with the largest possible structure upon it, must assert itself. It is probably true that under these conditions no collapse of a speculation in land is possible, because there will be no such speculation. But we do not see why there should not be a collapse of a speculation in buildings, betwixt which and a "busted boom" in land we cannot perceive the slightest essential difference.—Editor.]

Has the Average Workingman Made An Economic Gain Through the Labor Union

NOT long since the French economist, M. Pierre Leroy-Beaulieu, distinguished son of the still more distinguished father, M. Paul Leroy-Beaulieu, published in "L'Économiste Français," a study of the rising course of prices in these recent years, and of the course of the average wage of workingmen in France during the same period. His statistics showed that though the average wage had decidedly risen during the past twenty years, it was far from having kept pace with the rise in the price of commodities. At first sight this might appear to be merely a restatement of that familiar phenomenon, the "high cost of living." But M. Leroy-Beaulieu went farther and showed that the wages of workers in industries virtually controlled by labor unions, or "syndicates," had risen even less than wages in the free or non-unionized industries. His explanation of this fact was that the policy of the labor unions had been to keep down the production of the individual worker, to maintain a warfare with employers through strikes, "sabotage," etc., and consequently both to increase the labor cost to the employer and to reduce the production of his establishment. The unescapable economic result of this was that the amount of consumable and exchangeable goods produced by the workmen was diminished and they consequently had less to exchange for the products of other industries or of other countries. The money wages they received could not but correspond with this reduced production of exchangeable commodities, and consequently the wages, whether money wages or real wages, failed to advance in proportion with the market value of the commodities needed or desired by them.

It is customary to look at labor unions rather from a social than from an economic point of view. The common opinion is that in union there is strength, and that the collective bargaining of the union must procure better wages for the workers than would be possible through their own puny strength, when acting each for himself. There can be little doubt that numerous cases could be cited in which this has actually been true. Particularly if workers in a given industry can get themselves into a position of quasi-monopoly in that industry, they can undoubtedly obtain better terms from employers through a strong labor union than they could get acting individually. But the question is now raised by competent authority whether in industry as a whole wage-earners have actually made economic gains for themselves through their association in labor unions. Is it a matter of statistical fact that the average remuneration of labor in unionized industries is higher than in non-unionized industries, and that in the former the wages have more nearly kept pace with the rising prices of commodities than in the latter. The question is both an economic and a social one; and it is sure, now that it has been broached, to receive an increasing amount of attention and to affect popular ideas on the subject most profoundly.

There has recently appeared in the New York "Sun" a study of the wages of union, as contrasted with non-union, miners in the United States, which seems to yield results exactly parallel with those obtained by M. Pierre Leroy-Beaulieu. The article is by Mr. Charles F. Carter, and on its face it is a first-hand study of the wages earned by mine-workers in the chief mining sections of the United States. There has been no opportunity for the editor of this paper to check up Mr. Carter's figures, and consequently they can not here be vouched for. They are, however, so interesting and so provocative of discussion that the larger part of Mr. Carter's article is reprinted herewith. It is as follows:

* * *

Considered as an academic theory the labor union is a good thing. Viewed from the standpoint of practical politics also the labor union is a good thing—better even that the pension list. Union labor now musters 2,389,600 votes, which rightly manipulated should be enough to elect anybody, to anything, anywhere.

Recent developments, however, have been such as to suggest inquiring whether the labor union is really the good thing it is represented to be or whether the members paying dues and assessments are the "good things."

In the mind of the average man the dominant feature of labor unions is the strike. Most labor news which reaches the general public is associated in one way or another with strikes or threatened strikes.

Turning, then, to volume 17 of the report of the Industrial Commission of 1901, we find that the loss of wages on account of strikes in the United States in the twenty years from 1881 to 1900 was $257,863,478.

It would take a great many days work to earn so vast a sum. It would take a much greater number of days work to get back this loss in any possible increase in wages over and above the rate paid before the strikes. As there is no way to balance the account by showing what was actually gained, if anything, the reader is left free to form any conclusion he pleases, while we turn to the latest available figures concerning all workers.

These are found in the twenty-first annual report of the Commissioner of Labor. Not a word is said about gains or losses by strikes, but the information is given that there were 36,757 strikes in the United States in the twenty-five years from 1881 to 1905, of which 68.99 per cent were ordered by labor organizations, and that these union strikes involved 79.69 per cent of all strikers.

In these disturbances 6,728,048 persons struck and 8,708,824 were thrown out of work for an average period of 25.4 days.

Of strikes ordered by labor organizations 49.48 per cent were successful and 15.87 per cent partly successful. As 33.86 per cent of the strikes not ordered by labor organizations were successful and 9.83 per cent partly successful, it would appear that the union is less potent as a weapon for forcing concessions from reluctant employers than has been alleged.

Further research is disheartening to those who would promote their material welfare by organization, for the fact is revealed that only 40.72 per cent of all strikes in a quarter of a century were in whole or even in part for an increase in wages. In less than 10 per cent of strikes a demand for shorter hours was combined with

other demands. Yet it is popularly supposed that the great ends sought by union workmen are increased wages to enable them to raise their standards of living and more leisure in which to enjoy added comforts that higher wages buy.

So it seems that seven-tenths of all strikes are ordered by labor unions, that only two-fifths of these are connected with any demand for higher wages and less than half are successful.

To put it another way, these official data, covering a long term of years, show that six times out of every ten that the union workman strikes he does so with no hope of gaining any more money to pay the grocer, but with the positive knowledge that for an indefinite number of days he will have no money at all to pay anybody. In the remaining four strikes in ten he does not stand quite an even chance of getting a small increase to offset the wages totally lost. And in every one of the ten strikes he runs a risk of losing his job altogether.

Regarded as an investment, the union card seems to leave something to be desired.

If official data concerning all unions are less complete than could be desired it is at least possible to find out all about one representative union, and this information may serve as a key to the whole union problem. By good luck it happens that the one union which is subject to special statistical oversight by both National and State governments, concerning which, therefore, full information is available, is the union which for various reasons has been most conspicuously in the public eye.

This labor organization is the United Mine Workers of America, a former secretary-treasurer of which is now a member of the Cabinet.

The United Mine Workers is alleged to be increasing in membership more rapidly than any other of the 111 unions affiliated with the American Federation of Labor.

The United Mine Workers is the only labor organization that ever had the enterprise to conduct an armed insurrection, in which pitched battles were fought by men armed with high power modern rifles, provided by the union, and commanded by union officers, with State troops. The United Mine Workers has conducted two such insurrections in two States in two years and has announced that a third will be commenced as soon as United States troops are withdrawn from Colorado.

The United Mine Workers is the only labor organization ever made the subject of special legislation by Congress. The officers of the United Mine Workers are under indictment in two States. By unanimous vote the House has exempted labor unions, including these officers of course, from the operations of the law under which they were indicted.

Tracing this highly interesting labor organization through the twenty-first annual report of the Commissioner of Labor, we find that more than 9 per cent of all strikes in the last twenty-five years have been in the coal mining industry and that more men have been involved in these strikes than in strikes in any other industry.

The special report on coal mining published annually by the United States Geological Survey says 722,662 persons were employed in the coal mining industry in 1912. Of these 289,269, or 40 per cent, were members of the United Mine Workers, according to the annual report of President J. P. White, as published in the official organ of the union.

In the ten years from 1903 to 1912, according to the Geological Survey's figures, coal miners lost an aggregate of 65,118,474 days' work on account of strikes. This report does not deal with the question of wages, but annual reports of the various State bureaus of mines do.

As Illinois is so thoroughly unionized under an agreement between the operators and the United Mine Workers, made in 1898 and still in force, that no man can work in a mine in that State without a union card, it is fair to accept the Illinois rate as the proper wage for a coal miner. The average daily wage of miners in Illinois for the ten years, as given by the State Bureau of Mines, is $2.77. At this rate the aggregate wage loss of the coal miners of the United States on account of strikes in the ten years was $180,378,172. Since there is nothing to show what benefits, if any, were gained to offset this loss this inquiry must be confined to Illinois, where the union is supreme and conditions are therefore, inferentially, ideal.

The annual report of the Illinois State Bureau of Mines shows that the average rate paid for mining coal was 56.9 cents a ton in 1903, and 68.7 cents in 1912, an increase of 20 per cent. The average daily earnings increased from $2.42 in 1903, to $3.35 in 1912, a gain of 38 per cent.

As the rate received by the operator for his coal at the mine decreased from $1.24 in 1903, to $1.15 in 1912, a decrease of 7.8 per cent, while the average price for the decade was only $1.12, a decrease from 1903 of 9.6 per cent, the power of the union to advance wages in the face of a falling market seems to be established.

But this is far from being the whole story. Going back to the 1912 report of the Geological Survey we find that the Illinois miners were on strike during the ten years an aggregate of 16,575,340 days, which at the average daily wage for the period amounts to a wage loss of $45,910,921. It is sometimes contended that it is not fair to count days engaged in strikes as so many days' wages lost; but the fairness of this method is established by referring to the impartial report of the United States Geological Survey, which shows that the miners in the States where the union has but a slight foothold average more days' work in the year than in the strong union States, where there are greater labor disturbances.

For example, the union miners of Illinois had only 160 days' work according to the State Bureau of Mines, or 194 days according to the Geological Survey, while the non-union miners of West Virginia had an average of 266 days work in 1912. West Virginia coal and Illinois coal compete for the same markets, so there seems no reason except the strikes ordered by the union why Illinois miners should not have as steady work as those in West Virginia. The Illinois union miners were on strike an average of 33 days in 1912, while the non-union miners of West Virginia had an average of seventy-two days more work than their union brethren in Illinois.

If it is necessary to conduct such extensive strikes at such an enormous loss in wages while enjoying full "recognition" of the union under a continuous contract the uninitiated may be pardoned for wondering what benefits the union confers on the average member. The mystery deepens upon discovering that there were no strikes in the non-union State of Colorado in 1912, a fact deemed worthy of comment by the unemotional Government statistician, while in the stanch union State of Illinois, 77 per cent of the miners were on strike an average of thirty-three days, or an aggregate of 2,026,526 days. At the 1912 average rate of earnings as given by the State Bureau of Mines this represents a wage loss of $6,788,862.

Fortunately, the report of the Illinois Bureau of Mines contains a complete categorical answer to the question: What does the average member of the union get out of all this turmoil and idleness?

The answer is contained in a table showing the average annual earnings of miners for the ten years. It is obvious that one's in-

come is not represented by the daily rate of wages, but by the product of the rate multiplied by the number of days worked. A man receiving $100 a day would receive a pretty high rate, but if he worked only one day in the year, his annual income would be $100, wouldn't it?

While the average rate of the Illinois miners was increasing, the number of days' work they contrived to get in a year was declining, so that the average annual earnings actually decreased. Comparing the annual average of 1903 with that of 1912 shows a gain of 2½ per cent, it is true, but in five years of the decade the annual average was less than in 1903, so that the aggregate for the ten years was actually $5,240, whereas if the 1903 rate had been continued throughout the period, the aggregate average annual earnings would have been $5,426.

In other words, the result of going on strike for 16,574,340 days on orders from the union and with all the benefits that recognition of the union could confer was a net loss of $186 for each miner.

This does not represent the total loss to the average man, for he had to pay dues and assessments, which the non-union miner, of course, does not pay. And the Illinois miner paid every cent charged against him by the union, because the agreement between the union and the operators provides for the unlimited check-off, which means that the operators deduct from the wages of the miners and turn over to the union treasurer any amount they are requested by the union officers to collect. The miner never sees this money.

The National per capita tax is $3 a year. Multiplying the number of employes of Illinois mines for ten years by $3 gives a total of $1,991,652. To this sum must be added assessments levied from time to time and local dues.

It is, therefore, no doubt an under-estimate to say that, counting wages lost, dues and assessments paid, the miners of Illinois have paid $50,000,000 for the privilege of belonging to a union for ten years.

These striking figures are rendered still more impressive by comparison with results in the non-union State of West Virginia. Turning to the Geological Survey's report we find that in 1910 and 1911, the two years preceding the war for the compulsory unionization of West Virginia, the coal miners of the United States were on strike an aggregate of 20,234,261 days.

Of this total, 9,234,541 days, or nearly half the total, were contributed by the model union State of Illinois, while the miners of West Virginia, less than 4 per cent of whom belonged to the union, were on strike only 30,468 days in the two years. As West Virginia produces 9.3 per cent of the coal in the United States, if the miners of the State had been on strike their proportionate share of the total they would have lost 1,876,885 days, instead of only 30,468 days, a saving of 1,846,417 days work by the simple expedient of not belonging to a union.

Multiplying this by the average rate of wages in Illinois gives the sum of $5,114,574 as the amount gained by the miners of West Virginia by not belonging to the union for two years. Their actual gains were larger, because the average annual earnings of non-union West Virginia are higher than those of union Illinois.

For it is an amazing fact that in each of the most conspicuous three strikes conducted by the United Mine Workers in recent years, those in West Virginia, Vancouver Island and Colorado, the miners affected were receiving higher wages than the miners in the States where the union was strongest. The highest annual average in ten years, in the model union State of Illinois, was $556 in 1912. In that same year, the year the insurrection was begun by the union, the West Virginia Bureau of Mines reported the annual average earnings of miners in that State as $618.

The report of the Minister of Mines of British Columbia for 1912 gives the average daily wages of miners as $3.30 to $7 a day; of helpers, $2.86; of laborers, $2.86 to $3.30; mechanics and skilled laborers, $2.86 to $3.57. And the miners of Vancouver Island worked three hundred days in the year, as compared with the 194 days of the union miners of Illinois.

Why, the lowest paid laborer in the non-union mines of Vancouver Island earned an average of $858 during the year, or $302 more than the union miner of Illinois, while the best miners earned an average of $2,100 a year, or nearly four times as much as the average Illinois miner. Yet the United Mine Workers sent men from Indianapolis to enforce a strike against these "inhuman conditions" in Vancouver Island, and collected through the check-off fifty cents a month from the scanty earnings of the Illinois miners on the pretext that it was needed to support these British Columbia plutocrats while they were on strike! No wonder the authorities sent some of the strike leaders to prison for long terms, while the outraged miners soon plucked up courage to denounce the union and return to work.

It is interesting to find, in this connection, that President White's report for 1913 shows 5,661 members of the union in British Columbia, while the report of the Minister of Mines for 1912 shows only 5,275 underground coal mine employes in the whole province. Also, that by a pleasant fiction, as officially announced from week to week in the "United Mine Workers Journal," the "strike" is still "on" in Vancouver Island, though the mines are working full time with a waiting list of men who want work.

The report of the Colorado Bureau of Mines says nothing regarding wages; but a census bulletin gives the total wage cost of mining a ton of coal in 1909, in Colorado, as 93 cents, and in Illinois as 81 cents. The Illinois Bureau of Mines gives the average number of days work in 1912 as 160, though the Geological Survey gives 194 days. In Colorado the average was 227 days, and in the United States 223 days. It will be seen, therefore, that the Colorado miners have steadier work than the average miner and much steadier than the Illinois miner.

WORLD'S WHEAT SUPPLY ON JULY 1, 1914

The "Daily Trade Bulletin" has compiled figures of the world's stocks of wheat on July 1, 1914, and finds these stocks to have been 38,337,000 bushels less this year than on the same date last year, and in fact the smallest for the past four years. The figures are, of course, for wheat in the Visible Supply, and do not include wheat harvested in June, but not yet delivered to elevators or storehouses, or new wheat not yet afloat. The figures for July 1 and June 1, 1914, and for July 1, 1913, are as follows:

	July 1, 1914. Bushels.	June 1, 1914. Bushels.	July 1, 1913. Bushels.
Afloat for Europe	39,460,000	41,840,000	44,150,000
In store in Europe	23,430,000	27,960,000	23,940,000
In store in Argentina	1,600,000	560,000	1,120,000
In store in Australia	9,850,000	10,830,000	9,850,000
In store in United States	37,412,000	56,995,000	54,127,000
In store in Canada	18,226,000	28,814,000	19,189,000
Totals	129,978,000	167,059,000	158,376,000

The world's stocks of wheat on July 1 of each of the past fourteen years have been as follows:

	Bushels.		Bushels.
1914	129,978,000	1907	164,849,000
1913	158,376,000	1906	133,702,000
1912	152,266,000	1905	125,610,000
1911	151,664,000	1904	123,327,000
1910	125,482,000	1903	103,531,000
1909	90,470,000	1902	105,827,000
1908	99,331,000	1901	142,417,000

INDUSTRY, COMMERCE AND FINANCE

General Review of Crop Conditions.—The Department of Agriculture has issued a statement showing that the composite condition of all crops of the United States on July 1 was about 1.4 per cent above their ten-year average condition on that date. Last year the July 1 condition of all crops was 1.7 per cent below the ten-year average, but prospects declined as the season advanced, the November, or final, reports last year being 6.7 per cent below the ten-year average. Consequently, present conditions are about 8.7 per cent better than the outturn of crops last year.

The growing condition of the various crops on July 1, expressed in percentage of their ten-year averages (not the normal) on July 1, was as follows:

Winter wheat	117.3	Raspberries	100.4
Pears	110.0	Peaches	99.3
Barley	109.7	Hay	98.7
Spring wheat	109.1	Cotton	98.6
Apples	108.1	Rice	98.3
Kafir corn	107.9	Onions	95.4
Alfalfa	106.6	Potatoes	94.3
Lemons	104.9	Pasture	93.7
Oranges	104.6	Peanuts	93.5
Flax	104.3	Cabbages	93.3
Rye	103.8	Sorghum	93.3
Grapes	103.5	Blackberries	91.8
Hops	103.2	Sugar cane	91.2
Sugar beets	103.1	Lima beans	90.9
Broom corn	102.7	Tomatoes	89.3
Corn	101.3	Timothy hay	83.4
Oats	101.0	Sweet potatoes	88.3
Cantaloupes	101.0	Hemp	87.6
Beans (dry)	100.8	Clover hay	85.1
Millet	100.7	Tobacco	78.0

The average price to producers of the United States of important product on July 1 and the average of the past five years on July 1 was as follows:

Crop.	1914.	5-yr.Av.	Crop.	1914.	5-yr.Av.
Corn ....bu.	$ .755	$ .695	Hay ....tons	$12.01	$12.59
Wheat ....bu.	.769	.962	Potatoes ....bu.	.815	.762
Oats ....bu.	.388	.452	Cotton ....lb.	.124	.123
Barley ....bu.	.475	.653	Butter ....lb.	.229	.227
Rye ....bu.	.628	.760	Chickens ....lb.	.127	.115
Buckwheat ....bu.	.855	.793	Eggs ....doz.	.176	.169
Flax ....bu.	1.360	1.708			

The following figures are prices paid producers of the United States on June 15, 1914, and the average of the preceding four years on June 15:

Products.	1914.	4-yr. Average.
Hogs ....100 lbs.	$7.43	$7.10
Beef cattle ....100 lbs.	6.32	5.22
Veal calves ....100 lbs.	7.69	6.54
Sheep ....100 lbs.	4.70	4.76
Lambs ....100 lbs.	6.47	6.25
Milch cows ....each	59.82	47.09
Horses ....each	136.40	146.54
Wool, unwashed ....lb.	.184	.166
Honey, comb ....lb.	.138	.136
Honey, extract ....lb.	.106	.122
Maple sugar ....lb.	.122	....
Maple syrup ....gal.	1.117	....
Clover seed ....bu.	7.96	9.38
Timothy seed ....bu.	2.23	....
Alfalfa seed ....bu.	6.83	....
Broom corn ....ton	88.04	90.13
Cotton seed ....ton	23.62	16.04
Cabbages ....100 lbs.	2.61	2.38
Onions ....bu.	1.41	1.23
Beans ....bu.	2.23	2.33
Sweet potatoes ....bu.	.92	.93
Apples ....bu.	1.36	1.14

* * *

Copper Production in June.—The monthly report for June of the Copper Producers' Association shows that there was an increase of 21,768,022 pounds in the surplus supply of copper in the United States, to the largest amount that has been reported since February, 1913. Following are the June returns, compared with May and with June a year ago, figures representing pounds:

	June, 1914.	May, 1914.	May, 1913.
Production	141,345,571	142,308,287	121,860,853
Stocks	84,342,641	70,337,001	67,474,225
Totals	225,688,212	212,645,288	189,335,078
Exports	73,350,196	72,710,477	68,067,901
Domestic deliveries	46,227,353	55,592,170	68,452,571
Total deliveries	119,577,549	128,302,647	136,520,472
Stocks remaining	106,110,663	84,342,641	52,814,606

* * *

Mineral Production of Philippine Islands.—The following statistics of the mineral production in the Philippine Islands for the years 1912 and 1913 are taken from figures obtained from the divison of mines of the Bureau of Science of the Philippine Islands; the American equivalents of the quantities used in the table being: Metric ton=2,204.6 pounds; cubic meter=35.314 cubic feet; liter=0.26417 gallon.

	1912		1913	
Product.	Quantity.	Value.	Quantity.	Value.
Metallic:				
Iron ....metric tons	141	$24,636	227	$32,235
Silver ....fine ounces	7,121	4,332	...	.....
Gold ....fine ounces	27,582	570,212	42,011	868,362
Non-metallic:				
Coal ....metric tons	2,720	10,100	.....	.....
Clay products	.....	226,500	.....	230,000
Lime ....metric tons	.....	46,013	11,050	51,350
Sand and gravel....cubic meters	.....	234,375	689,011	297,823
Stone ....cubic meters	.....	325,525	197,039	175,020
Salt ....metric tons	19,147	287,255	19,500	287,500
Mineral water ....liters	264,871	27,925	270,000	30,000
Totals	.....	$1,756,873	.....	$1,972,230

Mineral products mined or manufactured but not sold at the end of each year are not included in the foregoing figures. The statistics for iron represent the quantity and value of iron castings, mostly plow-shares.

The shares which the various producing districts had in the 1913 gold output of the islands were:

Districts.	Value of Output.
Mancayan Suyoc (estimated Igorot production)	$25,000
Benguet	41,640
Ambos Camarines	321,722
Masbate (estimated)	420,000
Mindanao (estimated Filipino production)	30,000
Nueva Ecija (estimated Filipino production)	15,000
Pangasinan and Lower Benguet (estimated Filipino production)	15,000
Totals	$868,362

Of this total, $321,621 represents the year's production of gold by dredging. At present there are seven dredges operating in Ambos Camarines, and two more are being built. One dredge is operating in Umaeri district, Tayabas Province, and one dredge is to be built soon on the Mariquina River, near Manila.

Three mills are operating in Masbate, one in Benguet (although two other small mills are being built in this district), and one has recently been erected in Lower Benguet, Lubang district. At Cansuran, Surigao, a hydraulic sluicing plant is being installed.

The Pepper Trade of the United States.—While the United States annually purchases a large quantity of unground pepper, both black and white, the trade in this commodity has experienced wide fluctuations during the last ten years, such imports amounting to 37,094,824 pounds in the fiscal year 1909 (the highest point of the decade) and to 15,488,848 pounds in the succeeding year (the lowest point reached during the period under review). Since 1910, however, imports have increased, although in 1913 they were still some 10,000,000 pounds below the record figure of 1909. The

Straits Settlements formerly supplied much the largest portion of this pepper, but the Dutch East Indies are each year advancing in importance as a competitor in the trade. Most of the latter pepper, however, reaches the United States by way of the Netherlands, whereas that from the Straits mainly comes direct. The imports of unground black and white pepper into the United States during the last five fiscal years, with the countries whence imported, are given in the following table:

Imported from	1909.	1910.	1911.	1912.	1913.
Europe:	Pounds.	Pounds.	Pounds.	Pounds.	Pounds.
Belgium	.....	.....	.....	.....	16,030
Denmark	55,313	.....	.....	.....	.....
France	50,373	54,772	58,642	1,385,675	2,241,177
Germany	1,039,030	6,648	157,762	342,405	391,760
Netherlands	4,337,199	1,203,011	1,710,919	8,088,392	7,605,171
Spain	.....	.....	.....	14,320	.....
United Kingdom	829,789	578,834	877,593	1,408,804	1,123,972
Other Europe	.....	471	.....	.....	.....
North America	14	1,495	.....	8,427	566
Asia:					
China	1,020	4,045	.....	101,360	119,210
East Indies:					
British:					
British India	1,745,617	3,211,885	1,335,068	2,540,254	1,202,404
Straits Settlem'ts.	25,239,063	8,862,846	10,932,373	10,403,182	11,615,647
Other British	51,800	47,904	69,900	85,450	.....
Dutch	3,685,545	1,509,609	6,697,711	1,277,950	2,803,047
French	.....	.....	.....	33,264	.....
Siam	.....	.....	225,031	112,637	418,395
Other Asia	.....	2,382	25	132	13,922
Total quantity	37,094,824	15,488,848	22,065,074	25,802,252	27,562,361
Total value	$2,115,413	$1,102,104	$1,622,311	$2,599,479	$2,852,665
Average price per pound	.057	.0711	.0735	.1007	.1035

As the foregoing table shows, there has been a continuous rise in the import price of pepper, the average value per pound in 1913 being 80 per cent higher than in 1909.

* * *

The Trade of India.—Preliminary official figures relating to India's foreign trade for the fiscal year ending March 31, 1914, give the combined value of imports and exports at $1,402,566,848. Imports were valued at $594,526,208 and exports at $808,040,640. In the total of exports is included the value of exports of foreign merchandise, amounting to $15,174,819, the rest, amounting to $792,865,821, consisting wholly of exports of Indian merchandise. Imports showed an increase of $72,192,746 over the previous fiscal year. The total exports advanced in value by $9,849,426, all of which and slightly more was in the increase in value of shipments of Indian merchandise, the value of re-exports of foreign goods declining by about $200,000.

Imports and exports are classified in four groups, and for the fiscal years ending March 31, 1913 and 1914, their value was as follows:

	Imports		Exports	
Classes of Merchandise.	1912-13.	1913-14.	1912-13.	1913-14.
Food, drink and tobacco	$75,933,856	$800,011,785	$253,308,600	$210,499,915
Raw materials and produce and articles partly manufactured	40,238,212	34,252,276	335,728,558	397,456,941
Articles wholly or mainly manufactured	398,839,464	470,937,275	186,002,637	177,111,883
Miscellaneous and unclassed	7,321,930	9,324,872	7,976,600	7,797,082
Totals	$522,333,462	$594,526,208	$783,016,395	$792,865,821

These figures do not include government stores, imports of which during the last fiscal year were valued at $25,375,057, while exports for the same year were valued at $436,223. Imports of treasure for the same fiscal year were valued at $140,932,705 and exports at $22,979,240, neither of which is included in the total of exports and imports given in the table.

The gross amount of import duty collected at Indian custom houses during the last fiscal year was $35,012,460 and the export duty amounted to $4,177,564.

* * *

The Foreign Trade of Russia.—The foreign trade of Russia in 1913, along the European, Black Sea, and Caucasian frontiers and with Finland amounted to $1,360,284,000, as against $1,269,332,000 in 1912. The excess of exports over imports amounted to $103,136,000, a decrease of $98,350,000 over the corresponding figures for 1912. Imports for last year show an increase of 17.7 per cent over 1912; exports a decrease of 0.5 per cent, and import duties an increase of 12.7 per cent. The largest shipments in 1913 took place in August, September, and October, and the imports were heaviest in June, October, and November.

The following table gives the figures for the foreign trade of European Russia for the last five years. The figures for 1913 are preliminary; those for previous years are revised:

Year.	Imports.	Exports.	Year.	Imports.	Exports.
1909	$405,000,000	$704,000,000	1912	$534,000,000	$735,000,000
1910	491,000,000	713,000,000	1913	629,000,000	732,000,000
1911	527,000,000	780,000,000			

The foreign trade of European Russia by countries of origin and destination was as follows in 1912 and 1913:

	Imports		Exports	
Countries.	1912.	1913.	1912.	1913.
Austria-Hungary	$16,507,000	$17,862,000	$37,806,000	$33,607,000
Belgium	3,737,000	4,432,000	30,341,000	33,291,000
China	7,033,000	7,859,000	1,342,000	283,000
Denmark	3,319,000	6,617,000	19,614,000	18,413,000
East Indies	13,216,000	15,448,000	30,000	22,000
Egypt	1,603,000	3,053,000	2,718,000	4,445,000
France	23,412,000	28,848,000	50,547,000	51,941,000
Germany	258,374,000	331,019,000	233,696,000	233,108,000
Italy	8,055,000	8,606,000	27,025,000	37,948,000
Netherlands	9,862,000	11,093,000	79,305,000	91,389,000
Norway	5,279,000	5,086,000	2,497,000	3,446,000
Persia	69,000	67,000	184,000	155,000
Portugal	767,000	762,000	354,000	97,000
Roumania	1,002,000	728,000	10,471,000	11,172,000
Spain	1,250,000	2,920,000	1,418,000	4,596,000
Sweden	5,496,000	8,304,000	5,312,000	5,874,000
Switzerland	1,620,000	2,902,000	*	*
Turkey	7,989,000	8,723,000	14,850,000	17,747,000
United Kingdom	71,714,000	87,731,000	168,653,000	137,435,000
United States	44,134,000	38,198,000	9,272,000	7,291,000
All other countries	12,394,000	12,049,000	14,449,000	11,000,000
Totals	$511,896,000	$602,293,000	$709,884,000	$703,265,000
Finland	21,997,000	26,246,000	25,555,000	28,475,000
Grand totals	$533,893,000	$628,544,000	$735,439,000	$731,740,000

Articles invoiced for export to the United States at the American consulates of European Russia and Western Siberia, were valued at $25,874,871 in 1913, as compared with $31,136,915 in 1912.

According to official Russian statistics, imports from the United States into European Russia amounted to $38,198,000 in 1913, as compared with $44,134,000 in 1912. The largest item was raw cotton, the United States supplying almost half the total imports of this article. The value of the principal imports into European Russia from the United States in 1913 was as follows: Raw cotton, $23,282,000; agricultural machinery, $3,679,000; india rubber and gutta percha, $3,066,000; machines and machinery, $2,999,000; manufactures of wood, $633,000; rosin, $555,000; copper, $409,000; cables, rope, and twine, $386,000; automobiles, $291,000; mineral oils, $187,000; scientific apparatus, $129,000; jute and jute tow, $116,000; hides and skins, $98,000; copra, $88,000; cast-iron manufactures, $63,000; hand tools, $49,000; mineral and vegetable wax, $17,000. The trade between Russia and the United States is considerably larger than the figures indicate, because a large proportion is carried on by way of other countries.

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

PRESSING his campaign for the Federal regulation of insurance, Mr. Darwin P. Kingsley, President of the New York Life Insurance Company, has sent a letter, under date July 15, 1914, to "the responsible head of every legitimate insurance enterprise, the business of which is interstate in its character." The purpose of the letter is to ascertain from the responsible managers of all branches of insurance in the United States whether they deem it advisable to communicate with all their policyholders to the end of procuring a voluntary "initiative" in favor of an amendment to the Constitution, granting Congress the power to regulate all interstate insurance conducted by corporations. Mr. Kingsley desires to be informed, first, whether the insurance executives are willing to proceed in the matter at all; and, second, whether they are willing to ask each of their policy and contract holders the following question:

"Do you favor the passage of a Joint Resolution by Congress, submitting to the several States, for ratification or rejection, a Constitutional amendment under which (if adopted) all insurance interstate in its character shall be subject to regulation only by the Federal Government?"

Mr. Kingsley conceives that, while an appeal to Congress by insurance men themselves might meet with the objection that it sprang from business self-interest, such an "initiative" instituted by a great body of the insured would have almost overwhelming weight with Congress and lead to speedy action. To use Mr. Kingsley's own words: "Therefore, it seems to me the first step is to ascertain the attitude of the millions of our citizens whose interests, through insurance, are profoundly affected by the present burdensome programme of taxation and regulation, and gravely threatened by recent decisions of the Supreme Court. Given an overwhelming verdict by the insuring public on a fair statement of the facts, and we shall need to do little work in Washington, and probably little in the States afterwards."

In order to resolve the doubt of some insurance executives, previously heard from, as to whether such an amendment to the Constitution as is proposed would after all free the insurance companies "from the injustices and multiplicity of regulations which now lie in the taxing and supervisory powers of the several States." Mr. Kingsley accompanies his letter with an opinion upon the subject which he has obtained from the distinguished Constitutional authority, former United States Senator John C. Spooner. This opinion is highly interesting in a number of ways. In the first place, it discusses the form that should be given to the Constitutional amendment, in order that it may prove most effective. He begins with the Joint Resolution already introduced in Congress, and known as the Weeks Resolution, from the name of its proposer. This resolution now reads: "Congress shall have power to regulate the business or commerce of insurance throughout the United States, its territories and possessions." Of this Senator Spooner says: "The words 'or commerce' should, I think, be omitted, because they add nothing. There should not be in such a provision an unnecessary word. This clause, so corrected, would give the whole business of insurance of every description, by whomsoever conducted, to the exclusive regulative authority of the Congress. The scope of an amendment, so phrased, is necessarily so extensive that it may well be doubted whether a sufficient number of the States would be willing to divest themselves of so important a jurisdiction."

To avoid this obstacle, Mr. Spooner proposes a more restricted amendment, in the following words: "Congress shall have power to regulate the business of insurance by a corporation in States other than that by which it was created." Of this phraseology, Mr. Spooner says: "By reason of my want of knowledge of the details of the insurance business throughout the country, I may misjudge its efficacy, but the object is to place the business of insurance corporations throughout the United States, whether domestic or foreign, exclusively within the regulative power of the Congress, but to leave the business transacted by domestic insurance corporations within the control of the State which created them in respect of the business done by them within her borders."

Mr. Spooner's discussion of the practical effects of such a grant of power to Congress is weighty and convincing in regard to the plenary control over interstate insurance conducted by corporations which Congress would possess. The analogy of the power to regulate interstate and foreign commerce, so often defined by the Supreme Court as regards the completeness of the authority given to the Federal Government, over against the States, serves to indicate the scope of the power to regulate insurance, should a Constitutional amendment grant that to Congress. It is, however, somewhat disappointing that Mr. Spooner should have passed over so lightly the possible effects of the police power, which the States would still retain, and of the power of taxation which would also unquestionably be theirs. It happens that in the business of insurance the opportunities for the exercise of the police power are very unusually numerous, inasmuch as insurance deals mainly with matters affecting the life, health and welfare of citizens of the States. Again, it is open to very grave doubt whether it is safe to assume, as Mr. Kingsley does, relying upon Mr. Spooner's brief expressions, that "insurance in all its forms * * * *ipso facto* will be relieved of all other governmental regulations and taxation except those imposed by the State of a company's domicile *on the business within that State*, or by way of taxation on real or personal property."

CERTAIN of the uncalculated effects of such social legislation as workmen's compensation are already beginning to show themselves in the State of New York. We have been hearing in the past fortnight from many directions of large employers of labor who are putting into operation means of reducing the risk and hence the cost of the new workmen's compensation law. Two factors stand out as enhancing the risk and the cost of workmen's compensation and of insurance against it. The first of these is the age or the physical condition or both of the worker; the second is the possible number of dependents the worker would leave to be compensated in case of a fatal accident,—or, in other words, the size of his family. It has come to our attention that large employers of labor have set about severe selection of their workers, with a view to avoiding these possibilities of expense. We have heard of one corporation employing several thousand workers which has made the rule that no worker over the age of forty-five or having more than one child is to be employed. We have heard of another corporation which will hereafter exclude workers with any children at all, and, as far as possible, all married workers. Thus workmen's compensation carries not only its own direct cost, but also the cost to the community of many workers capable of economic service, but excluded from opportunity by reason of circumstances, within or without their control, that make the selection adverse to them.

RULES ADOPTED BY NEW YORK STATE WORKMEN'S COMPENSATION COMMISSION

A PAMPHLET issued by the New York State Workmen's Compensation Commission bearing date of June 10, 1914, contains a roster of the commission and fifty rules adopted by it to govern the administration of workmen's compensation in the State. The rules, in full, follow:

* * *

1. Form of notices.—For notices of injury and of death required by section 18 of the Workmen's Compensation Act to be given the commission and the employer, blanks as per form Nos. C-1 and C-24, shall be provided; but any notice which furnishes substantially the information called for by such section shall be deemed sufficient whether upon such blank or not.

2. To what offices notices shall be sent.—All notices should be sent to the principal offices of the commission in the Capitol, Albany, New York, or should be sent to the office of the commission, No. 1 Madison Avenue, New York City.

3. Which statements under oath.—The notices of injury from the employe and from the employer and the statements made and signed by the attending physician or physicians shall be taken as and constitute part of the proof in all cases, though not under oath; a statement must be made under oath or by affirmation, of, and in regard to, every claim, and all statements offered to controvert the same must also be under oath or by affirmation. Other statements may be received though not verified.

4. Proof of average daily wages.—If the statements of the employer and of the employe as to his average daily wages, contained in their respective notices of injury, agree, the commission will, at its discretion, base its award upon such as the daily wages without requiring other evidence regarding the same; otherwise (and in every case if there be reason to suspect that the employe is of the class described in subdivision 3 of section 14 of the act) an investigation shall be made and such further evidence required as the commission may deem necessary to determine the average daily wages under the provisions of section 14 of the act.

5. Notice of presentation of claim.—Upon a claim for compensation being presented to the commission, there shall be mailed to the employer and to his insurance carrier a copy of the claim, together with notice that the same will come before the commission on a certain day and that an award may be made upon the evidence then in hand unless a hearing is demanded or an adjournment had.

6. Witness put under oath.—In any investigation, inquiry or hearing, by the commission or by a commissioner or by a deputy commissioner duly deputized to make the same, each person interrogated will, at the discretion of the commission, commissioner or deputy commissioner, conducting the investigation, be required to answer under oath (or by affirmation) and to produce any book or paper in his possession or custody pertinent to the inquiry.

7. Claim for compensation. Claims for compensation for disability or death shall be presented to the commission as required by section 20 of the act, upon blank form No. C-3 for disability, and blank form No. C-24 for death, which shall be filled out and sworn to (or affirmed) by the injured employe or a dependent or some one on his or her behalf, as the case may be, and mailed to the commission in the same manner as notices of injury or of death; but a writing which sets forth the claims shall not be rejected as insufficient because not upon one of such blank forms or because not verified.

8. Who may examine. Physical examinations may be made by the medical director or one of his assistants, by a district physician or by any other physician duly authorized by the commission or the medical director.

9. Who may inspect.—All inspection shall be made by the commission, by a commissioner, or deputy commissioner, or other person specially authorized by the commission.

10. Secretary shall digest the evidence.—When a claim shall be brought before the commission, the secretary shall present a digest of the evidence received upon the questions necessary to be determined by the commission with a list of all documents upon which the digest is predicated, and shall provide a copy of such digest for each commissioner. The original digest shall be marked by him so as to identify it with the claim and with the day when it was so presented, and shall be filed with the claim papers to which it refers.

11. Medical examination of claimants.—Whenever, through insufficiency of proof, it is deemed necessary, the commission or a commissioner or deputy commissioner may order the examination of a claimant by the local medical examiner. The report of such examiner shall be confidential. If able to do so, the claimant must present himself at the office of the local medical examiner for examination in case this is requested; if the claimant is not able to attend there, the local medical examiner must call upon the claimant. Any case calling for expert examination may be referred to a specialist, employed by the commission, for this examination.

The expense of all such examinations shall be paid by the commission at rates agreed upon by it and by the medical examiner in his contract of employment.

12. Order in dealing with claim. Upon receipt of a claim for compensation, the chief of the claim bureau shall determine if claimant's employer is insured, and, if so, with what insurance carrier and whether or not, on the papers in hand, the claim is compensatable. If so, it shall be docketed.

The papers, when complete, shall be analyzed by the chief of the claim bureau or his assistant and summarized for presentation to the commission. Such summary shall embrace findings of facts, offered to be passed upon by the commission, upon which its decision may be predicated.

13. Reference of claim to a medical director. Whenever, in the opinion of the chief of the claim bureau, it is desirable to have the opinion of the medical director upon the nature and extent of the injury, the claim papers shall be referred to him for his opinion thereon and for such further investigation as he may order.

14. Special investigation through deputies.—All cases of special investigation, other than medical, because of insufficient evidence, conflict of testimony, ambiguity, suspicion of fraud or simulation or malingering shall, unless otherwise ordered, be referred to the deputy commissioner for the district in which the claimant resides.

15. Reference of all commutations to the actuary.—All commutations for future payment of compensation shall be computed by the actuary or his assistant, using such interest, mortality, remarriage and other factors as shall be adopted by the commission for the purpose; the results of all such computations shall be reported to the commission and shall not be given out except as authorized by it.

16. Passing upon a claim.—With the copy of the claim to be sent to the employer and his insurance carrier, there shall be sent a notice of the day not more than ten days after the date of the notice of claim when the claim will come before the commission for consideration. If upon such day or any subsequent day to which such consideration may be adjourned, the evidence before the commission, either upon a hearing or without a hearing, establishes,

in its opinion, all the facts necessary to determine the right to compensation, the amount thereof and the persons entitled thereto, it shall make a decision in accordance therewith, granting or denying compensation, and shall make and file with such decision a finding of the facts upon which the same is made.

17. Action upon award by commissioner or deputy commissioner.—In a case where a commissioner or a deputy commissioner shall have made an award, decision or order, as provided in section 65 of the act, notice thereof shall be mailed to the employer, his insurance carrier and each claimant for compensation specifying the day upon which the same will be brought before the commission for approval and confirmation and upon such day or any subsequent day to which such consideration may be adjourned, the commission may approve and confirm such award, decision or order and order the same filed in its office or may modify the same, and, as so modified, approve, confirm and order it filed or may wholly reject the same and make its own award with or without further investigation or hearing.

18. Action upon report of arbitrators.—In case an arbitration shall have been instituted in regard to any claim under the provisions of section 20 of the act, upon receipt of the report of the arbitration committee, notices thereof shall be mailed to the employer, his insurance carrier and each claimant for compensation specifying the day upon which such report will come before the commission for consideration and upon such day or any subsequent day to which such consideration may be adjourned, the commission may adopt, modify and adopt as modified or wholly reject such report and make its award, with or without further investigation or hearing.

19. Hearing judicial but not formal.—Every hearing upon a claim, held before the commission, a commissioner or deputy commissioner, or an arbitration committee shall be conducted as a judicial proceeding, all witnesses testifying under oath or by affirmation, and a record of the proceedings shall be made and kept. Such hearing shall be conducted in such manner as to ascertain the substantial rights of the parties and the commission, commissioner, deputy commissioner or arbitration committee therein shall not be bound (see sec. 68 of the act) by common law or statutory rules of evidence or by technical or formal rules of procedure.

20. Stenographer's report of hearings.—The proceedings of every hearing before the commission or before a commissioner, deputy commissioner or board of arbitration shall be taken down by a stenographer appointed by the commission and a report thereof, certified by such stenographer to be a true and correct report of such proceedings and to have been carefully compared by him with his original notes, may be received by evidence with the same effect as if such stenographer were present and testified to the facts so certified.

21. Requisites to application for review.—The commission will not grant reviews of awards upon the application of a party or parties except such application be made upon the grounds of a change in conditions, as provided in section 22 of the act, and be accompanied with a verified statement of the facts alleged to constitute such change of conditions; but upon its own motion it will exercise its continuing jurisdiction over each case and for reasons deemed by it to be sufficient will, from time to time, make such modification or change with respect to its former findings or orders relating to any such case, as in its opinion may be just, including the making of awards in cases where they have been denied.

22. Docketing of papers.—The notice of injury or other notice or paper relating to an injury first coming to the attention of the commission shall be docketed and given a number; and each paper thereafter filed in connection with such injury shall be entered upon this docket and be given the same number as the paper first received.

23. Employes receiving or disbursing money to give bond.—All employes of the commission, who shall be authorized to receive or to disburse moneys for, or on behalf of, the commission, shall give to the commission and maintain with it a bond or undertaking in such amount as may be fixed by the commission, signed by two sureties or by a corporation duly authorized to transact the business of fidelity insurance in the State of New York, subject to the approval of the attorney general as to form and of the comptroller as to sufficiency.

24. What employers and what employes subject to the act.—The commission for the purpose of the state insurance fund and of carrying into effect the provisions of this chapter construes:

(1) That section 2 of the act means that each employer who shall be adjudged by the commission to be conducting a hazardous employment, as defined in such section, is required by section 50 of the act to secure the payment of compensation at the scale provided in the act for injuries to or deaths of employes engaged in his service upon the premises or at the plant where such employment is carried on, or in the course of employment away from such plant, due to accident arising out of and in the course of employment by him; and all orders, decisions and awards will be made, and all policies of the State fund will be issued, upon this basis.

(2) That every generic name of employment in the groups enumerated in section 2 of the act, was intended by the legislature to cover and designate broadly all hazardous employments of the general nature and character indicated by such name which are not elsewhere in such groups specifically mentioned and that the commission is vested with the power and duty to determine, for the purpose of carrying the provisions of the act into effect and for the purposes of the state insurance fund, which employments are included under such generic name.

(3) That the word "manufacture," wherever found in section 2 of the act, includes, unless the contrary is plainly indicated, not only manufacture of each material named, but also the manufacture of the same, as the sole or chief component elements, into articles for use carried on by the employer for pecuniary gain.

(4) That the words "manufacture" and "construction" and other words of like import include repair when carried on as, or as a part of, "a trade, business or occupation carried on by the employer for pecuniary gain."

25. Rules for computing weekly wages.—The rules for determining the average weekly wages under the provisions of section 14 shall be as follows:

(a) If there be no dispute as to average daily wage or salary, multiply same by 300 and divide by 52.

(b) If the average daily wage or salary be established under the provisions of subdivision 1 or 2 of section 14 of the act, multiply same by 300 and divide by 52.

(c) If the average annual earnings be established under the provisions of subdivision 3 of section 14 of the act, divide by 52.

(d) If facts be established as per subdivision 5 of section 14 of the act, modify average daily wage or salary as found by (a), (b) or (c) in accordance with the facts established by such evidence, such modification however to affect the compensation only from the day when the employe reaches (or if deceased, would have reached) the age of twenty-one or a later day after which in the opinion of the commission his wages or salary would have been so increased.

26. Revision of award for reduction of earning capacity.—In determining the difference between the average weekly wages of an employe and his wage-earning capacity after an injury in the

same employment or otherwise under subdivision 3 or subdivision 4 of section 15 of the act, the difference between such wages after such injury may, in the discretion of the commission, be made the basis for its award of compensation for partial disability, subject however, to modification thereof upon a proper showing under section 22 that such actual wages so received after the injury are no longer paid and do not correctly represent the reduced wage-earning capacity of the injured employe.

27. Ruling as to lien for physician's services, etc.—For the purpose of carrying into effect the provisions of the act, the commission construes that portion of section 24 thereof which makes claims for services or treatment rendered or supplies furnished pursuant to section 13 thereof a lien upon the compensation awarded, to mean and apply, only to claims approved by the commission, for services, treatment or supplies for which the employe may have incurred liability but for which under the provisions of such section the employer is not liable.

28. Time for making periodical payments.—All periodical payments for compensation shall be made bi-weekly on alternate Mondays, except as the commission may otherwise order.

29. Method of paying compensation.—All insurance companies issuing policies to enable an employer to secure the payment of compensation under subdivision 2 of section 50 of the act and all employers who shall secure the payment of such compensation under subdivision 3 of such section shall make payment of the same to the commission in cash or by check or draft drawn upon a New York City bank or trust company for each item of compensation so payable, and the commission shall disburse the same by its own checks embracing the proper voucher therefor; provided that any such insurance company or employer may instead, make and maintain at all times with the commission such cash deposit as will, in the opinion of the commission, secure the prompt and convenient payment of such compensation and authorize the commission at its discretion and without liability for the exercise thereof to pay out of such deposit all compensation awarded by the commission to be paid by such insurance company or employer and engaging to replenish such deposit promptly on demand by replacing all sums so paid out.

30. When commuted and sued for.—In all cases of resistance to the award of the commission by refusal or neglect of the employer or the insurance carrier to pay compensation, persisted in longer than ten days, the commission will, if convinced that such refusal or neglect is without good cause or excuse, and in any case may, compute the present value of all compensation so awarded and declare the whole amount thereof due and enforce the payment thereof with the added penalty of 50 per centum as provided in section 26 of the act.

31. Paying present value into state fund.—The commission will require, under the provision of section 27 of the act, every insurance company issuing policies under subdivision 2 of section 50 of the act to secure the payment of compensation and every employer securing the payment of compensation under subdivision 3 of section 50, to transfer to the state insurance fund all further liability under such awards by paying amounts equal to the present values, computed by the commission with due regard to life contingencies, of all future payments in the following cases:

(1) Every case of death, involving periodical payments.

(2) Every case of total permanent disability.

(3) Every case of permanent partial disability consisting of a specific injury scheduled in subdivision 3 of section 15 of this act, the period of payment of compensation for which exceeds one hundred and twenty-eight weeks or longer.

(4) Every other case of permanent partial disability, the compensation for which shall not be commuted.

(5) Every case of temporary total disability or temporary partial disability, regarding which, in the opinion of the commission, good cause exists why such should be required.

All sums so paid in shall be received and held in the State insurance fund, the aggregate amount thereof to constitute a trust fund to provide for the payment of all awards of compensation of which the same were computed to be the commuted values, the payment of which out of such aggregate trust fund or otherwise will be assumed by the state fund and such insurance corporation and employers shall be discharged from any further liability under such awards.

Unless good cause exist in the opinion of the commission, for requiring otherwise in a particular case or cases, no disability shall for the purpose of this rule be deemed finally adjudged permanent and no order will be made to pay into the state fund an amount equal to such commuted value, until six months shall have elapsed after the injury; but during such period of six months the compensation shall be paid to the commission and be disbursed as provided by section 25 of the act.

32. Methods of paying compensation.—To assure that compensation and benefits are actually paid only to injured employes or their dependents or, in case of minority, incompetence or other legal disability, to a guardian, committee or other person charged with or assuming the burden of the care and support of such employe or dependent, all payments of compensation and benefits shall, at the discretion of the commission, be made in one of the following ways:

(1) By making the check of the commission directly payable to the person entitled to the compensation and paying the same over to him.

(2) By drawing a voucher against the state treasurer upon the state insurance fund, so as to be so payable, and so paying it over.

(3) By so paying such compensation or benefits in cash, taking proper receipt therefor, signed by the employe, dependent, guardian, committee or other legal representative.

33. Commuted value demanded of insolvents.—In case of the insolvency of an employer or of an insurance carrier, the commission shall at once proceed to compute the present value of all future payments of compensation to be made by such insolvent, with due regard to life contingencies, as provided in Rule No. 22 and shall require the same to be paid into the state insurance fund under the provisions of section 27 of the act, making claim for the whole of the same as a preference or lien upon the assets of such insolvent under the provisions of section 34 of the act.

34. Physician's fees, etc., need not be insured.—The commission rules that section 50 of the act requires the employer to insure only the payment of compensation as defined in subdivision 6 of section 3 of the act, i. e., of compensation to employes and their dependents including funeral benefits, and does not require him to insure the payment of the cost of "treatment and care of injured employes" provided for by section 13 of the act, but liability under section 13 may be insured at the option of the employer.

35. Policies of companies must insure all entitled.—The commission rules that no policy of insurance will be accepted as compliance with section 50 of the act, which shall not insure the payment of compensation to all persons entitled to compensation under the act.

36. Condition to remitting penalty for non-compliance.—Penalty for failure to comply with the provisions of section 50 of the act shall in no case be remitted unless the employer shall secure in a manner satisfactory to the commission the payment of all com-

pensation as provided by the act, payable because of accidents to his employes prior to his so complying or shall pay into the state insurance fund the present value thereof, as computed by the commission as provided in section 27 of the act.

37. Commission to supply blanks.—The commission shall prepare a full and complete set of blank forms as required by section 76 of the act and distribute the same or cause them to be distributed so that they may be readily available and especially to all employers who shall have insured under the provisions of section 50 of this act, that they may be able to keep on hand a sufficient supply thereof.

38. Expense accounts of commission.—In view of the requirements of section 94 that after the year 1916 the expense of administering the state insurance fund shall annually be refunded to the state by it and that after such year also the expense of examination, determination and payment of claims shall be apportioned among the insurance carriers, including the state insurance fund, in proportion to the compensation paid by them, and be refunded annually to the state by them, the accounts shall be so kept during the years 1914, 1915 and 1916, as well as thereafter, in order that these various items of expense can be segregated, to the end that, when required, such segregation may be made readily and accurately and that the burden of such expenses upon the state during such period may be correctly estimated.

39. Classifying employments of a single employer.—The commission will classify all the employments of an employer when such are associated, in one group under the provisions of section 95 of the act for the purposes of the state insurance fund, under the provisions of section 96 of the act for associations for accident prevention and under the provisions of section 97 of the act for purposes of accounting and dividends; but in computing premiums, so far as may be deemed advisable, the payrolls of the different employments shall be dealt with separately and, if the businesses, trades or employments of the employer are dissociated and readily and completely separable, they may be classed each in its respective group for all purposes.

40. How interstate and foreign commerce employers may comply.—The commission will upon application furnish blanks and prescribe methods by which employers engaged in interstate or foreign commerce and their employes working only in this state may by agreement accept and become bound by the provisions of the act, so far as not forbidden by any act of congress, in like manner and with the same effect in all respects as provided in the act for other employers and their employes; and upon the execution of such agreement, the return to the commission of such blanks duly filled out and signed and compliance with the methods prescribed by it, the commission may approve the same, upon which approval it shall go into effect.

41. Hours of sessions.—The sessions of the commission commence every day at 10.30 o'clock a. m. and continue with such intermission or intermissions, if any, as the commission may order, until it shall by the vote of a majority of the members present adjourn for the day.

42. When physician's bill not to be considered.—If an attending physician shall refuse to fill out, sign and forward the reports requested by the commission or to itemize his bill for fees or verify the same by his oath or affirmation, his claim for medical services to an injured employe shall not be considered for approval until he shall have complied with such requirement.

43. Employes insured in state fund.—All policies of the state insurance fund shall be issued so as to cover all the employes upon the premises, or at the plant or upon the business of the employer away from the plant; premiums shall be computed and collected upon a payroll including the salaries or wages of all such employes and compensation at the rates provided in the act shall be payable out of the state insurance fund, when and as such compensation shall be awarded by the commission and ordered to be paid, in respect of every employe to whom payment of compensation is so assured.

44. Premiums payable to state fund.—The policies of the state insurance fund shall continue in force during successive periods of six months and the employer shall be liable for the premium therefor unless such employer, not being in arrears for premiums due the fund, shall within thirty days of the expiration of the then current six months' period give written notice to the commission of his intention to withdraw and shall also comply with subdivision two or three of section 50 of the act.

45. How disbursements from state fund made.—All disbursements of compensation by the state insurance fund shall be made by voucher authorized by the commission and signed by any two members thereof and shall be paid out of such fund by the state treasurer upon the presentation of such vouchers, properly signed, witnessed and endorsed.

46. Monthly session to consider report of state fund.—The commission shall devote the session in the second Wednesday of each month or so much of it and of as many other sessions as may be required, to consideration of a report of the transactions of the state insurance fund during the previous calendar month and during the expired portion of the calendar year including that month and of its financial condition, including its investments and its funds in hand available for investment; and shall make such orders concerning the transaction of the business of the state insurance fund and adopted such resolutions concerning the investment of its funds and the sale of its securities, in both cases subject to approval by the comptroller, as it may deem advisable.

47. Form of state fund accounts.—The accounts of the state insurance fund shall be kept so as to comply with all the requirements of section 97 of the act and specifically so as to enable the receipts from each class and the disbursements, including reserves, on its account and the amount so received from each employer and the disbursements, including reserve on his account, to be separately set forth in the books of account with a view to ascertaining whether a dividend has been earned and is safely apportionable and, if so, among which insured employers of the class it should be apportioned.

48. Readjustment of premium payroll to state fund.—The readjustment of the semi-annual premium paid in advance to the state insurance fund, required by subdivision 3 of section 97 of the act, shall be based upon the sworn statement of the employer as to the wage expenditure for such period of six months as required by section 101 of the act or upon an audit of his books by direction of the commission as provided for in such section or upon both such sworn statements and such audit, as the commission may, in its discretion, require.

49. Time for paying premiums to state fund.—For every employer insuring with the state insurance fund from July 1, 1914, the advance semi-annual premium must be paid on or before such day as required by section 98 of the act and theerafter semi-annually within ten days after the mailing of the notice by the commission, specifying the amount of the same. For every other employer insuring with the state insurance fund the advance semi-annual premium must be paid on or before the day when such insurance is to go into force and thereafter semi-annually within ten days after the mailing of notice by the commission, specifying the amount of the same. Provided always that the commission may, in its discretion, extend the time for the payment of any premiums.

50. Repeal, amendment or adoption of rules.—The rules of the commission are subject to repeal or amendment or to the adoption of any new rule or rules at any time by the vote of a majority of the commissioners present at any meeting.

MR. DARWIN P. KINGSLEY DEFINES THE OBJECTIVE OF HIS CAMPAIGN FOR FEDERAL REGULATION OF INSURANCE

To the Editor of the Market World and Chronicle:

SIR:—My attention has been called to a letter in your issue of the 12th of July, signed "Scrutator Rerum," and your editorial comments thereon.

I think my work with regard to securing Federal control of interstate insurance has been reasonably direct and scarcely need any explanation. I pursued the belief that insurance, interstate in its character, is commerce, to a finality, and, as you recall, the verdict of the Federal Supreme Court (divided for the first time) was that it is not commerce, and that of course ended the discussion.

While it is true that the Joint Resolution now pending in Congress was not introduced at my instance, I have become convinced that the only relief in sight for insurance is in a suitable amendment to the Constitution.

I enclose, herewith, communication which I am now sending to heads of all the insurance institutions in the United States, together with an opinion from the Hon. John C. Spooner. I appreciate, under the language of the amendment suggested by Mr. Spooner, that there would still be some measure of conflict between the authority of the State in which a company is domiciled and the Federal authority. It seemed to me, however, better to submit the question in this form to the companies because it will probably be easier to secure an amendment reserving to the States the right to supervise the business within their own domain.

Frankly, I myself believe that the whole business ought to be taken over by the Federal Government, so far as control and supervision and taxation are concerned, and no measure of authority left to the States whatever; but that is a condition which it hardly seems wise to fight for at the present time.

The amendment suggested by Senator Spooner will relieve us of about 99 per cent of our present troubles and most of the dangers that theaten the future under recent decisions of the Supreme Court.

You will observe, if you read my letter and the Senator's opinion, that my plan really follows the lines of what we know as the Initiative.

There are several "IFS" in the road:

1st. The matter will be submitted to the insured if the great majority of insurance executives of the country approve of that suggestion.

2nd. It will be submitted to Congress and a Joint Resolution asked for if the great body of the insured vote in favor of it.

So we are some distance yet from the real issue.

My reason for taking this position is, I think, fairly well stated in my letter. I am unwilling to take whatever measure of responsibility may fairly be mine in such a movement without ascertaining in advance what kind of backing the movement will ultimately have from the people whose property, business and plans for the protection of their families are most directly involved. Yours truly,

D. P. KINGSLEY, President.

New York, July 15, 1914.

NOTES ON INSURANCE, AMERICAN AND FOREIGN

Amend Massachusetts Law.—Amendments materially increasing the benefits payable under the State's Workmen's Compensation law have been passed by the Massachusetts Legislature and approved by the Governor. They become effective on October 1, next. The principle changes effected in the law are thus stated by "The Standard" of Boston:

Section 5 of Part 2 of the law providing for reasonable medical and hospital services and medicines for an injured employe during the first two weeks after the injury, is amended so as to provide, in addition, that if the employe is not immediately incapacitated from earning full wages, such medical and hospital service shall be furnished from the time of such incapacity and, when needed, for a longer period in the discretion of the industrial accident board. In case of emergency or some other justifiable cause, the employe may call in his own physician, whose fees are subject to the approval of the board.

Section 6 is amended to increase the weekly payment to dependents, in the case of the employe's death, from one-half to two-thirds of the average weekly wage, and the period of payment is increased from three hundred to five hundred weeks, the maximum amount being fixed at $4,000.

Section 7 is amended to include, among dependents, a wife living apart from her husband for justifiable cause or because he had deserted her, and children by a former wife or husband.

Section 9 is amended to increase the weekly payments for total incapacity from one-half to two-thirds of the average weekly wage, and the maximum amount from $3,000 to $4,000.

Section 10 is amended to increase the payment for partial incapacity from one-half to two-thirds of the difference between the average weekly wage before and after the accident, the maximum indemnity being increased from $3,000 to $4,000.

Section 11 is amended to increase the weekly payments for loss of limb from one-half to two-thirds of the average weekly wage, the maximum indemnity to be as before. Reduction to one-tenth of normal vision in both eyes, with glasses, to count as irrecoverable loss of sight. Also, in case of loss of phalange on both hands or both feet, compensation is to be paid for twelve weeks for each hand or foot.

Section 13 is amended to provide for payment of legal representative of deceased employe, when the appointment of such representative is necessary.

Section 22 is amended to provide for payment of compensation in a lump sum at any time in the case of a minor permanently disabled.

Section 5 of Part III of the act is amended to provide for arbitration in case of disagreement as to continuance of weekly payment. Also to provide for filling vacancy on committee of arbitration.

Section 8 of Part III is amended to provide for the reimbursement of sums paid out by the board for the employment of an impartial physician to examine an injured employe.

Former section 12 of Part III is replaced by a new section allowing the board to review any weekly payment under the act and issue any order it deems advisable.

Former section 13 of Part III is also replaced by a new section subjecting fees of attorneys, physicians and hospitals to the approval of the board and providing for arbitration in case of disagreement as to the proper fee.

Section 2 of Part V is amended to exclude specifically masters of and seamen on vessels engaged in interstate or foreign commerce.

Part II is amended by a new section providing for the payment of interest on sums awarded as compensation by the supreme court.

Part V is amended by the addition of four new sections requiring companies to furnish statistical information to the board; defining "personal injury"; providing for the establishment of not more than four branch offices of the industrial accident board, and for the appointment by the board of a medical adviser.

A new section, 16, provides that all insurance rates on file and approved shall continue in force unless the insurance commissioner withdraws his approval.

A resolution adopted by the joint committee on judiciary of the legislature in favor of the appointment by the Governor of a commission to consider and report upon the questions of monopoly and rates in insurance has been adopted by the legislature in a slightly amended form, and takes the place of two bills recommended by the Governor for enactment, one to make insurance a commodity within the meaning of the State anti-compact law, and the other to make the Massachusetts industrial accident board a court of appeal from the decisions of the insurance commissioner as to the adequacy of workmen's compensation rates. As adopted by the legislature the resolution reads:

"Resolved, That the Governor, with the advice and consent of the council, shall appoint a special commission of three persons, one of whom shall be the insurance commissioner, to investigate the practises of insurance companies and their rates in workmen's compensation and other insurance, with a view to determining whether or not any monopoly or combination exists in the insurance business; also, whether the rates charged by the insurance companies for workmen's compensation and other insurance are reasonable, and to what extent Government regulation of insurance rates is desirable.

"The commission shall serve without compensation, but may incur such expenses, not exceeding four thousand dollars, as the Governor and the council may approve."

* * *

Accident Insurance Without Death Benefit.—The "Western Underwriter," of Chicago, says that, commenting on reports that the Continental Casualty Company, of Chicago, would soon issue a new accident and health policy, devoid of death benefits, the officials of that company state that such a plan has been under advisement for the past six months and that it is possible that definite action will be taken some time during the Summer. For several years the company has been making a study of conditions abroad, especially in Germany, and if the proposed plan goes into effect it will introduce for the first time in the United States, pure infirmity insurance, somewhat after the form in use on the Continent. No stipulations will appear anywhere in the contract as to the cause of the accident or the nature of the disease, the policy undertaking simply to pay a weekly indemnity to its owner in case he is physically unfit to attend to his duties. Nothing additional will be given in the way of frills, or in case of death, the plan being only to provide against loss of time.

The company's officials believe that there is a call for such a form of insurance and that it will solve the present difficulties in the health and accident business. They point out that the business has drawn away from its original purpose—that of providing against loss of time—until to-day people are taking out policies not for protection against possible loss of time, but on the gambling prospect of a large sum of money for their beneficiaries in case of accidental death. The Continental Casualty officers believe that this belongs more properly in the field of life insurance. If the plan goes through, the life insurance men of the country will be given a chance to handle the infirmity policy in connection with their life business, thus giving them two classes of policies covering every contingency.

In formulating the plan the Continental has been making careful study of German statistics as well as the statistics gathered from its own experience. In foreign countries, infirmity insurance is the prevailing form of health and accident protection, no attention being paid to the cause of disability. It suffices if the assured is incapable of attending his work. There are no American laws on this particular form of insurance and, in case of its introduction into this country, the Continental will have to assume the lead in securing the construction the courts will place on the form. Because of the very novelty of the plan, the company is proceeding with care and cannot be said yet to have decided fully upon a definite course of action.

* * *

State Insurance for Workmen's Compensation Broached in England.—There have been various rumors of late that the programme of social insurance in England was to be extended to the substitution of State insurance for private insurance in the field of workmen's compensation. A recent paragraph in the "Insurance Journal and General Financial Record" gives the latest concrete information on the subject. It runs as follows:

"Insurance companies are naturally much interested in the announcement that the Government has agreed to appoint a committee to consider not only the working of the Workmen's Compensation Act, but also whether it would not be a better plan to have a State insurance of employers against compensation risks of all kinds. Such an inquiry may now yield more definite results than it could have done a few years ago, for the companies transacting this description of business have in the interval gained much valuable information for their guidance—information which, let it be added, has cost the companies heavily. The Workmen's Compensation Act, which greatly extended the provisions of the first Compensation Act, came into force in July, 1907, and from 1908 to 1911 inclusive, big debit balances were common. In 1912 the companies on their aggregate figures managed to record a profit, and it is probable that the total figures for 1913 would also show a balance on the right side. Premiums have been steadily raised, but so have the claims, and even to-day only those companies make a profit which exercise the utmost discrimination in accepting business."

* * *

An Experienced English View of the Cost of Workmen's Compensation in the United States.—In submitting the annual report at the thirty-third annual meeting of the Employers' Liability Assurance Corporation, Limited, in London, Lord Claud Hamilton, Chairman of the Board of Directors, made the following prophecy as to the future development of workmen's compensation insurance costs in the United States:

"For some years now I have given you statistics as to the growth of the cost of workmen's compensation claims [in the United Kingdom]. This growth has, as you may suppose, caused us considerable anxiety, and has necessitated a continuous rise in rates. I think I may say that, as far as this corporation's experience goes, we have now nearly arrived at a level of cost and that there is a tendency to show that the average cost of settlement per claim is pretty well known to us. Bearing in mind that the cost of settled claims was, up to the end of 1908, £7 16s. per case, and has now increased to £10 2s., the fact becomes of great interest to us in connection with our business in America, where Workmen's

Compensation Acts have come, and are coming, into operation in many States.

"There is no reason why American human nature should be different from British, and therefore we may look in that continent for a steady rise in the cost of claims (whether the State or the insurance companies insure the employers), and equally for a steady rise in rates."

* * *

National Association of Insurance Agents' Programme.—The programme for the nineteenth annual convention of the National Association of Insurance Agents, to be held in Minneapolis on August 17 to 19, is announced as follows:

OPENING SESSION, MONDAY, 11 TO 12 O'CLOCK.

Address of Welcome—Mayor Wallace G. Nye, of Minneapolis.

Response—Thomas C. Timberlake, Louisville, president Kentucky Association of Insurance Agents.

President's Address—C. F. Hildreth, Freeport, Ill.

Address—"Agents' License and Qualification Laws," J. A. O. Preus, Insurance Commissioner, St. Paul, Minn.

Reports—Executive Committee: E. C. Roth, chairman, Buffalo. Legislative Committee: George D. Markham, chairman, St. Louis. Joint Conference Committee: C. H. Woodworth, chairman, Buffalo. Grievance Committee: J. K. Livingston, chairman, Detroit. Organization Committee: F. E. Warner, chairman, Salem.

Appointment of committees:

Note.—The Committee on Nominations and the Committee on Resolutions are formed by the selection of one delegate for each committee from each of the State associations represented in the convention; said selections being made by the delegates present from the various States. The delegates are requested to make their selections early and hand the nominations to the secretary as soon as possible.

Introduction of resolutions.

Note.—All resolutions introduced are referred to the Committee on Resolutions for consideration, but if desisred, may first be discussed on the floor.. Resolutions introduced in the final session will be referred to the incoming Executive Committee.

Monday afternoon, 3 o'clock, motor ride, supper at Country Club.

SECOND DAY, TUESDAY MORNING, 10 O'CLOCK.

Address—"Jumbo Lines and Reinsurance Treaties," James J. Joseph, vice-president Sterling Fire Insurance Company.

Discussion—Distribution of Lines and Exchange Business: Is Further Legislation Necessary?

Address—"Underwriters' Agencies," Rufus M. Potts, Superintendent of Insurance, Springfield, Ill.

Discussion—How Can Agents Best Assist the Companies and Insurance Commissioners to solve this question?

Discussion—State Legislation and Regulation: Is There Over-Legislation on Insurance? If So, What Is the Remedy?

Discussion—Experience Under State Agents' and Brokers' License Laws.

Discussion—Overhead Writing and Outside Brokers.

Introduction of resolutions.

CASUALTY SECTION, TUESDAY AFTERNOON, 2 O'CLOCK.

Election of chairman and secretary.

Organization of section.

Discussions—(1) Workmen's Compensation. (2) State Insurance. (3) Advantages of Casualty Lines to Fire Agents. (4) Co-operation of Companies, Agents and General Agents. (5) Best Methods of Extending the Association's Casualty Work.

General business.

THIRD DAY, WEDNESDAY MORNING, 10 O'CLOCK.

Address—"Co-operation of Insurance Interests," W. S. Diggs, Cincinnati, president Ohio Insurance Federation.

Discussion—How Can the General Interests of the Business Be Advanced by Concerted Action Among the Various Insurance Organizations?

Discussion—Unauthorized Insurance.

Discussion—Uniform Blanks.

Discussion—Return Commissions in Defunct Companies.

Introduction of new business.

AFTERNOON SESSION, 2 O'CLOCK.

Report of Committee on Resolutions.

Discussion.

Report of Committee on Nominations.

Discussion—National Regulation of Insurance.

Discussion—Uniform Credit Rules.

Invitation for next annual meeting.

Adjournment.

* * *

How Accidents Happen.—There comes to hand an interesting pamphlet issued by the Rochester (N. Y.) Chamber of Commerce on accident prevention, the text of which is "Make Haste Slowly." It is set forth in detail how accidents happen in unexpected places and at unexpected times, and much valuable advice is given for their avoidance. In substantiation of the general argument, there is included a tabulation of 100,000 accidents taken from the records of leading accident insurance companies and showing the number of accidents under various classifications and the amount paid by the insurance companies in benefits on account of these accidents. This tabulation is as follows:

100,000 ACCIDENTS.

(Copyright, 1912, by the Rochester Chamber of Commerce, Reprinted by Permission.)

Classification.	Number.		Amount Paid.	
Travel accidents:				
Railroad	24,936		$1,962,022.84	
Street car	4,356	29,726	384,988.90	$2,432,245.60
Steamboat and steamship	434		85,233.86	
Falls on pavement	8,222		523,876.43	
On stairs or steps	3,101		235,569.99	
From ladders or chairs	1,946	18,367	143,432.86	1,273,559.73
Through trap doors	729		62,561.20	
Miscellaneous falls	4,369		302,119.25	
Carriage and wagon accidents	5,024		462,386.54	
Horse kicks or bites	1,520		79,281.81	
Horseback riding accidents	1,220	8,135	141,211.91	698,097.72
Horse stepped on foot	371		15,217.46	
Cut with edge tools or glass		4,678		128,471.53
Fingers crushed in various ways		4,217		111,245.91

Highest Court Upholds New Jersey Compensation Law.—The constitutionality of the New Jersey workmen's compensation law has been upheld by the State's Court of Errors and Appeals. It was the first time the State's highest court had passed on the measure. The case was that of Mrs. Elizabeth Sexton against the Newark District Telegraph Company. Her husband was killed while in the company's employ.

* * *

Mr. Senior to Manage Rating Board.—The Governing Committee of the Compensation Inspection Rating Board, of New York, announced yesterday the appointment of Leon S. Senior as manager of the board, the appointment to take effect immediately upon the acceptance of Mr. Senior's resignation as chief examiner of the Workmen's Compensation Bureau of the State Insurance Department. The board has appointed as assistant manager Charles S. Fowler, formerly Second Deputy in the State Insurance Department, and as Chief Inspector, J. A. McKinnon, who has had extensive experience as a safety engineer.

INSURANCE NEWS IN THE WEST

Delay Underwriters' Agencies' Fight.—Superintendent Rufus M. Potts, of Illinois, decided not to ask the Federal district court at Springfield to dismiss the petition for injunction filed by the fire insurance companies operating underwriters' agencies in Illinois. Had he moved to dismiss, the question of his right to put the underwriters' agencies out of business would have been fought out on that motion. As it is, he is expected to file an answer on July 20. It was originally arranged that if he answered the petition the case would be argued on July 27, but that plan may have to be changed as there is a probability that the presentation of the evidence would consume more time than the court can give to the case at that time.

* * *

Dismal Outlook for Legislation.—A prominent fire insurance manager of Chicago a few days ago was discussing the outlook for legislation the coming Winter. His view was rather pessimistic. He feels that at the present time the relations between the companies and the agents are such that the companies have not much to look forward to. In his opinion the legislation of next Winter will be dictated by the local agents, so far as any of the insurance interests have influence. If the agents and the companies differ as to what should be done, so much the worse for the companies, in his judgment. And unfortunately the differences at this time are marked. He said that if any agency could get the agents and the companies together, it would perform the most valuable service that fire insurance has received in some time. He believes—and he says many other managers do also—that the annex question and the practice of writing large lines and reinsuring a good part of them in foreign companies is at the bottom of the trouble, and he fears that agents in their efforts to gain their own wishes in regard to these questions are likely to start legislation which will prove detrimental to the companies.

* * *

Crucial Period for Casualty Agents.—Wade Fetzer, president of the National Association of Casualty and Surety Agents, has sent out a strong appeal to the members and to others engaged in the business to attend the annual meeting at White Sulphur Springs, W. V., from September 21 to 25. His call is based almost exclusively on the menace of monopolistic State insurance of workmen's compensation. He points out the States in which this system already is in force and the liability business of the agents is almost or quite ruined, and the States in which State insurance sentiment is strong and the danger that agents in those States will suffer a similar loss. He points out that casualty agents are on the eve of a great increase or a great decrease in business, by reason of the enactment of compensation laws, and calls upon them to get together through the association and by co-operation with the companies represented in the International Association of Casualty and Surety Underwriters, prepare to fight for their business in the most effective way possible.

* * *

Will Open Chicago Office.—The Hartford Accident and Indemnity will open a branch office at Chicago. This is the announcement made this week in Chicago, by General Manager Norman R. Moray, which will put at rest the various speculations as to the company's probable plans for the city. Mr. Moray says the company will open a branch office in the Insurance Exchange, where most of the brokers and local insurance agencies are located. Dugan & Carr, Western managers of the Hartford Fire, will be managers of the Chicago office, but they will not attempt to handle its details. It will be directly in charge of an experienced casualty and surety man as superintendent. It is for the purpose of selecting this superintendent that Mr. Moray visited Chicago at this time. The Chicago office will not be a Western department in the sense in which the fire company maintains a Western department. The larger agencies of the West will not report to Chicago, but to the home office. Yet the Chicago office will do the underwriting for the smaller agencies in considerable territory, although the exact field is not yet determined and it may not have exact geographical bounds. Mr. Moray says the company has taken more than six months to consider the best method for handling Chicago, as it wanted to make no mistake.

* * *

Accident Frills Costly.—Advices from Seattle point out the danger of accident policy frills. William H. Pierre had a $5,000 accident policy in the Kansas City Casualty. It provided for beneficiary insurance in event of death of the beneficiary under certain named conditions including being within a burning building. Mrs. Pierre was giving her baby a bath when her clothing caught fire and burned her so badly that she died. The fire also communicated to the furnishings of the room. Mr. Pierre made claim for $5,000 under the beneficiary clause, setting up that the beneficiary met her death on account of being in a burning building. The company contended that it was not the intent of the policy to cover such a case, but the jury decided in favor of the claimant and the supreme court of Washington has affirmed the verdict.

* * *

Drafting Compensation Law for Missouri.—The Missouri Workmen's Commission, which investigated the working of the compensation laws of the Far Western States last year, has just completed a tour of the Eastern States having such laws, and has now returned home to begin work on its draft of a bill for presentation to the legislature next Winter. There is much interest as to the form of law it will recommend, but very little information is available. There is said to be considerable State insurance sentiment in Missouri, and it also is reported that strong opposition to a workmen's compensation law of any kind exists among labor organizations in St. Louis. This is thought to have been instigated by some interests which would be adversely affected by such a law, presumably a class of lawyers.

* * *

May Change Washington State Law.—Considerable overhauling of the workmen's compensation law of Washington appears likely at next Winter's legislative session. The present law was enacted before that of other States, and its makers had not the advantage of the laws of other States as models. The industrial insurance board, which is in charge of its administration, has been making a careful study of it in the light of experience gained under its operation and expects to offer a number of amendments. It probably will seek for a medical aid provision, also a readjustment of rates on various classes and the merger of a number of classes under which there are so few risks insured that it is impossible to get an average on them. James F. Cassidy, a prominent labor unionist of Seattle, has come out in a bitter attack on the law, claiming that by reason of the flat rates prescribed, employers have no pecuniary object in expending money to prevent accidents, with the result that accidents have increased in the State 130 per cent since the compensation law went into effect. He says the laboring men do not get sufficient compensation under the law, that they are thrown upon the mercy of politicians who administer it, and that there is no hope for relief under it as it exists at present.

LA SALLE.

Chicago, July 17, 1914.

ITEMS OF INSURANCE NEWS.

The Massachusetts Legislature has passed a Metropolitan Fire Hazard Act which provides for the appointment by the Governor of a Fire Prevention Commissioner. All existing powers, in whatever officers, other than the courts, relative to the regulation and licensing of the storage of explosives, oils, etc., are to be vested in the commissioner, who in addition to these and other powers, is given power to make orders and rules relating to fires, fire protection and fire hazard binding throughout the metropolitan district, or any part of it. The words "Metropolitan District" as used in the act include the following cities and towns and the territory comprised in them: Arlington, Belmont, Boston, Brookline, Cambridge, Chelsea, Everett, Lynn, Malden, Medford, Melrose, Milton, Newton, Quincy, Revere, Saugus, Somerville, Waltham, Watertown, Winchester, Winthrop, and Woburn, but the act may apply to any other city or town which accepts its provisions.

The American Association of Accident Underwriters through its executive committee, has made Captain Samuel Clark, president of the Royal Casualty Company, a member of that committee, vice George E. Dickson, whom he succeeded as president. Ernest W. Brown, of the Inter-State Business Men's Association, was made chairman of the committee, succeeding E. T. Swobe, of the National Fidelity and Casualty of Omaha, who is retiring from the business. H. C. Pegram, secretary of the Midland Casualty; E. W.Brown and Arthur James, manager of the casualty department of the Wisconsin National Life, were named a committee to prepare plans for the proposed merger of the accident insurance organizations of the country.

The following committee appointments have been made by Clarence F. Low, president of the South Eastern Underwriters' Association: Executive committee, W. E. Chapin, chairman; G. W. Babb, Dowdell Brown, H. R. Bush, C. H. Coffin, Milton Dargan, R. N. Hughs, D. B. Harris, C. J. Holman, John H. Kelly, Joseph McCord, W. R. Prescott, H. E. Rees, Harry A. Smith, Edwin G. Seibels. Arbitration committee, Edward Milligan, chairman; R. M. Bissell, J. H. Brewster, C. L. Case, L. W. Crockett, A. W. Damon, George W. Dewey, J. J. Guile, H. W. Eaton, J. Montgomery Hare, E. C. Irvin, Joseph A. Kelsey, A. G. McIlvaine, John H. Stoddard and G. W. Babb.

A group insurance policy issued by the Connecticut General on the public school teachers of Syracuse, N. Y., which includes also those nurses who are engaged by the Board of Education in public school work, provides for the payment of $250 for death from any cause and $10 for disability from injury or sickness for twenty consecutive weeks, exclusive of the first two weeks of confinement. A rate of $10 per year is charged teachers between the ages of eighteen and fifty, and fifty-one to sixty, $12.60. Those between the ages of sixty-one and sixty-five are rated at $17. The premiums are payable annually. No medical examination is required.

The Connecticut Association of Life Underwriters has endorsed the campaign of the National Association of Life Unoerwriters for a war on the taxation of life insurance. Action will be taken to obtain more favorable tax laws for life insurance in Connecticut where the stock companies pay a one per cent tax on the market value of the stock while the mutual companies pay a tax of one-fourth of one per cent of the value of their assets, less statutory deductions.

The following have been appointed members of the health conservation committee of the World's Insurance Congress: E. E. Rittenhouse, chairman; Irving Fisher, professor of political economy, Yale University; Dr. Lee K. Frankel, head of nursing system, Metropolitan Life; Dr. Toulmin, medical director, Penn Mutual, and Dr. Theodore Cutting, medical examiner, Pacific Coast Casualty.

Conspiracy to defraud by use of the United States mails is the charge which will be prosecuted against the four Delaware mutuals, the Mercantile Fire and Marine, Home Fire and American Fire, all of Dover, and the Equitable Fire of Wilmington. United States District Attorney John P. Nields, of the Federal District Court at Wilmington, has the cases in hand.

Alleging that Rudolph Girouard, of Manville, R. I., was induced to become a bankrupt by the New England Casualty in order that the company could escape liability under an automobile accident policy, James A. Williams, trustee in bankruptcy for Girouard, has brought suit against the company for $5,000 indemnity under the policy carried by Girouard.

The regular triennial examination of the Home Life has been made by the New York Insurance Department, and the report shows admitted assets, December 31, of $29,181,999, and a net surplus of $1,979,941. The policyholders' surplus amounted to $2,104,941. The insurance in force has increased from $92,532,533 in 1909 to over $116,000,000 in 1913.

During June 966 cases under the Wisconsin Workmen's Compensation Law were adjusted and paid in full. The indemnity in these cases amounted to $71,756.91, or an average of $74.28 per case. In addition to indemnity, approximately $35.878 was paid for medical and hospital bills.

Joseph A. Sinn, for many years vice-president of the City Trust, Safe Deposit Surety Company of Philadelphia, and vice-president and manager of the Title Guaranty and Surety Company of Scanton, has been put in charge of the reinsurance department of the National Surety Company.

Iowa's "Blue Sky" law has been declared unconstitutional in the United States District Court on the grounds that it offends against the commerce clause of the Federal Constitution and that it grants privileges and immunities to citizens of Iowa denied citizens of other States.

The report of the Illinois Fire Marshal for June shows a fire loss for the month of $957,014 in 975 fires. Of these 285 were in Chicago, with a loss of $122,505, and 690 were outside, with a loss of $834,509. The damage to buildings was $545,669 and to their contents $411,345.

After several attempts the Ginners Mutual Fire of Houston has secured the approval of the Insurance Commissioner of Texas to its charter and by-laws. Until these were corrected the approval was withheld. A. E. Jones is president and L. A. Kurff is secretary.

In Alabama the Court of Appeals has upheld the State law which provides that all insurance premiums must be taxed regardless of whether the premiums are paid to local agents or sent direct to home offices of companies domiciled in other States.

To the end of securing greater co-operation among their members through a single organization as well as decreasing operating expenses, the Minnesota and North Dakota Fire Underwriters and the Minnesota State Fire Prevention Association have combined.

The delegates to the annual national convention of the United Norwegian Lutheran Church at St. Paul named a committee to investigate the advisability of organizing an insurance company for the benefit of the congregation and members of the church body.

One of the largest public official bonds written in New York State for some time was that for $100,000 written by the American Surety through its branch office at Syracuse on the State Treasurer, covering the State Workmen's Compensation Fund.

A veteran's Policyholders' League, comprising Metropolitan policyholders of twenty-five years' standing is being organized to celebrate the seventieth birthday of President Hegeman and his completion of forty-four years in the Metropolitan's service.

The American Life Convention will hold its ninth annual meeting at Dallas, Texas, October 8-10. The convention is now composed of 104 companies, representing thirty-two States and having more than $1,800,000,000 insurance in force.

The Mid-West Casualty Company is being organized at Peoria, Ill., to take over the business of the Illinois Benefit Association, which has been doing business about seven years and has a premium income of about $80,000 per annum.

A bill has been introduced in the Louisiana House requiring all fire insurance companies doing business in that State to furnish the Secretary of State with a detailed classified statement of premiums received and losses paid.

The New South Life Insurance Company has filed its charter with the department at Shreveport, La. Proposed capital $750,000 and $250,000 surplus. Charles A. Robertson is president. All the officers reside in Poplar Bluff, Mo.

In connection with the annual meeting of the National Association of Local Fire Insurance Agents at Minneapolis next month, a meeting of agents of the American Union Fire of Philadelphia will be held.

E. G. Halle, manager of the Germania Fire Company of Chicago, has been delegated a special commissioner to interest European insurance men in the World's Insurance Congress at San Francisco.

The Western Automobile Conference has appointed the following special committee on rates: Clare Osborn, chairman; John Gallagher, Fred J. Sauter, J. J. Powers and A. T. Graham.

After operating as a mutual since its organization in 1893, the Bankers Accident, of Des Moines, Ia., has become a stock company with $100,000 capital and $20,000 net surplus.

The Toledo Travelers Life Insurance Company has been organized at Toledo with a capital of $100,000 to take over the business of the Toledo Traveling Men's Association.

The Minnesota Supreme Court has sustained the constitutionality of the Workmen's Compensation Law enacted by the 1913 Legislature and effective October 1, 1913.

At the sixth annual conference of the Insurance Institute of America it was decided to hold their 1915 meeting in San Francisco at some time during the Exposition.

An effort is being made to organize the Federal Casualty and Surety Company at Washington, D. C., with a capital of $1,000,000 and a surplus of $500,000.

The city council of Pittsburgh has passed an ordinance creating a division of fire prevention, with a division chief at a salary of $2,400 a year.

An attempt will be made to amend the Robertson Investment law at the next session of the Texas Legislature.

The Standard Fire of Hartford has increased its capital to $1,000,000.

REVIEW OF THE FINANCIAL SITUATION

NOTHING resembling the process of laying anew or strengthening the foundations of financial and business confidence can be seen in any of the principal events of the past week. On the contrary, it cannot be doubted that confidence has been further weakened by the revelation of political attitudes and by the disclosures, assuming scandalous proportions, of the conditions under which much corporate organization has been effected and conducted in recent years. With the threat of further receiverships for more large railroad systems, with more industrial enterprises confessing insolvency or accused of it, with so much encouragement supplied to a persistence of political radicalism instead of a reaction toward conservatism, the wonder is that trade volumes should be holding up at all and that values are not swept away in one overwhelming debacle and that anything in the nature of confidence in the future of values abides. Nor does Europe make any contribution of optimistic import, for affairs abroad exhibit a disappointing slackness and nervousness because of political and financial factors that are doubtful if not worse. The only conclusion to be drawn is that underlying all the economic turmoil of the times there is a large amount of fundamental soundness, and that the disturbing agitation which is witnessed is very largely superficial.

Something like omniscience would be required to tell whether or not what is going on in Wall Street, for example, marks the beginning of a new period of economic disintegration with an era of reintegration and recovery too far off to be described, or whether it is the culmination of a cycle of readjustment. For our own part we incline very much to the belief that we are regarding now the wreckage left by storms that have passed and not the tokens of coming hurricanes. For fully a half decade the world has been traveling down the hill of adversity into the valley of economic depression, and the chances are that the road ahead lies uphill however painful and troublesome the ascent. If that is the case we are now settling with the past in order to make a fresh start for the further journey. Is anything else more impressively signalized by the uncovering of corporate mismanagement, of financial extravagance and wickedness in the abuse of corporate power and opportunity? Is anything else denoted by the failure of politics to realize that the work of destruction is done and that nothing beneficial can be accomplished by the mere direction of abusive attention to the faults and follies that reared structures of value which could not stand when the winds of hard times began to blow?

Still it is not surprising that the revival of confidence is not even in its incipient form discernible when such a terrific document as the Interstate Commerce Commission's report on the history of the New York, New Haven & Hartford Railroad under the Mellen management furnishes a commentary of wide applicability to the financial era that is closed. As summarized by the Interstate Commerce Commission the Mellen-Morgan-Rockefeller conduct of New Haven affairs displays the following characteristics:

"Marked features and significant incidents in the loose, extravagant and improvident administration of the finances of the New Haven, as shown in this investigation, are the Boston & Maine despoilment; the inequity of the Westchester acquisition; the double price paid for the Rhode Island trolleys; the recklessness in the purchase of Connecticut and Massachusetts trolleys at prices exhorbitantly in excess of their market value; the unwarranted expenditure of large amounts in educating public opinion; the disposition, without knowledge of the directors of hundreds of thousands of dollars for influencing public sentiment; the practice of financial legerdemain in issuing large blocks of New Haven stocks for notes of the New England Navigation Company, and manipulating these securities back and forth; fictitious sales of New Haven stock to friendly parties with the design of boosting the stock and unloading on the public at the higher market price."

There is not much comfort to be extracted from the New Haven report by those who would seek to attribute to politics a major share of responsibility for the reversal which has overtaken American economic fortunes. Making all due allowance for the blatant viciousness of the political animosity which masquerades in the findings sanctioned by the Interstate Commerce Commission, for the ill-concealed purpose to capitalize to political advantage the whole hideous blunder of the corporate tragedy that the New Haven railroad has become, the report will still remain a blistering official indictment of men and ideas altogether too controlling in our financial and corporate activities since the opening of the twentieth century. Coming at the time it does the report could not fail to intensify the dejection of sentiment already resulting from the more or less scandalous aspects of the troubles of the St. Louis & San Francisco railroad, the Rock Island property, the Wabash and the Wabash Pittsburgh Terminal companies, and the Missouri Pacific, the Denver & Rio Grande and other railroad systems.

There is no need to extend the catalogue of distressed railroads which includes some whose hardships are represented chiefly by the payment of dividends in excess of the amount warranted by earnings, nor by referring to the numerous industrial corporations in the background of difficulty. The facts are in regard to these and other things that we are beginning to see now how much of our boasted prosperity in past years was owing to the inflation of business and financial bubbles, and that we are beginning to see this clearly is a circumstance of most hopeful augury. The great danger now is that for too long a time mere vengefulness will dominate political councils and that the processes of economic rehabilitation, which left to themselves would be conducted with a sane respect for the lessons that have been learned, will be interfered with by political clamor for punishments and for punitive measures which will place obstacles in the way of legitimate ambitions to resume the forward march of enterprise. So far as concerns the corporate collapses that have taken place or may be impending, it suffices to say that they are the necessary clearing away of debris to make room for renewed efforts at the material development and expansion indispensable to the accommodation of a growing population.

What is incumbent on politics to recognize now is that men are the creatures of the times which they help in turn to create, and that when so many men make so many grave mistakes as in the last ten years, the fault must have been less theirs than the fault of the whole people to whose average of intelligence and morality they were certainly not inferior. If we are going to go ahead at all we cannot afford to contemplate the past so much in the light

of the justification which it may supply for punishing men who committed its great mistakes, as for the instruction which may be derived from it for the establishment of an era of sounder progress than we have ever known.

There is not much to chose between the standards of ethics which permitted the corporate abuses which now engage so much inflated public notice and the motives which inspire self seeking politicians to raise themselves to official place in power or maintain themselves therein by exploitation and denunciation of corporate crimes and misdemeanors. There is altogether too much reason to believe that our politicians to-day do not see as clearly the needs of the times as does the financial and business community which has learned so bitter a lesson from harsh experience.

Crops continue to offer support against the depressing factors, but it is not as yet obvious that good crops can do more than prevent depression from becoming disaster. Such betterment of business as has been reported lately has been only of the kind that ministers to ordinary consumptive requirements and embraces nothing in the nature of new enterprise for which the prime requisite is a state of confidence that is now absolutely non-existent. The money market is distinctly harder although outwardly the banking position is one of so much comfort as to provoke curiosity regarding Secretary McAdoo's conceptions of Treasury policies as illustrated by his invitation to the banks to ask for deposits of public funds to assist in the movement of the crops. The prompt compliance of the banks of the interior in asking for such deposits is less curious because, as was proved a year ago, they always have plenty of paper assets which they are glad temporarily to liquify through the means of temporary Government purchases of the paper that they have discounted.

The conditions into which the commercial paper market has fallen since the Claflin failure have also undoubtedly accelerated the normal disposition of the country bankers to get their hands on some Government money. The facts that are coming out about the Claflin failure have made the disorganization of the general commercial paper market complete, and it must be said that the manner in which the Claflin paper was manufactured fits in very well with the past scheme of things in the business world as betokened by the evidences of corporate weakness cropping out in other quarters.

COTTON

July 18, 1914.

COTTON has had in the main an idle week, and the volume of business both in the spot and in the futures markets has been of very small proportions. Net changes in prices have also been insignificant, and the end of the present week found contracts in New York selling at almost exactly the figures of the close of the week before. In the course of the week there had been a rise of about $1 per bale above the closing prices of Friday of last week, and this rise had been followed by a decline of about $1.75 per bale from the high point, but the resultant of all the forces at work was no price change at all for the week. The truth is that for different reasons there is virtually no business passing between cotton merchants and spinners, either in the United States or in Europe. The trouble in England and the countries of Continental Europe is the very great depression of the cotton industry there, the continued discussion of the advisability of going on short time, and the unremunerative prices offered for yarns and cloths for the coming season's deliveries. Sir Charles W. Macara, President of the International Federation of Spinners, is continually predicting dire consequences in Lancashire and elsewhere, unless the policy of short time is resolutely and promptly adopted. Yesterday, at a meeting of the Committee of the Federation held in Manchester, it was resolved to take a ballot of the members in all European countries, in the hope that the necessary 80 per cent of these may vote in favor of a shut-down of 150 hours, distributed over the coming three months. It will require some two weeks to take this ballot, and it is entirely possible that the necessary percentage of assenting votes may not be obtained. Nevertheless the urgency with which the proposal is pressed is certainly indicative of no very prosperous state of business, even though something must be allowed for the desire of spinners abroad to begin laying in their season's stocks of cotton at lower prices than now prevail. In the United States the difficulty is of a different character and may be called primarily political. American cotton manufacturers are not as a rule able to dispose of their goods on a basis profitable to their mills, yet the demand is excellent in volume and requires the use of a large amount of cotton monthly. This is shown by the Census Bureau's statement of the consumption in June, issued on Tuesday of this week (page 89), from which it appeared that despite the business uncertainty found everywhere, the American mills had to spin up during June, 445,635 bales of cotton, as compared with 441,157 bales in June last year. Again, mill stocks of cotton in this country are already some 50,000 bales smaller than at this time a year ago, and barely sufficient to take the mills through to the time when they can get new cotton; and they are growing relatively less with every passing week. The supply of cotton at American ports and interior towns is now composed to an almost unprecedented degree of very low-grade and undesirable cottons, which the spinners are unwilling to buy except under absolute necessity. The time has accordingly arrived when many spinners feel that some provision must be made for the needs of the first months at least of the new season. But they find themselves unable to make this provision, owing to the complete uncertainty in the minds of responsible cotton merchants, with regard to the effect upon the relative values of future contracts bought as "hedges" on the cotton exchanges, which will result from the enactment into law of the legislation about cotton exchanges now making its slow way through Congress. These merchants have been accustomed in the past to have on their books, by the middle of July, commitments to spinners to the amount of hundreds of thousands and often millions of bales of cotton, to be delivered all the way through from September to May. This year they have virtually no such commitments open, and with rare exceptions they decline flatly to make them saying that the risk is too great to be conservatively undertaken. This situation is, of course, highly uncomfortable for the spinners who are far from certain that the coming crop will be of sufficient size to meet the world's requirements, and who fear to make contracts ahead for their goods, without the protection of having the cotton for these goods contracted for at present prices, and not left to be bought at possibly very much higher prices when the crop begins to move. Naturally, moreover, the result of this deadlock is extreme contraction in the volume of business on the cotton exchanges, where hedge contracts are dealt in. Until the final form of the regulatory legislation is known, this state of things can hardly change, though it is obvious that a large amount of business is accumulating which will be put through as soon as this is possible. With regard to the condition of the growing crop, the prevalent belief is that it has very greatly improved during the past three weeks. It is granted that Texas, Oklahoma and parts of Arkansas and Tennessee now badly need rain; but stress is laid upon the excellent showers in the States East of the Mississippi River during the past ten days. Hence it was rather a shock to the trade yesterday when Miss Kate M. Giles issued her interim report on the condition of the crop as of July 10. The report indicated, not considerable average improvement, but a slight decline in condition for the period from June 25 to July 10. The actual figure was 78.8 per cent of normal on July 10, as compared with 79 per cent on June 25, 75.2 per cent on June 10, and 83.4 per cent on July 10, 1913 (all the figures being Miss Giles' own). This report was disquieting, to say the least; but it was passed off as having little present value, because of the more favorable weather in the Atlantic States since July 10.

THE CONTRACT MARKETS

THE NEW YORK COTTON EXCHANGE.

The MOVEMENT OF THE AMERICAN CROP.

The following tables, derived from the New York Cotton Exchange, show the movement of the American cotton crop for the past week and since September 1, 1913, with comparisons for previous years:

CROP MOVEMENT INTO SIGHT.

Weekly Movement.	1910-11.	1911-12.	1912-13.	1913-14.
Port receipts	4,890	11,670	21,313	20,618
Overland to mills and Canada	3,252	6,367	7,023	2,539
So. mill takings, est., exclusive of takings from Southern ports.	15,000	20,000	25,000	10,000
Loss of stocks at interior towns	5,937	15,126	17,688	13,626
Brought into sight for week	17,205	22,911	35,648	19,531
Total Movement—				
Port receipts	8,525,799	11,856,630	9,808,255	20,377,781
Overland to mills and Canada	958,956	1,258,423	1,079,306	1,144,076
Southern mill takings..	2,180,000	2,650,000	2,735,000	2,840,000
Stocks at interior towns in excess of Sept. 1..	46,954	19,874	74,075	23,318
Brought into sight thus far this season	11,711,709	15,784,927	13,696,636	14,385,175

The total crop movement is respectively for 324 days, 323 days, 321 days and 320 days.

CENSUS BUREAU REPORT ON CONSUMPTION AND DISTRIBUTION OF COTTON IN JUNE

On Tuesday, July 14, the United States Census Bureau issued its monthly report (the tenth of the season of 1913-1914) on the consumption, distribution and supply of cotton in the United States for June, 1914. The figures, with comparisons for June, 1913, are given in the following tables,—round bales being counted as half bales and bales imported from foreign countries being reduced to equivalent 500-pound bales (net weight):

CONSUMPTION AND ACTIVE SPINDLES IN JUNE.

	Consumption		Active Spindles	
	1913. Bales.	1914. Bales.	1913, No.	1914, No.
In mills in the Cotton States	235,721	235,511	11,954,524	12,350,070
In mills in all other States	205,436	210,124	18,091,597	18,588,682
Totals for United States	441,157	*445,635	30,046,121	30,938,752

*Includes 16,805 bales of foreign cotton.

STOCKS OF COTTON AT MILLS AND IN WAREHOUSES ON JUNE 30.

	In Manufacturers' Establishments		In Independent Warehouses	
	1913. Bales.	1914. Bales.	1913. Bales.	1914. Bales.
In the Cotton States	471,767	465,115	498,742	436,336
In all other States	731,703	689,292	110,618	194,393
Totals for United States	1,203,470	†1,154,407	609,360	‡630,729

†Includes 66,378 bales of foreign cotton.
‡Includes 9,940 bales of foreign cotton.

IMPORTS AND EXPORTS OF COTTON IN JUNE.

Imports from	1913. Bales.	1914. Bales.	Exports to	1913. Bales.	1914. Bales.
Egypt	6,622	11,938	United Kingdom	88,906	121,687
Peru	572	1,010	Germany	60,804	80,633
China	617	2,122	France	7,935	11,423
All other countries	208	31,940	Italy	27,077	30,349
			All other countries	39,199	51,441
Total imports	8,019	47,010	Total exports	223,921	*295,539

*Includes 23,409 bales of linters.

In addition to cotton proper there were consumed in the United States, during June, 26,945 bales of linters (25,355 bales in June, 1913). Stocks of linters on June 30 were 88,819 bales at manufacturers' establishments (81,845 bales in June, 1913), and 33,185 bales in independent warehouses (40,877 bales in June, 1913). The consumption of linters for the ten months ended June 30, 1914, was 258,155 bales (251,629 bales for same period in 1913). Exports of linters for ten months were 249,966 bales.

The consumption of cotton proper (including foreign cotton) in the United States for the ten months ended June 30, 1914, was 4,745,390 bales, compared with 4,588,729 bales for the same period in 1913.

* * *

German Textile Companies' Dividends.—From figures gathered by the "Elsassisches Textil-Blatt" from the recent financial reports of 173 German stock companies engaged in various branches of the textile industries it appears that twenty-five in the cotton spinning industry with a total capital of $9,299,000 paid only 9.4 per cent, as compared with 9.6 per cent for 1912-1913. In cotton weaving, a reduction of .2 per cent is recorded. In cotton spinning

and weaving, the companies paid 7.2 for 1913-1914 and 8.0 the previous year. The drop in worsted spinning companies' dividends is from 9.1 per cent to 6.9 per cent, in woolen manufacturing from 9.4 per cent to 9.3 per cent, in silk weaving from 9.2 per cent to 6.1 per cent. In the linen and jute spinning branch, due to good business in the latter, an advance was made from 9.2 to 11.5 per cent.

* * *

Japanese Cotton Goods in Manchuria.—Mr. Edwin L. Neville, United States Consul at Dalny, writes that the only noteworthy feature of the Chinese customs returns for the quarter ended March 31, 1914, showing imports of merchandise via Dairen (Dalny) is the steady increase in receipts of Japanese cotton goods. This increase has been sufficient, in spite of the one-third reduction in duty allowed on goods brought by rail through Chosen, to double the revenue received by the customs. With the new decrease in freight rates allowed by the South Manchuria Railway on goods entering Manchuria by rail via Antung, it is expected that the increase in imports will be even greater.

Comparative statistics of imports of certain lines of cotton goods during the first three months of 1913 and 1914 follow:

Articles.	1913.	1914.
Shirtings, gray.	Pieces.	Pieces.
American	.....	480

Chilian Mineral Production.—Figures just published show that Chile produced minerals during 1912 valued at $136,021,902, of which nitrate of soda supplied $108,405,000; copper, $12,410,000; coal, $[illegible]; borax, $2,194,000, and the balance scattered between thirteen other minerals. There were 21,217 mining claims in force in Chile in 1912, from which the Government received $195,[illegible] in dues. According to the best information obtainable, the mineral production for this country during 1913 was fully 10 per cent more than that of 1912, with a bright outlook for 1914.

Atlantic Mutual Insurance Company

ATLANTIC BUILDING

51 Wall Street, New York

INSURES AGAINST MARINE AND INLAND TRANSPORTATION RISK AND WILL ISSUE POLICIES MAKING LOSS PAYABLE IN EUROPE AND ORIENTAL COUNTRIES.

Chartered by the State of New York In 1842, was preceded by a Stock Company of a similar name. The latter Company was liquidated and part of its Capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the Company has Insured property to the value of	$27,219,045,826.00	
Received Premiums thereon to the extent of		$282,298,429.80
Paid Losses during that period	$141,567,550.30	
Issued Certificates of Profits to dealers	$89,740,400.00	
Of which there have been redeemed	$82,497,340.00	
Leaving outstanding at present time	$7,243,060.00	
Interest paid on Certificates amounts to	$22,585,640.25	
On December 31, 1913, the Assets of the Company amounted to		$13,259,024.16

The profits of the Company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed. in accordance with the charter.

A. A. RAVEN, President
CORNELIUS ELDERT, Vice-President
G. STANTON FLOYD-JONES, Secretary

Things and actions are what they are, and the consequences of them will be what they will be; why then should we desire to be deceived?—Bishop Butler's Sermons at the Rolls.

IT will, of course, be the general impression that the Government will have an easy time of it in its suit against the New York, New Haven and Hartford Railroad, under the Sherman Anti-Trust Act, decided upon by President Wilson and Attorney General McReynolds this week. We are ourselves not so sure of it. The courts are places very different from the halls of Congress, and the law is something very different from the rough and ready conclusions and the unrestrained opinions of the members of the Interstate Commerce Commission. The public mind is now filled with notions of the utter lawlessness of everybody connected with the New Haven Railroad; prima facie evidence of many inexcusable doings of some at least who were in control of the railroad's affairs, has certainly been produced; and it is easy to assume that all was of one piece, all unregardful of the plain dictates of the law, and all infected with some taint of criminality. The new management of the road has itself seemed to lend color to this interpretation of the situation, through it manifest desire to arrive at a composition with the Government, without going to court, even though the composition might involve yielding real rights. The effect of all this upon the minds of the majority of persons has undoubtedly been to breed the conviction that the directors and executive officers have come to realize that there was an element of guilty purpose in all their important actions of the past decade or so; and that they have now arrived at the conclusion that it is best for them to conform to the law, as asserted in any and all demands of the officers of the law upon them. On the whole, they have had little sympathy this week in the stand they have made against accepting the utterly unlawful, though legally adopted, imposition upon them by the Massachusetts Legislature of an unexpected and indefensible requirement with regard to the stock of the Boston and Maine, of which they were preparing to divest the New Haven. To most this refusal to accept an unwarrantable burden and a derogation of the rights of the stockholders of the New Haven has appeared pure quibbling, seeing that the matter was small, in comparison with the great whole. This has been the view of President Wilson, and the mass of the public has agreed with him. The general thought has been that persons patently guilty of many crimes and misdemeanors should not stand upon small and pettifogging points, but should yield and accept whatever is meted out to them, even though there be some element of injustice in a part of it. The Directors of the New Haven, however, have decided that they are entitled to justice, even in a lesser matter, and that their duty to the stockholders whom they represent compels them to stand out for this justice. Hence the entire subject is to be brought into court, where the law as it is, rather than as it is popularly supposed to be, will determine in how far each particular operation of the New Haven's managers in the past twenty years has been in violation of the Sherman Anti-Trust Act. The question before the courts will be in every case, not whether the transaction was improvident and ill-advised, but whether in and for itself or in conjunction with other transactions it was a violation of the Sherman Law. It cannot be set up by the Government, for instance, that inasmuch as an extravagant price was paid for the Rhode Island trolley lines, therefore the managers of the New Haven were guilty of monopoly and restraint of trade.

We are not favorably impressed by such portions of the complaint of the Government in this case as have been published in the newspapers. It may, of course, be that the complaint as a whole is stronger than any of its parts, and that its cumulative effect, when taken in its entirety, is more impressive than is the effect of quotations from it. This does not often happen with documents of this character, but it cannot be denied that it may have happened in this particular case. Still, the best we can do, without having the whole complaint before us, is to assume that the parts published by the press are fairly representative of the whole. And these parts, as we read them, are neither strong and convincing in themselves, nor indicative of unhesitating conviction on the part of the persons who drew the complaint or directed the drawing of it. Having no interest in the matter save that of the citizen and the publicist, we should say that the Department of Justice felt itself to be treading on very thin ice in more than one portion of its attempt to define precisely what the New Haven has done, which is in contravention of the Sherman Anti-Trust Act.

The complaint is drawn wholly under the Sherman Anti-Trust Act, and its allegations are, in brief, that the New Haven Railroad, other railroads in New England and New York allied with it, various holding companies and certain trust companies, as well as some twenty-nine individuals

(directors of the New Haven), conspired to obtain and did obtain a monopoly of the transportation facilities of the greater part of New England, and that they conspired to bring about and did bring about and are maintaining a restraint of the interstate trade and commerce of the larger part of New England. The enormity of the offense charged is illustrated by the allegation that, beginning with an unlawful agreement made in 1893 between the New Haven and the Boston and Maine as to a division between them of the traffic territory of New England, the New Haven unremittingly pursued the policy of adding to its system, first, the other railroad systems of New England, and, second, virtually all of the trolley lines in the territory covered by its lines. As a result of this policy, by June 30, 1910, the New Haven had acquired control of 6,541 miles, out of 8,233 miles in all, of the main railroad lines in New England; and its annual earnings from passenger and freight traffic were $121,069,411, out of a total for all of New England of $130,389,195. Only 411 miles of main line in all New England remained in actual competition with the New Haven. Furthermore, the New Haven had obtained control of twenty-two of the coastwise steamship lines of New England and only six independent lines remained in competition with the New Haven. In addition to all this, the New Haven had set about obtaining control of all the trolley lines in Southern New England, and acquired about 1,500 miles of such lines, west of Providence and south of the Boston and Albany Railroad, out of a total of 1,625 miles. The New Haven's rail lines earn about 91 per cent of the gross freight revenue and about 95 per cent of the gross passenger revenue of all the steam railroads in New England; its trolley lines have about 91 per cent of the trolley traffic of the territory in which they are situated.

On the face of it, this is monopoly with a vengeance, and it might be assumed that restraint of interstate trade and commerce would result in a thousand forms. Curiously enough, however, when an attempt is made in the complaint to enumerate the specific consequences of the described state of things, whether in the way of the exercise of the power of monopoly or in the way of actual restraints upon trade and commerce, almost pitiful weakness is disclosed. Here is the portion of the complaint to which we had particular reference, when we said that we were not favorably impressed with the complaint, as setting forth a strong and undeniable cause of action. For the specified manifestations of monopoly and restraint of trade are the following: Unreasonable delay in delivering freight; the use of inferior and unsafe rolling stock; the lack of proper signal systems and safety devices; the destruction of the autonomy in rate making of the units now combined; the suppression of competition among these units; the diversion of freight traffic to the New Haven Company; an effort to increase freight rates; and arbitrary methods in dealing with patrons.

We have not the slightest desire to express approval of the general programme of development and consolidation under unified control of the railways and trolleys of New England, which has obviously been the policy of the managers of the New Haven. As we said editorially last week, we believe that this programme, borne as we think in the mind of the late J. P. Morgan and intended by him for the welfare of New England, was yet fore-doomed to failure. The project was a business mistake, because it was bound to encounter obstacles in the feeling and opinion of the community which would make its success impossible. By some means the great whole, even if initially created, was certain in no long time to be torn to pieces. But facts are facts and justice is justice, no matter how mistaken the leaders of affairs may be in their thinking or how angry the public and the politicians may become when the mistakes yield their inevitable results. A mistake is not a misdemeanor, nor is miscalculation a crime. The present question, to be fought out in the courts, is whether the directing spirits of the New Haven have conspired to produce and have produced a monopoly; and whether the results of that monopoly are restraints of trade. Looking at the matter from this angle, we are forced to say that we have never seen a more pitiful list of things characteristic of monopoly or of restraints of trade resulting from monopoly than is the list which we have just given from the complaint lodged by the Department of Justice against the parties defendant in this New Haven case.

To us it is a thoroughly reasonable supposition, in view of the complaint as now drawn, that the Department of Justice has been embarrassed in the most serious way, in dealing with the New Haven question, by the definition of "monopoly." This word will be construed by the courts in its common law sense, not in the sense of its vague popular use. And the common law sense of "monopoly" is not the mere ownership and management of property, but the ownership of virtually the entire supply of a given kind of property, *accompanied by the unrestrained power to do what one will with it.* He who obtains the ownership of virtually the entire supply of cotton in the country and then proceeds to exact from those who must buy it such price as he sees fit is guilty of monopoly, in the common law sense. But if there were in existence a Governmental power authorized to fix the price and regulate the distribution of the cotton, there could be no monopoly, in a common law sense, even though a person or group of persons bought up every bale of cotton in the land.

This is the difficulty which the prosecutors of the New Haven Railroad are, in our opinion, encountering, though as yet they are saying nothing about it. The steady enlargement of the power of the Interstate Commerce Commission, through decisions of the Supreme Court upholding the plenary character of the authority of Congress and of the administrative instruments of this authority, with regard to the fixing of rates of interstate transportation, the conditions of service for interstate carriers, the minutest details of the management of these carriers, has now brought matters to a point where there virtually can be no monopoly, in the common law sense, on the part of a railroad or group of railroads. It may be said that the recent Intermountain Rate decision, declaring the power of the Interstate Commerce Commission to fix the prices of transportation, dealt a *coup de grace* to the doctrine that it is within the range of possibility for a railroad system to possess a monopoly. The essence of monopoly,—i. e. the power to fix prices for a controlled commodity at will,—is now destroyed, in so far as the railroads of the United States are concerned.

It will be asserted, of course, that the Northern Securities Case and the more recent Union Pacific Case stand in direct opposition to this contention. In both these cases the Supreme Court decisively held that the common ownership of naturally competing railroad lines was a combination in restraint of trade. But the Supreme Court is not a legis-

lative body, laying out a consistent plan of future policy. It is not bound by its own decisions until it makes them; and the logic of a new construction of a power of the Federal Government does not become compulsive, until an actual case has arisen and the Supreme Court has ascertained and stated the logic that must govern the decision of it. When the Northern Securities Case and the Union Pacific Case were decided, it was not yet the law that the Interstate Commerce Commission has plenary authority over the prices which interstate carriers may charge for transportation. That principle became a part of the law only with the Intermountain Rate decision. Henceforth, it will be a refuge, as well as a rule of regulation, for the managers of our railroads.

In the light of this, it may be seen how trivial are the allegations of evidences of monopoly and restraint of trade contained in the complaint against the New Haven. There is not one matter among those enumerated over which the Interstate Commerce Commission has not now full control. If there is monopoly and restraint of trade in the New Haven to-day, the fault is that of the Interstate Commerce Commision, and not that of the owners and managers of the road. It can compel the unreasonable delay in the delivery of freight to be stopped; it can force the replacement of inferior and unsafe rolling stock, and the installation of proper signal systems and safety devices; it can compel freight to be properly routed; it can even order the arbitrary methods in dealing with patrons to cease. As for the "destruction of the autonomy in rate making of the units now combined," these units, in the light of the Intermountain Rate decision, possess no autonomy to be destroyed. They have not a vestige of power to make rates, and such rates as they do make are mere suggestions to the Interstate Commerce Commission, the ultimate authority, which may permit them or refuse them, as it sees fit. Nor can there be, as things now are, any such thing as the "suppression of competition among the units"; these units possess no ultimate power of action; they are cut off from competition in a legal sense by the ever-present authority of the Interstate Commerce Commission to pass upon and modify all their acts. Finally, it is a contention of a completely trivial character to allege that "an effort to increase freight rates" on the part of any railroad or combination of railroads is indicative of either monopoly or restraint of trade. No one can be held guilty of a crime which he is powerless to commit.

These are the considerations that lead us to believe that the way of the Department of Justice in dealing with the New Haven situation may prove to be far less smooth than is generally expected.

Arthur Richmond Marsh

Reasons for the Prevailing High Price of American Cotton

By John A. Todd*

Professor of Economics, University College, Nottingham, England

THE most important question in the cotton trade at the present moment is that of the increase of supply. Rapid as the development of the world's crops has been within recent years, it has not kept pace with the increase of consumption, which even the marked rise of prices has not been sufficient to check. We frequently hear it said just now that the trade requires a 15,000,000-bale American crop this season if serious scarcity is to be avoided. It is certainly remarkable, when we recall the history of even the last five years, that such a crop should now be spoken of as almost a matter of course, a thing which has only to be demanded in order to be supplied; for it is only five years since our last ten million bale crop, which was followed by one of twelve. A ten million bale crop now would be an unthinkable disaster.

All this points to the existence of an idea in the minds of the cotton trade that the American cotton crop can be increased to order, and that it will go on increasing in the future if and when we require it. That such a continued increase will be required for at least the next few years is generally accepted. It seems worth while, therefore, at this stage to consider the possibilities of the American cotton crop for further extension.

As far as the area available for cotton growing is concerned the facts are certainly reassuring. The area of the cotton belt is enormous—about 700,000 square miles, as against the total area of the United Kingdom, 121,400 square miles. Of this area considerably less than one-tenth part is under cotton, the figures being, in 1913, 35,622,000 acres, or only a little over 55,000 square miles.† While, of course, a large part of the total area never will be suitable for cotton growing, it is perfectly certain that the present figure is very far short of the limit of possible development. As far as the mere supply of land is concerned, the American crop could be doubled in a year. Texas alone could grow a crop as large as the present total.

That being so, it may be asked why the area under cultivation does not increase more rapidly than it does. The average rate of increase for the last ten years has only been about 2½ per cent per annum, yet it is generally believed in Lancashire that at present prices cotton ought to be an exceedingly profitable crop. The explanation is to be found in the existence of several limiting factors which are seriously retarding the extension of the crop.

The first is boll weevil. Found in Mexico in 1862, it made its appearance in Texas in 1894, and since then it has steadily spread over the cotton belt until in 1912, 278,000 square miles out of the total of 700,000 were infected. In the South many districts along the Gulf coast line have been entirely denuded of cotton; there is now hardly a cotton field within a day's ride of New Orleans, which used to be surrounded by cotton. In the Central States it practically wiped out the long-staple crop, and it is now gradually eating its way into the Eastern States, which have hitherto been

*Professor Todd is perhaps the best-known economic student of cotton and everything connected with cotton, in England. He has been entrusted with important missions to study the possibility of increasing the supply of cotton, both of the "bread and butter" and of the long staple varieties. His work in Egypt, in connection with the extension of cotton culture in that country, is well known. He has also within the past two years made an exhaustive study in the United States of the causes of the diminishing supply of American long staple cottons and of the increasing irregularity and loss of staple length of American cotton as a whole. The present article is reprinted from the July issue of "Worrall's Monthly Textile Gazette," Oldham, Eng.

†[The United States Department of Agriculture corrected this estimate to 37,458,000 acres, or 58,500 square miles.—Editor.]

ommon and where it threatens the Sea Island crop with a similar fate. There is no real hope yet of any cure. Many things can be done to mitigate its damage, such as picking up and burning the affected squares. The clearing out of its Winter quarters may reduce its numbers, for it hibernates in the dead stalks of various plants wherever there is wooded country or undergrowth, and only a very severe frost will kill it under these conditions. Its depredations may be evaded by cultivating early-maturing varieties which will ripen a fair proportion of their crop before the weevil appears in large numbers in August and September. There is always a possibility of discovering a really efficient parasite, which would keep it under control, if not entirely extirpate it; but in the meantime the boll weevil must be accepted as a very serious factor, especially in keeping down the average yield per acre, which over the whole belt is only about 200 pounds, as compared with the Egyptian average of over 150 pounds.

But the main reason why the boll weevil is not more efficiently tackled is just the one thing that is in itself a more serious hindrance to the development of the cotton crop, namely, the lack of labor, and the extraordinary figure to which the labor cost of the crop is now rising. On a visit to the cotton belt last Summer the writer obtained from a reliable source a careful calculation of the various items of the cost of cotton growing in Texas. The result is almost incredible, for it showed that the mere cost of labor on the farm in question, which seldom produces so good a crop as half a bale an acre, was no less than 11.25 dollars per acre. Picking alone cost on the average over the whole season about 85 cents per 100 pounds of seed cotton, 2½ cents per pound of lint. The total value of the crop, assuming the yield to be half a bale an acre, and that the cotton was classed as middling, at say 12 cents per pound, and including the value of the cotton seed at 20 dollars per ton, was only 35 dollars per acre, so that the labour cost alone was nearly one-third of the gross value of the crop, at an outside figure.

It is, of course, true that the cost of labour is lower in other parts of the belt—the cost of picking in the Mississippi Valley, for instance, may be nearer 1½ cents per pound than 2 cents, but this is offset by the fact that the yield of half a bale per acre, on which the above calculation is based, is distinctly above the average, and that the price of 12 cents per pound is far above the average realized by most of the small planters. It is on the small planter, whose yield may not exceed one-third of a bale per acre of low-grade cotton, that the heavy labour cost tells most hardly, and the only way he can make ends meet at all is by having most of the work done by himself and his family. This is all very well for the small negro cultivator, but it will not do at all for the white planters, who are very numerous in Texas, and who under more favorable conditions would have been the most hopeful factor for the improvement and extension of the crop. It must be remembered that Texas and Oklahoma alone account for more than 75 per cent of the increase of area in the last ten years, and between them they now produce about 6,000,000 bales per annum.

All this is a striking commentary on the history of the Civil War, for the chief argument of the planters in favor of slavery was that cotton was a cheap labor crop, and could not possibly be cultivated without slave labor. The descendants of the liberated slaves could now earn a dollar a day all the year round if they were willing to work steadily, while a good picker in the height of the season can earn as much as two or three dollars in a day. In certain parts of the belt, especially Texas, the labor supply even at such prices is hopelessly inefficient. The steady flow of immigrants of almost every nationality under the sun is swallowed up as fast as it comes, and the labour question shows no sign of becoming any less pressing. This difficulty was especially felt last year owing to the Mexican War, which interfered with the usual supply of transitory labor from across the border, and it is probable that this shortage will be at least as marked during the coming season.

But labour is not the only item of cost which has increased seriously in recent years. Farm implements, horses or mules, and food of all kinds, both for man and beast, have gone steadily up in a way which goes far to explain the recent revulsion of feeling in America against protection. It is said that the general level of prices in America has increased during the last fifteen years nearly 50 per cent as compared with 25 per cent in this country; and the cost of living has become burdensome in the extreme.

The result is that the supposed enormous profits of the cotton grower are a very doubtful quantity; it is questionable whether the growers are any better off now with cotton round about 12 cents per pound than they were in the old days with half the price. For it must be remembered that the basis price in Liverpool and the average price which the ordinary small grower gets for his crop, taking it all over, are very far apart. In the first place, the uncertainty of the climate during the picking season, and the impossibility, owing to lack of labor, of taking advantage of a good spell of weather to get the whole crop gathered in good condition, frequently result in serious deterioration of a large proportion of the crop. Heavy rain in Autumn not only deteriorates the character of the lint directly, but it also splashes the mud up into the open bolls, producing tinged or stained cotton, with the result, for example, that the planter, whose figures are quoted above, actually received only 6 cents per pound for a considerable part of his crop. It is this state of affairs which is largely responsible for the noticeable increase in low-grade cotton during the last few years. The tradition in Lancashire that a big crop meant a good crop was ruthlessly upset in 1911-12 for the simple reason that the crop was so enormous that it could not be picked. There was cotton still hanging unpicked on the plants in the following March. As one large planter put it to the writer, "We are growing a 20,000,000 bale crop and only harvesting 15,000,000, and a large part even of that in bad condition."

Again, when the crop is havested the buying system is none too favorable to the small grower. Most of the large export houses are, of course, above suspicion; but, in addition to their representatives throughout the belt, there is an army of small middlemen who buy cotton in the country towns and villages and resell it to the shipping houses, from whom they receive the fair market value of the cotton. Their only chance of a profit, therefore, is to pay the farmer less than the market value, and as the average small planter knows too little of the grade of his cotton to question the buyer's valuation, it becomes simply a question of bargaining power, in which the seller on the whole is likely to prove the weaker party.

Taking all these things into account, cotton growing, especially for the small farmer, is by no means a gold mine, and many of them would clear out of it if they could. Making all due allowance for the traditional grumbling propensity of the farmer, the present position of the cotton grower is nothing like so satisfactory as people in this country suppose; it is certainly not sufficiently attractive to produce the large and rapid increase of supply which Lancashire at present requires.

The remedy is easier to point out than to enforce. Failing the invention of a really satisfactory mechanical picker, the labor difficulty will not be overcome for many years, and the only way to meet it is to increase the value of the crop by improving both the

average yield and the quality of the staple. There is no doubt at all that this could be done if the farmers were in a position to take advantage of all the facilities for improvement that are now available, and were encouraged to do so. Anyone who has gone through the belt with his eyes open must be convinced that the present condition of affairs could be very materially improved in many respects, and that the planter might be much better paid for his work without really costing the spinner anything, for Lancashire has never grudged to pay a better price for a superior article. There is great need of closer communication between producer and consumer, whose interests are in the long run far less irreconcilable than they seem.

THE GROWTH OF BANKING

SIR GEORGE PAISH, editor of "The Statist" of London, contributes to the Foreign Banking Section, an annual feature of that publication, a characteristically interesting and informative review of the growth of the world's banking. "Comprehensive data," he says, "do not exist for making exact calculations of the total accumulation of capital in all countries, and the manner in which it is rendered available for productive purposes by public and private investments; nevertheless, the available information as to the productions of foodstuffs, of raw textiles, of minerals, and of manufactured goods shows clearly that both wealth and income are everywhere growing with amazing rapidity, and that the increasing well-being of the world is bringing about a vast growth both in international commerce and in national trade. One of the best guides we possess to the expansion in production and in consumption is the growth of banking, the primary object of which is to finance trade and commerce between producer and consumer. The extension of banking and the expansion in trade are, indeed, closely related. If production does not increase, trade does not expand and banking deposits do not become greater; whereas a great expansion in production and in trade invariably brings with it a corresponding growth of banking. In these days the one cannot expand without the other. Hence a complete survey of the expansion in the world's banking would give a fairly accurate conception of the growth of the world's trade. It is true that the amount of banking money required by trade fluctuates in some degree with the movement in the prices of commodities; in periods of dear commodities more banking accommodation is needed than in periods of low prices. Nevertheless, the growth of banking is a very good indication of the expansion in production and in trade. The index-number of forty-five commodities in 1880 was eighty-eight, while in the past year it was eighty-five, a difference slightly in favor of the earlier year, and in this period the deposits of the banks of the United Kingdom have grown from £450,000,000 to £1,138,000,000, an expansion of no less than £688,000,000, or over 150 per cent, in a single generation of thirty-three years. We would point out that this comparison is an accurate one, as we have made allowance for the deposits of private bankers whose businesses have been absorbed by joint-stock banks since 1880."

It is shown that deposits in German joint-stock banks increased from £23,000,000 in 1876 to £468,000,000 in 1912, while deposits in German savings banks grew from £93,000,000, in 1875, to £1,000,000,000 in 1913. Deposits in French savings banks increased from £21,480,000, in 1872 to £228,484,000 in 1911. Deposits in all classes of banks in the United States increased from £440,000,000 in 1880 to £3,604,000,000 in 1913. Deposits in chartered banks of Canada, increased from £18,100,000, in 1880, to £241,500,000 at the end of 1913. Deposits in the ordinary and savings banks of Australia, aggregated, increased from £28,834,000 in 1871 to £269,643,000 in 1913.

"No statement that can be presented," says the review, "will strike the imagination more forcibly than one which gives the individual deposits of all the great banks of the world possessing deposits of £20,000,000 and over. If it be borne in mind that a generation ago the number of great banks with deposits of this sum and over could be counted on one's fingers, that the greatest of them in those days had deposits of no more than £36,000,000, that at the present time there are no less than sixty-one banks with deposits exceeding £20,000,000, and that the deposits of individual banks in these days range up to £126,000,000, some conception can be gained of the influence now exerted by banking on the world's affairs. It is true that the great increase in deposits of individual banks has come in some measure from contributions and absorptions. But while this circumstance explains in part the really enormous growth in the deposits of certain banks, it does not affect the great increase in the number of banks possessing deposits of over £20,000,000 per institution. Indeed, had there been no amalgamations the number of banks possessing this amount of deposits would probably have been still greater than sixty-one. The growth in the size of deposits of individual banks in itself reflects the spirit of the time—the desire to act in co-operation and in combination with others. In the old days people with money favored the private banker, who was entrusted with the secrets of his customers and who guided them with his advice. In these days the private banker has almost ceased to exist, the great banks offering a much greater measure of security to depositors and performing many other services for them at small or no charge. Just as thousands of persons will in these days entrust themselves to the care of the captain of a single great ship and derive an increased measure of safety and protection, so multitudes of persons entrust their cash balances to the care of a single institution, believing their money to be safer and more secure the greater the institution. This tendency to combine and co-operate for mutual advantage has extended to every country, and all over the world great banks have arisen which gather together money that would otherwise lie idle in tills and in boxes, and thus render the sums of great value not only to those who possess them, but to the whole community, by employing them to finance both national trade and international commerce. In fact, trade and commerce could not have expanded to their existing vast proportions but for the growth of banking, the introduction of the cheque and the bill, and the ability to send money by telegraph and by cable in a few minutes or in a few hours from town to town and from country to country. But not only does banking now provide the greater part of the world's currency in the cheque and in the bill; it also provides the machinery for the whole credit system. Moreover, from time to time the growth of trade is seriously hampered by the unwillingness of investors to provide the necessary capital for its expansion, and banking plays a powerful part in preventing a breakdown of the system until investors regain their confidence. Sometimes, however, the situation is reversed. Bankers suffer from nervousness, and are unwilling to lend banking money freely, while investors maintain their confidence and supply capital for purposes for which banking money would normally be employed.

"Thus the great monetary stringency which arose in 1913, came in part from the desire of bankers in many countries not to extend their loans in a period of uncertainty. But any disturbance to credit was prevented by the continued confidence of British investors, who supplied investment money to the whole world with a freedom never witnessed before, and thus enabled numbers of

persons and undertakings in many countries to repay loans obtained from bankers.

"One of the advantages derived from the credit system in these days lies in the fact that the savings and the cash balances of nearly everyone, apart from persons in the backward countries who hoard their money, are rendered available in the shortest possible space of time for use in any part of the world in which they are needed. In the old days, when affairs were governed by a policy of distrust and isolation, each country had to rely entirely upon itself for the capital with which to develop its resources, and for the cash needed to get through any temporary trouble or disaster. In these days, however, when the interests of each country are knit with all other countries, and of each individual with all other individuals, the capital resources of the whole world are rendered available for expanding the productive power of each and every country, and the money of all the world is placed at the disposal of every country which lives up to the world's standard of honor and fair dealing.

"Beyond the powerful assistance rendered to world production by British investors and to international commerce by the employing of a large part of the funds of purely British banks in the discount of the bills of all nations, a host of Anglo-Indian, Anglo-Colonial and Anglo-Foreign banks operate in all parts of the world. The capital of these banks is provided in this country, and no inconsiderable amount of their deposits is also British. Beyond placing a great deal of money at the service of the countries in which they do business, these banks provide the machinery by means of which other countries are able to obtain large quantities of additional banking money and of capital from Great Britain. In the present special number will be found particulars of all Anglo-Indian, Anglo-Colonial and Anglo-Foreign joint-stock banks working abroad with British capital and under British direction. Space has compelled us to restrict our description of purely foreign banks to the great banks of each country whose affairs are of special interest to our readers, either from the point of view of their great power and influence on international monetary conditions, or because of their relations and connections with international banks in general, and the banks of this country in particular. The following is a statement of the world's banks with deposits of over £20,000,000:

DEPOSITS OF THE WORLD'S GREAT BANKS, END 1913 AND IN 1880.

		Deposits and Current Accounts. 1913.	1880.
1	Imperial Bank of Russia	£125,928,000	£37,971,000
2	Lloyds Bank	104,306,000*	5,785,000
3	London City and Midland Bank	93,834,000	.....

NATIONAL BANKS IN THE UNITED STATES WITH GROSS DEPOSITS IN EXCESS OF $25,000,000

Forty-nine National banks in the United States reported gross deposits of more than $25,000,000 each on June 30, 1914, the date of the Comptroller of the Currency's last call for condition. This number compares with forty-eight at the previous call on March 4, 1914, and includes seventeen New York, five Chicago, six Philadelphia, three Boston and three St. Louis banks. Following is the list:

	Gross Deposits. June 30, 1914.
City, New York	$274,114,000
Continental and Commercial, Chicago	175,315,000
Commerce, New York	155,020,000
Chase, New York	151,037,000
First, New York	124,893,000
Mechanics and Metals, New York	122,662,000
First, Chicago	116,658,000
Hanover, New York	119,802,000
Park, New York	111,294,000
Shawmut, Boston	98,225,000
First, Boston	83,159,000
American Exchange, New York	75,320,000
Corn Exchange, Chicago	61,251,000
Philadelphia National, Philadelphia	56,994,000
Irving, New York	56,478,000
Mellon, Pittsburgh	47,469,000
Fourth Street, Philadelphia	47,274,000
First, Detroit	45,917,000
Marine, Buffalo	45,796,000
Commerce, St. Louis	43,647,000
Girard, Philadelphia	41,716,000
Merchants, Boston	40,512,000
Bank of California, San Francisco	37,798,000
New York, New York	37,678,000
First, Cleveland	35,941,000
Franklin, Philadelphia	35,612,000
Seaboard, New York	35,506,000
Fr. Dearborn, Chicago	35,267,000
Liberty, New York	33,587,000
Third, St. Louis	32,919,000
Northwestern, Minneapolis	32,042,000

	June 30, 1914. Gross Deposits
Mechanics American, St. Louis	31,471,000
Anglo-London-Paris, San Francisco	30,499,000
Chemical, New York	29,745,000
Merchants, New York	28,509,000
City, Chicago	28,326,000
Farmers Deposit, Pittsburgh	28,073,000
Importers and Traders, New York	27,498,000
First, St. Paul	27,484,000
Corn Exchange, Philadelphia	27,392,000
Chatham and Phenix, New York	27,140,000
Citizens Central, New York	27,035,000
First, Philadelphia	26,692,000
Bank of Pittsburgh, Pittsburgh	26,425,000
Wells Fargo Nev., San Francisco	25,963,000
First, Kansas City	25,941,000
Commercial, Albany	25,798,000
Manufacturers and Traders, Buffalo	25,679,000
First, Minneapolis	25,564,000

INDUSTRY, COMMERCE AND FINANCE

Foreign Commerce of the United States for the Fiscal Year, 1913-1914.—Preliminary figures have just been issued by the Bureau of Foreign and Domestic Commerce of the United States Department of Commerce for the foreign commerce of the United States for the fiscal year ended June 30, 1910. These figures show that, during 1913-1914, the imports into the United States aggregated in value $1,894,169,180, an increase of $81,160,946, or 4.47 per cent, over the value of the imports for 1912-1913. The exports of domestic goods from the United States during the past fiscal year were of the value of $2,329,731,886, a decrease of $98,774,472, or 4.07 per cent, from the previous year. Foreign goods re-exported were of the value of $34,894,669, or $2,483,122 less than for 1912-1913. Combining these figures it is found that the total foreign trade movement of the country in 1913-1914 was of the value of $4,238,795,735, a decrease of but $20,096,648, or less than one-half per cent, from 1912-1913, which established the high record for our foreign commerce. The highest previous record was exceeded in 1913-1914 by $401,208,392.

For the month of June, imports aggregated $157,772,973, an increase of $26,527,096 over June of last year; being, however, $6,436,542 below May, $16,122,803 below April, and $24,782,331 below March of the current year. Total exports during June were valued at $157,119,451, a decrease of $6,285,465 compared with June, 1913, and being $4,613,168 below May, $5,433,119 below April, and $30,379,783 below March of the current year. For the month of June, imports exceeded exports by $653,522, compared with an import excess of $2,476,896 in May and $11,339,544 in April.

About 59½ per cent of the imports in June and the fiscal year which ended with June, entered free of duty, against 54½ per cent in the year before.

The excess of exports over imports for the year ended June 30, 1914, was $470,457,375, against an excess of $652,875,915 in the year ended June 30, 1913, $551,057,475 in the year ending June 30, 1912, $522,094,094 in the year ended June 30, 1911, $188,037,290 in the year ended June 30, 1910, and $351,090,880 in the year ended June 30, 1909.

Gold imports aggregated $66,538,659, and gold exports, $112,038,529; while silver imports aggregated $30,326,604, and silver exports $54,965,022 during the year.

Operating Revenues and Expenses of Railways in the United States, 1912-1913.—According to the belated statistics compiled and issued by the Interstate Commerce Commission, the operating revenues of the railways in the United States (average mileage operated, 242,657.12 miles) for the fiscal year ended June 30, 1913, were $3,125,135,798, and the operating expenses were $2,169,968,924. For the fiscal year 1911-1912 (average mileage operated, 238,220.11 miles), the corresponding figures were: Operating revenues, $2,826,958,366, and operating expenses, $1,959,094,658. It is to be remembered that these figures do not include, on the one side, income derived from sources other than operation proper,—i.e. interest or dividends on securities held, rentals, profits on sales of property, etc.,—nor, on the other side, expenses in the way of interest paid on indebtedness, dividends on stock, taxes, depreciation, etc. They afford, therefore, only an approximate idea of how the railways fared.

The details of the operating revenues and expenses for 1912-1913, by main classes of both, are shown in the following table:

OPERATING REVENUES FOR 1912-1913.

Freight revenue	$2,198,930,565
Passenger revenue	695,987,817
Excess baggage revenue	7,607,802
Parlor and chair-car revenue	715,566
Mail revenue	50,789,212
Express revenue	79,717,266
Milk revenue (on passenger trains)	9,057,591
Other passenger revenue	6,110,252
Switching revenue	33,248,734
Special service-train revenue	1,980,362
Miscellaneous transportation revenue	6,861,901
Total revenue from operations other than transportation	31,628,843
Joint facilities—Dr.	1,054,003
Joint facilities—Cr.	3,553,890
Total operating revenues	$3,125,135,798

OPERATING EXPENSES FOR 1912-1913.

Maintenance of way and structures	$421,232,395
Maintenance of equipment	511,561,363
Traffic expenses	62,850,113
Transportation expenses	1,096,252,745
General expenses	78,072,308
Total operating expenses	$2,169,968,924

* * *

British Trade in June.—The British Board of Trade returns for June show that the imports into Great Britain during that month were of the value of £58,272,042, or less by £37,477 than those of June last year. The exports show a larger decrease, the total being £39,872,976, against £42,836,568 last year, a difference of £2,963,592. For the six months ended with June the imports totalled £375,883,290, as against £378,746,000 for the corresponding half of 1913, showing a decrease of £2,862,710. The exports for the same period amounted to £255,457,611, as against £257,055,808, or a decrease of £1,598,197.

Estimated Population of the United States, July 1, 1914.—An estimate of the population of the United States,—both Continental United States and its Territories,—as of July 1, 1914, has been prepared by C. S. Sloane, geographer of the Department of Commerce; and the main results have been published in the journal "Science", issue of July 17, 1914. In the form of a bulletin the study will shortly be issued by Wilbur J. Harris, Director of the Bureau of the Census, of the Department of Commerce. The particular purpose in preparing the estimate (or estimates) is to provide the Bureau of the Census wih a basis for the computation of death rates and other per capita averages in the years between the decennial census years proper. The starting point of the calculations was, of course, the stated census of 1910. The method adopted, as having been found by experience to yield the most accurate results, was the simplest of all for such computations,—i. e. the purely arithmetical method. It was assumed that the increase of population each year since the census

equal to the average annual in-

This assumption, of course, presup-

that there has not been a suf-

true, the death rate and the immigra-

material effect upon the results obtained.

the method the conclusion has been arrived at

population of the United States (including

Continental United States) was on

July 1, 1914, a total of 109,021,992 persons, as compared with

101,738,261 persons in 1910, a gain of 7,273,723 persons. The

population of the Continental United States,—i. e. the forty-

eight States and the District of Columbia,—is estimated at 98,-

781,324 persons in 1914 as compared with 91,972,266 persons in

1910. The following table gives the estimated population of each

of the forty-eight States and of the District of Columbia on July

1, 1914, with the corresponding figures of the decennial census

proper, taken on April 15, 1910:

State.	Population—Estimated, July 1, 1914.	Population—Census, April 15, 1910.
Alabama	2,269,945	2,138,093
Arizona	239,053	204,354
Arkansas	1,686,480	1,574,449
California	2,757,895	2,377,549
Colorado	909,537	799,024
Connecticut	1,202,688	1,114,765
Delaware	209,817	202,322
District of Columbia	353,378	331,069
Florida	848,111	752,619
Georgia	2,776,513	2,609,121
Idaho	395,407	325,594
Illinois	5,986,781	5,638,591
Indiana	2,779,467	2,700,876
Iowa	2,221,755	2,224,771
Kansas	1,784,897	1,690,949
Kentucky	2,350,731	2,289,905
Louisiana	1,773,482	1,656,388
Maine	762,787	742,371
Maryland	1,341,075	1,295,346
Massachusetts	3,605,522	2,366,416
Michigan	2,976,030	2,810,173
Minnesota	2,213,919	2,075,708
Mississippi	1,901,882	1,797,114
Missouri	3,372,886	3,293,335
Montana	432,614	376,053
Nebraska	1,245,873	1,192,214
Nevada	98,726	81,875
New Hampshire	438,662	430,572
New Jersey	2,815,663	2,537,167
New Mexico	383,551	327,301
New York	9,899,761	9,113,614
North Carolina	2,339,452	2,206,287
North Dakota	686,966	577,056
Ohio	5,026,898	4,767,121
Oklahoma	2,026,534	1,657,155
Oregon	783,239	672,765
Pennsylvania	8,245,967	7,665,111
Rhode Island	591,215	542,610
South Carolina	1,590,015	1,515,400
South Dakota	661,583	583,888
Tennessee	2,254,754	2,184,789
Texas	4,257,854	3,896,542
Utah	414,518	373,351

Washington	1,407,865	1,141,990
West Virginia	1,332,910	1,221,119
Wisconsin	2,446,716	2,333,860
Wyoming	168,736	145,965
Totals	98,781,324	91,972,266

* * *

Six Months' Building Operations.—Reports to Bradstreet's from 150 cities of the United States show that during the first half of 1914 building permits were issued to the number of 145,026, as against only 141,767 permits in the like period of 1913, a gain of 2.3 per cent. These figures would indicate that more structures were built this year than last, but the estimated value of the building done or permitted to be done was $438,769,000 this year for six months, as against $472,667,000 in 1913, a decrease of 7.1 per cent. The summary of the six months' building for the years 1914 and 1913 follows:

(Three figures omitted in values.)

	Number of Cities.	No. Permits—1914.	No. Permits—1913.	Expenditures—1914.	Expenditures—1913.
New England	24	9,275	10,106	$38,572	$39,248
Middle	34	32,484	32,462	153,850	164,507
Western	34	40,344	39,179	127,526	127,075
Northwestern	14	11,435	10,094	35,701	29,057
Southern	23	21,185	21,501	36,051	44,144
Far-Western	16	30,303	28,425	47,069	68,636
Total United States	150	145,026	141,767	$438,769	$472,667
New York City	1	8,799	8,324	$78,003	$84,777
Outside New York	149	136,227	133,443	360,766	387,890

* * *

The Trade of Ireland.—The total import and export trade of Ireland in 1912, according to statistics recently made available by the Department of Agriculture and Technical Instruction of Ireland, was valued at $685,035,972, as compared with $642,143,478 in 1911, an increase of $42,892,494. The imports were valued at $355,931,522, and the exports at $329,104,450. These statistics include the direct trade between Ireland and all other countries outside of Great Britain, the direct trade of Ireland with these same countries via Great Britain, and the local trade between Ireland and Great Britain.

Of the total value of the imports into Ireland, for 1912, 36 per cent represented articles of food and drink, 49 per cent manufactured goods, and 15 per cent raw materials. Although Ireland is largely devoted to agriculture, approximately $107,000,000 worth of farm products were imported.

Of the exports out of the country, 52 per cent represented articles of food and drink, 41 per cent manufactured goods, and 7 per cent raw materials.

The direct imports of foreign and colonial goods into Ireland during 1912 were valued at $85,159,818, whereas the direct exports amounted to $6,507,829, of which $4,549,199 consisted of re-exports of foreign and colonial goods. But as regards the direct foreign and colonial trade of Ireland which passes to and from the Irish ports via those of Great Britain, especially Liverpool and London, there are at present no means of distinguishing this from the foreign and colonial trade of that country. Consequently the total trade of Ireland with countries outside of Great Britain can not at present be ascertained.

* * *

Belgian Cement Exports.—Belgian cement exports for the first quarter of the present year aggregated 145,683 tons, contrasted with 224,179 tons during the corresponding period of 1913, the decrease being 78,496 tons, or 35 per cent. Exports to Argentina showed a particularly heavy decline, amounting to 30,766 tons, as compared with 67,944 tons in 1913, a decrease of 37,178 tons, or nearly 55 per cent.

* * *

Area and Population of Servia.—Before the recent wars with Turkey and Bulgaria, Servia was divided into eighteen districts. The area of the country was 18,644 square miles, with a population of 2,911,701. Servia acquired as a result of the wars, territory to the extent of 14,668 square miles, with a population of 1,481,614. The total area of the country to-day is, therefore, 33,312 square miles, with a total population of 4,393,315. The new territory has been divided into twelve administrative districts, making a total of thirty administrative districts in the whole country.

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

IT is the fashion in these days to take a shot at the New York, New Haven and Hartford Railroad. The heavy firing comes from the Interstate Commerce Commission and the Department of Justice. United States Senators and Congressmen keep up a more or less continuous fusilade in their speeches. The sensational newspapers serve as irregulars, and fire at will at whatever head is shown. There are also what we have come to know, since the affair at Vera Cruz, as "snipers." One of these last is the Superintendent of Insurance of Illinois, Mr. Rufus M. Potts. From the recesses of his annual report upon the condition of insurance and of insurance companies doing business in Illinois, Mr. Potts aims his official gun at the New Haven Railroad. He declares that he has discovered that forty-three fire insurance companies doing business in Illinois are holders of stocks and bonds of the New Haven itself, to say nothing of investments in many of the corporations subsidiary to the New Haven. The value put by the fire insurance companies upon the New Haven stocks and bonds they hold is almost $7,000,000. In Mr. Potts' words: "The companies have reported this worthless stock to the Department at the above figure." The companies most culpable are those of New England and New York,—the strongest and best managed fire insurance companies in the country, though Mr. Potts does not say this. He forgets also to say that if he had examined the investments of the New England and New York life insurance companies, casualty and liability insurance companies, surety companies, etc., he undoubtedly would have found bonds and stocks of the New Haven Railroad to a much larger amount than $7,000,000. We should not be surprised if he found the New Haven holdings of all these companies,—or such of them as do business in Illinois,—nearer $50,000,000 than $7,000,000. At any rate, in one respect Mr. Potts has done his full duty: he has reported what he has found in the fire insurance companies to the United States Government's investigators of the New Haven Railroad, and has requested them to make a special point of ascertaining the investment relations of the companies with the railroad, i. e. the inner meaning of "their enormous so-called investments."

It is an unfortunate fact that insurance companies have to invest the funds contributed to them by their insured and held by them as trustees to be paid over upon the occurrence of the eventualities against which insurance is taken out. It is only in this way that real cheapening of insurance is possible and, at the same time, that insurance as a whole is able to play a beneficent double part towards society, that of providing indemnities for losses and that of serving as reservoirs of capital for the constructive requirements of the community. Though we can never be quite sure of the slant that Mr. Potts' mind will take as regards any matter, we presume that even he would object to having the insurance companies taking in premiums and lock them up in safety deposit vaults until they should be needed for the payment of losses. But however Mr. Potts may view the matter, it can scarcely be doubted that the sane public expects the executives and directors or trustees of insurance companies to invest the funds entrusted to them and to make them earn as much as possible, to the end that insurance premiums may be as low as possible. But investment means risk, just as much as insurance itself does. There are no risk-proof investments. Even Government, State and municipal securities can do strange and wonderful things. Thus the British, French and German insurance companies have, within the past decade, lost something like one-quarter of the capital value of their investments in the public securities of their respective countries. Had it not been for the artificial value given to United States Government bonds by the operation of the National banking system, insurance companies investing in them fifteen years ago would by now have lost probably 40 per cent of the capital value of their investment. The insurance companies' holdings of the bonds of New York City issued in the late 90's have lost about 20 per cent in capital value since they were purchased. Such is the uncertainty of the very cream of "so-called investments." What has Mr. Potts to say to this? Who, in his opinion, should investigate the relations of the buyers of these securities with the governments and the municipalities that issued them?

The truth is, of course, that insurance executives and directors or trustees must invest and invest in those securities which, in their judgment, are the safest and best of those offering. But it is a foregone certainty that some of these investments will go wrong, just as it is a foregone certainty that fire insurance companies will have occasional conflagrations to pay for, life insurance companies occasional epidemics to lift their death rate above the normal, and liability companies occasional catastrophes calling for the payment of abnormal losses. Investment is a matter of average, just as much as insurance is; and wise investment provides so wide an average that losses here and there, like those now being undergone with the securities of the New Haven Railroad, produce no crippling effect. It is worth noting, by the way, that not one of the forty-three New England and New York fire insurance companies which Mr. Potts holds suspect for owning $7,000,000 worth of New Haven bonds and stocks appears to be in financial straits or in any danger of being unable to fulfill its contracts of insurance to the letter.

THE primacy of the United States among all the countries of the world in the matter of life insurance has once more been illustrated by the publication this week by the Superintendent of Insurance of New York of the portion of his annual report dealing with the life insurance companies admitted to do business in this State. The figures are truly enormous, though they fall somewhat below the figures for virtually all the life insurance companies doing business in the United States, as compiled by our contemporary, "The Spectator" [See THE MARKET WORLD AND CHRONICLE, April 11, 1914, page 459]. According to Superintendent Hasbrouck's statistics, however, the vast excess of aggregate and per capita life insurance in this country over that in any other country on the globe clearly appears. This can best be brought out by comparing the premium income of the companies doing business in the State of New York with the premium income of life insurance companies in the chief countries of Europe. According to the present report the premium income of the American companies in 1913 was $628,650,211 (according to "The Spectator's" figures for all companies in the country, $712,865,815). Now the total premium income of the fifty-one German life insurance companies, in 1913, was 734,171,000 marks [$174,732,698]. In Great Britain the official Blue Book for 1914, issued by the Board of Trade, gives as the life premium income of seventy-six companies writing life insurance the sum of £46,819,196 [$228,477,566]. These figures, however, are derived only from the latest

[illegible] for 1912 and some for [illegible] the French, the premium income for 1913 is not at hand, but the [illegible] reported by the fifteen French companies in that year [illegible]29 francs [$121,259,228], as compared with [illegible] alone of $1,856,464,981 written by the [illegible] in the State of New York. The premium [illegible] companies doing business in Italy in 1912 was [illegible] [$7,389,509]. In Spain, in 1912, the premium income of [illegible] three companies was 24,258,405 pesetas [$4,681,872]. In Holland, with her extraordinary number of small life companies,—no less than eighty,—the total premium income in 1912 was about 60,000,000 florins [$24,120,000]. Finally, in Austria-Hungary, where the 1913 premium income is not yet made public, the new business for that year amounted to 930,335,331 kronen [$188,858,077], or about one-tenth of the new "ordinary" business written by the companies doing business in New York. Such are the extraordinary disparities between life insurance in the United States and in the most important countries of Europe.

AN ADVOCATE OF FEDERAL REGULATION OF INSURANCE TAKES "SCRUTATOR RERUM" TO TASK

To the Editor of The Market World and Chronicle:

SIR: In your issue of July 11 a Perplexed Observer of Things presents dubieties on the current movement to nationalize the supervision of insurance. The Joint Resolution looking to this end, now in Congress, was prepared by me and introduced in January of the present year by a Massachusetts Senator and a Representative of this Commonwealth. My interest in insurance supervision antedates my former connection with the "Journal of Insurance Economics," as associate editor. Having dabbled to some extent in Constitutional law, it has appeared to me that, to be obtained at all, Federal supervision must come through a Constitutional Amendment, giving Congress express power to regulate the business. In the "Insurance Press," of November 2, 1910, I expressed the opinion that the supposed difficulties in the way of securing an amendment to the Constitution which shall give Congress exclusive power to legislate for insurance regulation are not so great as is commonly supposed; and I predicted that such an amendment might be secured in less than a decade. After the Deer Lodge County decision of November last [New York Life Insurance Company vs. Deer Lodge County, Montana], the time seemed ripe to consider the "commerce clause chapter" closed and to begin the agitation for a Constitutional Amendment. With characteristic promptness President Kingsley at once took an active interest in the proposal and addressed a circular letter to the Nation's insurance executives, asking for their views on urging the adoption of a Constitutional Amendment. My own proposed amendment reads as follows:

"Article I, Sec. 8, Clause 19. The Congress shall have power to regulate the business or commerce of insurance throughout the United States and its territories and possessions."

A Joint Resolution embodying the amendment is now in the hands of the Judiciary Committee of each house of Congress. There it is understood, a call for a hearing for public hearings. President Kingsley is inviting the cooperation of insurance companies before beginning the campaign actively in Congress.

It is an amazing and somewhat melancholy fact that American Constitutional history is [illegible] read by people in general. As a consequence, incorrect views of the fundamental organization of our Government [illegible] and are accepted, without a thought of challenge save by a few students here and there. In the present instance, "Scrutator Rerum" says: "Mr. Kingsley is using every means within his power to overthrow, or at least to circumvent, the time honored decision of the United States Supreme Court in the case of Paul vs. Virginia, wherein the court decided once, and apparently irrevocably, that a contract of insurance is not commerce, hence cannot under any circumstances be interstate commerce and so fails to come within any of the enumerated powers of the Federal Government." Please observe that it is the function of the Court to interpret the Constitution. In so doing it has decided that insurance is not commerce and therefore not within the scope of Article I, Sec. 8, Clause 3, viz., (Congress shall have power) "to regulate commerce with foreign nations and among the several States and with the Indian tribes." This decision, while binding until the fundamental law is changed, is merely the view of the Court and not at all "irrevocable." It may not even be in accordance with the actual fact. In all European countries where Government takes cognizance of insurance at all, it is regarded and treated as commerce. The Constitution of 1898 of the Commonwealth of Australia vests the control of interstate insurance in the Central Government, while in France, after a thorough consideration of the subject in 1903, the insurance business of that country was placed under the control of the Minister of Commerce. Only in the United States does there remain a decentralized system of many separate departments supervising a business which would be much better taken care of by a single thoroughly organized and ably equipped department. The Supreme Court is not sovereign and makes no pretensions that it is. It is not even given the power to construe acts of Congress by the Constitution itself; but since Chief Justice Marshall's opinion in Marbury vs. Madison it has assumed the power to construe acts of Congress and the people have acquiesced. That is all there is to the matter. The practical result, however, is that until the people see fit to deprive the Court of its assumed function it remains the authoritative interpreter of the Constitution. Therefore the elaborate decision in the Deer Lodge County case definitely closes the agitation to have insurance classed as commerce under *the present Constitution*. But there is no sacrilege involved in changing the Constitution. The makers of the Constitution refused to proceed with their work until an adequate provision for future amendment was made, as may be learned from a perusal of "Elliott's Debate." The machinery was purposely made cumbersome, not as often supposed to discourage amendment, but to prevent hasty action in times of political excitement. It follows easily then that if by amendment the Constitution shall say that insurance is commerce, the Supreme Court, as subordinate thereto, must immediately be governed in its decisions by such law.

"Scrutator Rerum" next inquires whether Federal regulation would oust State control? Could not the several States, he asks, still regulate and tax insurance? In the dog-days of 1913 I anticipated such inquiries and answered them in the course of a short article in "The Standard," of Boston,—prompted thereto by the Minnesota Rate Decisions, which were then still fresh and full of significance to the advocates of the Federal regulation of insurance. In Simpson vs. Shepard, the Court says: "The power of Congress to regulate commerce among the several States is supreme and plenary. It is complete in itself, may be exercised to its utmost extent and acknowledges no limitations other than are prescribed in the Constitution." Previously, Chief Justice Marshall had said: "There is no room in our scheme of government for the assertion of State power in hostility to the authorized exercise of Federal power." And as late as December 15, 1913, in the Deer Lodge County case, the Court said: "We have already pointed out that if insurance is commerce and becomes interstate commerce

whenever it is between citizens of different States, *then all control over it is taken from the States and the legislative regulations which this court has heretofore sustained must be declared invalid.*" I do not understand what "Scrutator" means when he says "Why not go straight to the goal and if a Constitutional Amendment is practicable, have the power to regulate insurance in and for itself conferred upon the Federal Government?" What does he think the amendment proposed is intended to obtain, if not jurisdiction as plenary and final for Congress as in bankruptcy, banking, post roads and all other categories named in Section 8? "Scrutator" should observe again and tell us. He says again that the decisions of the Supreme Court that insurance is not commerce "must rest upon the tradition of the law and the general judgment of mankind". Where and when are these traditions to be found? I had always supposed insurance law to be largely derived from the *lex mercatoria;* and if the transactions of merchants are not commerce, what are they? And again I inquire, why cannot the "people of the United States alter this judgment", if need be? For speculation as to the status of insurance after the adoption of an amendment placing the regulation of insurance in the hands of the National government, let me recommend consideration of the standing of National Banks. These are purely local institutions as to personnel and business, yet they are under National control exclusively and, except as to property within local jurisdiction, free from municipal or State taxation. Then again, consider how the passage of a National Bankruptcy Act suspended automatically all State insolvency laws of the country. In Massachusetts, our insolvency laws are not repealed. They still stand on our statute books. They are inoperative, however, while the National Bankruptcy Law lives; upon its repeal our local statutes immediately revive. The fears of an additional authority in case of National control are groundless. In the light of the German Alliance Insurance Company vs. Lewis decision, of April 20, 1914, [Kansas Fire Insurance Case], it is absolutely imperative.

To paraphrase Cato's famous expression, "the Constitution must be amended". Yours truly,

Boston, Mass., July 15, 1914. SAMUEL DAVIS.

[Upon submitting this interesting and instructive letter from Mr. Davis to "Scrutator Rerum" for comment, we have recieved the following response.—Editor.

Inasmuch as both President Kingsley (see his letter to you and his communication to the insurance executives, summarized by you last week) and Mr. Davis state that recourse to the interstate commerce clause of the Constitution has now been abandoned by the leaders of the movement to nationalize insurance, it would be a work of supererogation now to discuss at length the contention that insurance is commerce or could be made so by legislative fiat. I feel inclined, indeed, to say a few words further upon this subject and before concluding shall ask for a little of your space so to do. The main matter, however, is that the Federal regulation campaign (without my being aware of it) has been switched from its indirect course of reaching the desired result through the medium of interstate commerce, to the direct course of procuring a Constitutional Amendment conferring upon Congress the unrestricted power of regulating the business of insurance. As I said in my previous letter, this seems to me eminently wise, from the point of view of those desiring to supersede State regulation of insurance by Federal regulation of it. At the same time, it appears to me that both Mr. Kingsley and Mr. Davis are rather over-enthusiastic in their conception of the absoluteness of the supervisory authority over insurance that would be given to Congress by the proposed amendment. They rely too much, in my opinion, upon the numerous assertions by the Supreme Court about the plenary character of the power of Congress to regulate interstate and foreign commerce, and take too little into account the limitations which the Court has laid down with regard to the operation of this principle. The general scope of such limitations was clearly stated by the Court in Adair vs. United States (208 U. S., 161), where *inter alia* it was said: 'We need scarcely repeat what this Court has more than once said, that the power to regulate interstate commerce, great and paramount as that power is, cannot be exerted in violation of any fundamental right secured by other provisions of the Constitution." No more can it be exerted in violation of the reserved rights of the States, such as the police power and the power to tax, so long as those powers are uniformly and reasonably exercised by the States, without other than incidental effect upon interstate commerce. (See, for example, Smith vs. Alabama, 124 U. S., 481-482; Crutcher vs. Kentucky, 141 U. S., 61; Missouri, Kansas and Texas Ry. Co. vs. Haber, 169 U. S., 613; United States Express Company vs. Minnesota, 223 U. S. 335.) Now, would not the Supreme Court probably hold to be within the police power of a State a prohibition of the insurance of impaired or substandard lives? or a prohibition, such as Ohio now has, of the taking out of insurance against liability for accidents to employes, outside of the State workmen's compensation law, on the ground that such insurance makes for carelessness in guarding against accidents? or a requirement that reserves against life insurance contracts taken out by the State's citizens should be held and invested within the State, in order that the payments to beneficiaries might be prompt and sure? or a provision that fire insurance upon certain classes of buildings should not be permissible, on account of the encouragement of dangerous building? And again, would not the Supreme Court probably hold to be constitutional the taxation of the gross receipts of insurance companies operating within the State? or the taxation of the surrender value or unearned premium value of policies of insurance held by the citizens of a State? These are but a few of the questions that occur to the mind, when the analogy of the Supreme Court's decisions with regard to the powers left to the States, despite the plenary character of the Federal power to regulate interstate and foreign commerce, is followed out to the ultimate details. And be it said that the same principle holds of the Federal power over banking, the post, bankruptcies and all the categories of power enumerated in Section 8 of the Constitution.

And now a few words about the identification of insurance with commerce, though this is now a superfluous matter. Mr. Davis asks me where are to be found the traditions of the law and the judgments of mankind that have maintained a distinction between insurance and commerce. The traditions of the law are to be found in the common law of the Anglo-Saxon race, as far back as that law deals with questions of insurance; they are also to be found in the Code Napoléon and in the jurisprudence of the German peoples. Mr. Davis speaks of insurance as largely derived from the *lex mercatoria*, or law of merchants, which is a rather strange thing in view of the fact that the making of insurance contracts began only about a century and a half ago (except for some wholly obscure evidences of such contracts in ancient time); while the *lex mercatoria* of the Middle Ages had then long since been blended into the common law in Anglo-Saxon countries and into the codified law of the Latin and Germanic peoples, with the limited exception of its use in courts of arbitration or commercial courts attached to chambers of commerce in some countries of Continental Europe. It is a notable fact that insurance controversies are not and seem never to have been justiciable in

local commercial courts, except to a limited extent in respect of the value of goods destroyed by fire or of consequential losses, arising from the destruction of a merchant's goods by fire. All other insurance controversies have been and are justiciable only in admiralty courts. This seems to me much more important, as determining the accepted character of insurance, than the fact that France has for the sake of convenience (and after much discussion) placed the supervision of insurance within her Department of Commerce. If this rule of definition were followed, we should have to call meteorology agriculture, because the United States Weather Bureau is a part of the Department of Agriculture; and the maintenance of lighthouses commerce, because the United States Department of Commerce has charge of our lighthouses.

If Mr Davis, however, wishes to see clearly how the tradition of the law, which in the last resort is the judgment of mankind, places insurance in the framework of human activities, I should advise him to read one or two decisions of courts other than the Supreme Court of the United States. Let him read, for instance, the extremely illuminating decision of the Supreme Court of Texas in the case of Queen Insurance Company vs. State (24 S. W. Rep., 397), or the decision of the Viriginia Court of Appeals in the case of Harris et al. vs. Commonwealth (73 S. E. Rep., 561). There he will find that insurance is assimilated, not to commerce, but to the service of labor. And if he pursues his researches further, he will discover that there runs through the law a fundamental distinction between services, of one and another kind, and dealing in commodities, or commerce. He will find that banking, though inextricably interwoven with commerce, is, in the words of ex-Senator Edmunds describing the genesis of the Sherman Anti Trust Act, "not precisely that thing." Hence bankers can make agreements about the price of their services,—i. e. for collecting checks, etc.,—without being liable under the Sherman Law. He will find that brokers and commission men, whether for stocks or commodities, are not engaged in commerce when they are executing the orders of their customers (Supreme Court in New York ex rel. Hatch vs. Reardon, 204 U. S., 152; in Hopkins vs. United States, 171 U. S., 578; in Ware and Leland vs. Mobile County, Ala., 209 U. S., 405). These, too, may make hard-and-fast agreements as to the commissions they will charge for their services, without being guilty of restraint of trade or commerce. So, too, laborers, though working in the production of articles of commerce, are not themselves engaged in commerce; they may freely associate themselves in unions for the purpose of obtaining higher wages or otherwise bettering their condition, provided only they do not directly interfere with the movement of commerce. It is with these classes of persons and their services that the law has from the beginning associated insurance, and not with trade or commerce. For this reason the fire insurance companies have been able to associate themselves together with impunity to withdraw from Missouri and Kentucky, when those States enacted impossible legislation on the subject of fire insurance. The companies were not engaged in trade or commerce, but were providing a service; and the Sherman Act did not apply to them.

Such are a few of the arguments that appear to me pertinent, as against Mr Davis' contention that it is easy enough to make insurance commerce by calling it so. Insurance is no isolated thing, that may be treated by itself as we please. It has been given a place in the scheme of things by the best thought of men, just as labor has, or as banking has, or the services of brokers and commission men have. To wrench it from that place is to cast aside the wisdom of the fathers and to assume that we are, as modern individuals, capable of striking off new conceptions, hasty and immature definitions, superior to those which have been slowly evolved by the experience of the race. This, in my opinion, is one of the gross faults of our time.—Scrutator Rerum.]

HAS THE NEW YORK WORKMEN'S COMPENSATION LAW PROVIDED AGAINST THE CASE OF THE PAINTER WHO FELL FROM HIS LADDER?

ON April 22, 1911, when THE MARKET WORLD AND CHRONICLE was the only paper in the United States concerned with insurance and the only paper of any kind, except here and there one of a social-reforming turn, which was giving serious attention to the new theme of workmen's compensation, since grown of so great bulk, there was printed in these columns a brief account of the proceedings in an English county court, which painfully revealed the gross injustices which may arise from workmen's compensation laws, unless these are drafted with competent consideration of the infinite variety of complicated human relations that may be drawn into the mesh of them. The case was designated by this paper as that of "The Painter Who Fell from His Ladder"; and the moral intended to be conveyed by it was that society is full of poor men and poor women, little versed in the statute book, whose interest in their small savings and small homes it is of quite as much importance for the legislature to conserve as is the interest of workers injured in industry. To make such persons responsible for accidents befalling others of their class who may happen to have some temporary connection of employment with them is a mockery of justice, social or other.

Occasion has now arisen for reprinting the story of "The Painter Who Fell from His Ladder" and, as preliminary to describing the occasion, the story itself is here given. It runs as follows, according to the English court record:

The court was asked to make an award for 11s. 9d. per week in favor of a workman against his employer.

Applicant, a painter, said that he was working for the respondent in Maidstone, when he fell off a ladder and was impaled on some railings. His right thigh was severely injured and he was taken to the hospital. He had since been incapacitated for work. He had been working for respondent only three days when the accident occurred. His wages were 6½d. per hour, or 23s. 6d. per week. Previously to the accident he had worked for the defendant off and on for about ten years.

The employer said he could not dispute the facts, but it was a difficult case because he was in no better position in life than the applicant. He himself was only a laboring man, unable to get any permanent employment, and did any odd jobs in the town for any one who would employ him. The unfortunate thing was that he did not insure the applicant against accidents.

His Honor—Why didn't he insure? It was not expensive. It was difficult to know what to do in cases of this kind. Such cases led one to the conclusion that sooner or later employers of labor would be compelled to insure their workmen against accidents. As long as the rates of insurance were as moderate as they were there was no excuse for not insuring. This man (the respondent) would be ruined. There was no sympathy due to him because he could have insured for a few shillings.

The respondent stated that he did not insure because he rarely employed any one, as he did not have enough work. He also stated that he did not know that the act applied to a casual laborer, and that he was only casually employed, and his earnings would not average more than from 15s. to £1 per week.

His Honor—The rest of your life will be taken up in working

for this man (the applicant). This is one of the worst cases I have ever had before me.

His Honor ultimately made the award as asked in behalf of the workman.

And now for the occasion for reciting this case anew. On Monday of the present week the new Workmen's Compensation Commission of New York held its first public hearing for the making of compensation awards under the compensation law that went into effect on July 1. The New York "Evening Post," as well as other newspapers, described the proceedings at some length. And the "Evening Post's" account of the third case that came before the Commission is as follows:

"A knotty question was likewise presented by the third claim which came before the Commission. It had to do with the death of Robert Rhinewald, a house painter of this city, in business for himself, who fell from a scaffold which he had rigged himself, while he was executing a job for the owner of the property. The property-owner made the point that the man was not, strictly speaking, in his employ, and protested the claim for damages, which was pushed by the labor union to which Rhinewald belonged. This is a case which will probably serve as a precedent. It will receive careful consideration."

Assurances had reached this paper that, in the framing of the New York statute, the case of "The Painter Who Fell from His Ladder" had been borne in mind, and that the definitions of "employer," "employe" and "employment" had been so drawn that nothing of the kind could happen under the Act. But why, then, did the Commission take the case of Rhinewald as a "knotty" one, which would "probably serve as a precedent"? Can it be possible that, after all, the humble owners of small homes in New York, who get neighboring day-workers to do a little job of painting or roofing, are liable, in case of serious accident to the day-worker, to lose their homes in order to make compensation payments, or, in the words of the English judge to spend "the rest of their lives working" for the victim of the accident? Of course, as the judge said, such people "might insure; it is not expensive." But what do lone widows and untrained workers, perhaps already far gone in years, know about insurance?

THE PROGRESS AND SCOPE OF GROUP LIFE INSURANCE

IN his annual report to the Governor, covering the operations of insurance companies in his State during 1913, Mr. Burton H. Mansfield, Insurance Commissioner of Connecticut, devotes considerable space to a discussion of the progress and proper scope of group life insurance. His comment on this subject is given in full below:

* * *

Life insurance in groups presents practically a new subject. That two or three so called "group policies" were issued many years ago, covering the lives of coolies in order to indemnify shippers transporting those coolies over the high seas, does not take away from our conception of group insurance, its unique chacacteristics.

Since the insurance investigation of 1905, in New York, the work of the life insurance world has been largely constructive. The uses to which life insurance can be adapted have multiplied rapidly. While life insurance has its natural inception in the individual, such units are ultimately assembled in groups, and so considered. It seems to me, therefore, no great step to consider the group as the unit, upon which to predicate the terms of a contract of life insurance, though the group itself is made up of individuals; and this step has been actually taken by experienced underwriters and put into operation.

In our day of progress we cannot assume static conditions in the insurance field, any more than we can assume such a state of affairs in our large mercantile industries. The real existing conditions are dynamic, not static. The changes in economic methods of concentration of wealth, the modern methods of manufacture, the development of the economic and social freedom of the people, have brought to the attention of the public recently, a large number of proposals for new legislation, almost all of which, directly or indirectly, called for better social conditions. Substantially all such constructive social legislation has a direct moral purport, which must be given due weight in any analytical consideration of insurance problems and in the extension of present insurance methods to meet the changing conditions.

The specific economic transaction before us for consideration is the sale of a commodity now known as group life insurance, as contrasted with individual life insurance. The two parties to this transaction are the employer who desires to buy life insurance for his employes, collectively, and the corporation which desires to sell it, or, briefly, the "employer" and the "company."

The employer applying for a group policy desires an estimate of the cost. Such an estimate can only be made after certain data have been furnished to the company. The first step is to make a preliminary inspection of the employer's plant and his employes. Ths inspection calls for information as to the number of employes, whether male or female, their average ages, general health, location and description of the establishment, its sanitary construction and up-keep, and other information which will accurately describe the environment of the employes while at work.

If the employes appear to respond to a high type of service requirement, and it appears to the company that the entire group can be insured during their period of employment without medical examination, a census slip is prepared and signed by each employe, giving his or her name, place and date of birth, sex, salary, date of employment, and exact duties. These census slips are tabulated according to ages and the cost of insuring the lives at each age for an amount equivalent to one year's salary is calculated, using the yearly renewable monthly term rate as the basis for such calculation. The aggregate group premium is then ascertained for the employer. This premium, though actually arrived at in each case, is naturally considered by the employer in terms of his pay roll. In this connection I find the following statement made by an insurance company writing this class of business: "Exact premium cost for first year in the aggregate, on any group, will be quoted from the home office when proper census is supplied. Without such census a rough estimate of one and one-half (1½) per cent of the amount of insurance to be covered will be found to approximate the maximum first annual cost in most groups, reducible thereafter by annual dividends." While the facts thus stated may be true, great care must be exercised in the use of such information, for the premium cost can only be ascertained after proper data have been furnished to the company. Even after a risk is written, the premium cost varies from month to month because of the varying amount of insurance covered by the risk. Group insurance for the present at least should only be written in a specialized department, and by special representatives who by their training and experience thoroughly understand the nature of the problem presented.

If the estimate of the expense is acceptable to the employer each employe signs a special application for insurance in the group, and an Employes' Group Policy is issued. This contract,

in consideration of the payment of monthly premiums on the basis of tables of premiums and risks printed in the policy, insures during the term of one year the lives of such employes of the employer as are enumerated in a schedule attached to the policy and for the amount set opposite their respective names.

Briefly, then, these are the mechanical operations necessary in assuming risks under group insurance policies. What principles of life insurance underwriting should be especially considered in this connection?

It appears to me that all so-called individual insurance is in a sense group insurance. The entire structure of life insurance is based upon the law of average. Insurance of an individual can be accomplished only when he is considered as a member of a group, when he is associated with others, upon whom the usual law of average operates. Why, then, can we not change our unit of measurement from the individual to the group of individuals and expect in time to apply the law of average to a number of groups in order to give proper weight to the group as a necessary element in the science of life insurance?

If we admit that the group may be used as an insurance unit, it follows that the group must be examined as such. In other words, the company passes from a medically selected life to a selected and inspected group. If the group is of sufficient size and the occupation and environment favorable, the medical examination is waived. This, it is stated, is a necessary concession because the plan of group insurance must comprehend all members of a given group so as to eliminate any personal selection against the group. Once the group is established on an insurance basis, however, each new employe added to it is subject to a medical examination in order to prevent personal selection against the group with which he is to be associated.

The premium rate charged, as already stated, is usually a yearly renewable term rate, payable monthly. It must be borne in mind that this rate is applied according to the age of the employe and the amount of salary received by him. The employer is interested in the aggregate cost and is not concerned with the specific cost of insurance of any individual in the group. The aggregate premium for any group may, or may not, increase each year as the term-rate increases. The total number of employes changes rapidly from time to time. When a clerk who has been connected with a bank or an insurance company, for many years, for instance, resigns his position, promotions are usually made to fill the vacancies and a younger clerk is hired to make up the necessary quota. Hence in place of a life, say at age sixty, drawing a salary of three thousand dollars a year, a life aged twenty may be added at an annual salary of six hundred dollars. The difference of these salaries may be only partly used to increase the salary of the clerks promoted because of the changes. The effects of changes of this kind in a large establishment can be determined only by experience. It may be safely said that such changes will reduce the average age of the employes in nearly every case. This aggregate cost is determined by two factors, namely, first, by the rate per $1,000 of insurance at the attained ages of the employes, which rate increases more rapidly at the higher age, and, secondly, by the amounts of salaries paid at each age. Again it must be borne in mind, however, that numerous calculations involving these two factors enter into the cost, which cannot be reduced at present to any rule of thumb for the use of agents or for any other purpose.

In connection with the cost of production, it should be remembered, that the waste due to lapse, which is so marked in the case of individual insurance will probably be less noticeable in the case of group insurance. The group persists, although changes are made in the employes. It is unlikely that the groups will increase in size. It is evident, too, that the management expenses incurred in connection with this class of insurance, are not to be measured by the corresponding expenses incurred in handling individual insurance. Agents' commissions are materially reduced, the rate allowed probably being from one-third to one-half of the usual rate, a situation which cannot be reasonably objected to by the agent, as he may cover several hundred persons at a time, and in no case should he cover less than one hundred.

Once the risk is assumed a single policy is written and all premiums thereon are paid by or through the employer. This practically eliminates the cost of individual policies, cost of collection, postage, premium notices, and numerous charges for clerical work, while medical and inspection costs are materially reduced. The accounting system most easily adapted to this class of insurance is one used by the large fraternal societies, namely, a system which automatically takes care of the additional and terminated risks. The books of the company should show, to use the terms of liability insurance accounting, the additional premiums and the rebates of premiums which are subject to further adjustments. It seems plain, therefore, that through the combination of risks the expense of writing and caring for the group is but a fraction of the expense which would be incurred in caring for the insurance of the members of the group individually.

Will the death rate among the lives insured under group policies be higher than the rate experienced among individually medically selected lives? I do not know. One of the companies writing group insurance upon the non-participating basis has incorporated in its policy a saving clause providing for a revision of the rates at the end of five years, based upon actual experience. I presume the death rate may be somewhat above the normal rate, but the group if properly inspected is in a sense a selected risk, and probably will not deteriorate materially owing to the fact that all subsequent entrants are subject to medical examination. It seems reasonable to suppose, however, that any increase in mortality will be offset by the saving in expenses. It is important to note in this connection that in any final analysis of this question no profit from excess interest earnings should be taken into consideration unless the basic rate is other than the yearly renewable term rate. While this profit is probably one of the most important factors in determining returns upon life insurance policies generally, it is practically negligible in the present case, as the reserve runs off each year and does not accumulate as in the case of ordinary life insurance.

Mr. H. Pierson Hammond, actuary of the Connecticut Insurance Department, recently inspected an establishment for the purpose of considering a concrete example of group insurance. The employes of this establishment I have used as a unit for illustration. The rates upon which the cost for group insurance is predicated are those which have already been used similarly in practice. The amount of insurance in each case is one year's salary. The number of employes considered are 784, of which 344 are male and 440 female. The total annual pay roll is $811,000. The average ages of these groups are about 38 and 28, respectively. The health of the employes, except in a few cases, appeared to be exceptionally good, no unusual amount of sickness having been reported among them. The offices are light and well ventilated, the building comparatively new, and the environment generally excellent. In the tabulated census returns, I was struck with the distribution of the ages of the male employes as contrasted with the female employes. This was explained by the fact that the employer had added very few male clerks recently, but had taken in more than the usual number of female clerks. This tendency was particularly

emphasized by the fact that a number of young ladies had been added temporarily to the force to handle special work and some of these had been retained permanently by the employer. I have, therefore, presented the following results so as to show the information which was ascertained, in three groups, namely, male employes, female employes, and the total group:

	Male Employes.	Female Employes.	Total Group.
Number of employes	344	440	784
Average age, years	38.4	28.5	32.8
Yearly salaries	$560,800.00	$250,920.00	$811,720.00
Aggregate monthly cost	1,018.89	278.06	1,296.92
Aggregate annual cost	12,226.68	3,336.72	15,563.04
Annual cost as a percentage of the pay roll	2.2%	1.3%	1.9%

The above figures are based upon the facts as presented by the employer. A few of the male clerks who have been employed some time are above the average age of the group and are drawing salaries in excess of $2,500 per annum. This of course tends to raise the cost of that particular group which was selected.

The cost in the above example is based upon a participating rate. To show the results upon the non-participating basis, Mr. Hammond has also calculated the aggregate cost based upon the American three per cent yearly renewable term rates loaded twelve and one-half per cent for commissions and expenses as follows:

Male employes, aggregate annual cost $9,344.06, namely, 1 7-10 per cent of the payroll.

Female employes, aggregate annual cost $2,555.09, namely, 1 per cent of the payroll.

Total groups aggregate annual cost, $11,899.15, namely, 1 5-10 per cent of the payroll.

You will notice that I have not referred to the recipients of the benefits, the manner of paying the premiums, or the question of whether there be a demand for this kind of insurance. As for the beneficiaries, they are enumerated in the applications, which are made a part of the policy contract, and may be the wife, children, sister, etc., as in an ordinary policy. The premiums are paid either by the employer or by him and the employe together.

As for the demand, there is perhaps nothing to show that it is spontaneous or born of necessity, rather than nurtured by the insurance companies. It does exist, however, and by whatever cause produced, it should be respectfully received and considered.

Life insurance in groups is a progressive step, in consonance with acts regulating workmen's compensation in case of accident, sickness and death; or with old age pensions and the like, all striving for the better protection of those who are employed in mechanical business or other pursuits. Any plan for its development cannot be perfect at the start. Many obstructions, real or imaginary, may block its progress, but they are only of a temporary nature and it seems to me that we should welcome such a measure and join with both employer and employed, with both the insurer and the insured, in all reasonable efforts for its promotion.

The foregoing remarks on Group Insurance are taken from a paper read by me at the National Convention of Insurance Commissioners in 1912. I was indebted to Mr. Hammond, the department's actuary, for much valuable assistance, in their preparation. Without his help in the matter I could have done but little.

Since that paper was written I have seen little reason for changing my views. Much has been written on the subject and I am well aware that some objections to the plan have been seriously urged and are entitled to careful consideration. Among these are the following:

1. The absence of medical examinations. The laws of some States require that a medical examination be made of each applicant for life insurance. It is customary of course to make such examination in individual cases and the law is undoubtedly based on such custom. But the law can readily be amended to fit new conditions, and even if it remains, its existence does not operate as an objection to the plan or to the merits of group insurance. The laws were made without reference to group insurance and before it was inaugurated to any extent, or under existing conditions. The same necessity for it does not exist in the case of group insurance, properly applied, as in the case of individual insurance. Other precautions and safeguards, some of which I have already enumerated, operate in the selection of these risks and seem to be a good and sufficient substitute for the prescribed medical examinations. The nature of the occupation, the size of the group, the responsibility of the employer, the location of the establishment, its sanitary condition and the manner of its construction, all enter into the problem and determine to a large degree its solution. Moreover, wherever the laws require an examination there is nothing to prevent its being made.

2. Again it is urged that the anti-discrimination laws of some of the States prevent the issuing of group insurance policies. I do not think that any very serious objections can be urged on this ground. The basic rates are especially prepared for this purpose and should not be offered for use in connection with individual policies and being prepared for this particular purpose are applied without distinction between those who belong to the class covered by the group policy, and to them only.

3. The fraternal societies object to group insurance because by it the companies engaged in it seek, as they claim, to take over whole lodges or societies. Assuming such to be the case, there is absolutely no justification for it. The fraternal societies are altogether too important to the communities in which their operations are conducted to be harassed in any such way. Every effort by any old line company or its agents to take over any society or lodge, by this method of insurance, cannot be too emphatically condemned, and where such methods are practiced, assuming that they are, they should be unconditionally forbidden. Group insurance should be confined to the employer and employes, as such, and when so confined, it seems to me that the fraternal societies have no reasonable ground for complaint. Group insurance should not be taken by the employe as a substitute for his individual insurance, but in addition thereto, and I think it would be well for the employer to consider whether the cost thereof should not be paid entirely by himself.

It may be interesting to note some of the transactions of the life insurance companies of Connecticut, which issue policies of group insurance, so far as they relate thereto. On December 31st, 1913, three of these companies had issued twenty-eight such policies, covering twelve thousand two hundred and forty-four lives, and the amount of insurance issued was nine million two hundred and fifty-seven thousand dollars, written in one year renewable term policies, as a rule.

Southern Casualty and Surety Conference Officers.—The Southern Casualty and Surety Conference, in annual meeting in Chattanooga, Tenn., elected officers as follows for the ensuing year: President, A. B. Landley, Columbia Life, Columbia, S. C.; vice-president, P. M. Estes, Life and Casualty Company, Nashville; secretary, and treasurer, Edwin Shelby, New Orleans Casualty, New Orleans. Executive Committee: Chairman, C. E. Clarke, Peninsular Casualty, Jacksonville, Fla.; C. J. Goodman, United Casualty and Surety, Memphis; O. P. Orr, Southern Mutual Life, Birmingham, Ala.; H. D. Huffaker, Interstate Life and Casualty, Chattanooga, Tenn.; J. J. Watson, American Bonding, Galveston.

NOTES ON INSURANCE, AMERICAN AND FOREIGN

New York Report on Life Insurance.—An abstract of Part II of the annual report of the New York State Insurance Department, covering the business of life companies admitted to the State, in 1913, shows that at the close of business for the year, the life companies were possessed of $4,417,298,211 of admitted assets; an increase of $243,344,632 over 1912. The liabilities, excluding gross surplus and special funds of $256,936,224, were $4,160,361,987; an increase of $218,183,806 over the previous year. The total income was $840,297,443; an increase of $45,015,382. The amount of premiums received was $628,650,211, or $31,448,001 more than in 1912. The companies disbursed in 1913 $595,998,241, being $28,480,537 more than in 1912; of that amount $439,958,335 was paid to policyholders, while the cost of management (including shareholders' dividends) was $156,039,906.

There were 1,015,067 "ordinary" policies issued and paid for during 1913, with insurance of $1,856,464,981. Compared with 1912, there was an increase of 117,040 in the number of policies written, and the amount of insurance increased $140,193,871. There were 53,091 more policies terminated in 1913 than in 1912, and $97,782,503 more insurance. The total number of "ordinary" policies in force, on December 31, 1913, was 7,452,154, insuring $14,304,638,791; a net increase of 450,241 policies, and of $777,317,569 in insurance. The amount of "industrial" insurance in force was $3,656,603,109, being an increase of $223,835,640; making a total increase, for both classes of business, of $1,001,153,209.

The business in force in the State of New York at the end of 1913, and transacted therein during that year, by all life insurance companies of this and other States, including both "ordinary" and "industrial" insurance, was as follows: Policies in force, 6,785,525, insuring $3,066,665,398; policies issued, 1,068,722, insuring $442,516,747; an increase, in insurance in force, of $163,190,890, and, in insurance written and paid for in 1913, of $19,151,343.

The following comparative figures show the sources and amounts of increases and decreases, in the unassigned funds (surplus), of the companies for 1912 and 1913:

	1912.	1913.
Gain from loading	$21,786,996	$17,144,675
Gain from mortality	38,043,035	46,887,395
Gain from surrendered and lapsed policies	13,684,565	13,497,365
Gain from interest and rents, less amount required to maintain reserve	62,444,927	68,183,546
Gain from annuities	*503,864	93,013
Loss from investments	5,897,800	12,613,730
Loss from dividends to policyholders, including net increase or decrease in dividend funds apportioned and unapportioned	102,596,996	99,177,123
Loss from miscellaneous sources	22,888,392	19,425,743
Total gain	4,072,531	14,589,398
Loss.		

The total receipts of the Department for the fiscal year ended September 30, 1913, were $782,894.16; the total expenditures were $386,581.92, an excess of receipts over expenditures, covered into the State Treasury, of $396,312.24.

The par value of the securities, held on deposit by the Department on December 31, 1913, belonging to the various insurance companies required by law to make such deposits, was $39,291,550.

"It will be seen," says a Department statement, "that whatever the general business conditions of the country may have been during 1913, the business of life insurance, as reflected by the returns of the companies reporting to this Department, fully held its own. The increase in the amount of insurance written during the year compared most favorably with that of previous years and the amount of business lapsed, surrendered and decreased, taking into consideration the volume of insurance, compared with other recent years, shows the increasing persistency and stability of the business as a whole; this feature being in strong contrast to the conditions obtaining prior to the enactment of the legislation affecting life insurance in 1906. The steady and comparatively uniform growth of this great business from year to year, the lowering of acquisition and other expenses and the increasing returns of so-called dividends made to policyholders, indicate the employment of those healthy and conservative methods in management which must strongly appeal to all supervising officials and others interested in the well-being of life insurance.

"There is one other matter to which it may be well to call attention, and that is the increased amount of policy loans, due, no doubt, in large measure, to unsatisfactory business conditions. It is to be hoped that with better times ahead the situation in this respect will show material betterment. While these loans are good investments for the companies, they are to be deplored from an economic standpoint, as a very large majority of them are never repaid; in such cases reducing the amount to be paid to the beneficiary, who is, in many instances, dependent upon the returns from a life insurance policy."

* * *

Compensation Commission Makes Brave Start.—The New York State Workmen's Compensation Commission resolved itself into a court for the determining of awards under the workmen's compensation law for the first time on Monday of this week. Out of 11,000 claims reported filed up to that time, two were disposed of during the day. At the same time, stock insurance companies, writing workmen's compensation insurance in the State, received a demand that each deposit $10,000 immediately with the Commission, to be dispensed at its discretion in the settlement of claims against the individual companies. As there are thirty-two stock companes writing this class of business in the State, the tidy sum of $320,000 will be available should the companies accede to the demand.

* * *

Insurance Law and Logic in Ohio.—The Ohio Insurance Department has ruled that it is not legal for a group of employers in the same line of business to form mutual insurance associations for the purpose of carrying their own workmen's compensation insurance. After pointing out the provision in the workmen's compensation law which appears to permit employers or groups of employers who maintain benefit funds to pay compensation and medical aid out of such funds, Superintendent Small says:

"While the act providing for workmen's compensation recognizes mutual associations organized by two or more employers, and makes them exceptions to the general rule when meeting certain requirements and qualifications, I fail to find wherein the general insurance laws of the State of Ohio provide for the organization of such associations. The proposition that the industrial board is to meet and consider is the mutual association that makes application thereto for permission to qualify as above act provides. Before an association can make such application, it must be duly organized, and that organization must be in accordance with some law or statute of the State."

After quoting section 665 of the code, Mr. Small continues:

"I construe it that no company, corporation or association will be permitted to engage, either directly or indirectly, in this State, in the business of insurance, or enter into any contracts substantially amounting to insurance, or in any manner aid therein, unless there are laws specifically enacted and expressly authorizing such insurance. That is, insurance companies and associations of the State of Ohio are creatures of the State, and unless specifically

provided, cannot exist in this State. We can only construe that part of the workmen's compensation act accepting mutual associations formed by two or more employers in the light of anticipated legislation providing for the organization of such mutual associations.

"The general insurance laws of Ohio provide for the organization of several kinds of mutual associations, but nowhere do I find any provision relative to the organization of mutual associations by employers to transact the business of liability insurance or workmen's compensation insurance."

* * *

Insurance Society Committees.—President Charles J. Holman, of the Insurance Society of New York, has appointed the following committees: Finance, Henry W. Lowe, James Marshall, Alfred M. Best; Adjustment of Losses and Lectures, Allen E. Clough, chairman; William N. Bament, Everard B. Hopwood; Accountancy Meetings, B. H. Eckhardt, chairman; T. D. Richardson, C. F. Voorhis; Auditor, J. C. Maneely.

INSURANCE NEWS IN THE WEST

Files Answer on Underwriters' Agencies.—Rufus M. Potts, Insurance Superintendent of Illinois, on Monday filed his answer to the complaint of the companies operating underwriters' agencies in which they sought from the Federal District Court an injunction to restrain him from interfering with their business. In general it may be said that he denies those statements in the bill of the companies by which they seek to set up that the court has jurisdiction in the premises. Having made answer to the specific averments of the plaintiffs he repeats in substance the findings that he published after his hearing in June with intent thereby to show that the companies are operating "underwriters" in violation of law and are not entitled to the relief sought. This answer brings the question before the court for determination and the hearing of the case will begin on Monday of next week, unless it is postponed. The fact that the companies' case is being handled by the general counsel of the National Board and his assistants has resulted in a formal protest to that body from certain of its members that do not operate "underwriters." It has not yet been learned what effect, if any, this protest has had.

* * *

Phœnix of London to Be More Active in West.—Much interest is manifested in the visit of Hart Darlington, assistant United States manager of the Phoenix of London, to Chicago. The fact that an assistant Western manager is to be appointed to take the place of R. E. Lidster, who was promoted to the managership, has brought out all those aspirants to managerial honors who are accustomed to come to the front on such occasions. Mr. Darlington has taken up a number of details that usually would be handled by the Western manager and this has caused some comment. It is very reasonable that he should do this, however, as he comes directly from the New York office, entirely familiar with the changes that have been decided upon. Furthermore, Mr. Darlington has perhaps a better knowledge of the men of the West than has Mr. Lidster, for Mr. Darlington was a Western field man for years, while Mr. Lidster grew up in the business in the office and of late years his duties have confined him pretty closely to his desk. It is the intention of the management to make the Phoenix more of a factor than it has been in the past. It has done a very fair business, but it has not been as prominent in the activities of the business as its standing as a company entitles it to be. Its representatives in the West usually have not taken a very active part in the work of the Western Union or of the various field and other organizations. Consequently it stood in the background, like several other excellent British companies. It has been the subject of comment that a company so powerful and prominent at home should not be more in the public view in this country. When present plans have been carried out, such comments will not be called for, although Mr. Darlington states that it is not the company's intention to try to make any startling increase in its business or otherwise seek to get under the spotlight.

* * *

Right Man Hard to Find.—The joint conference committee of the Western Union and the Western Insurance Bureau appears to be taking its time in the selection of a special agent. Some time ago it was understood that it had conducted an elimination among the various candidates for the position and that a few were under active consideration, but so far no appointment has been announced. The truth is that the committee has a large contract on hand to find a man who will fill the bill and will take the position. Many would gladly take it, for it is stated that the salary will be $6,000, instead of $3,600, as had been reported, but most of those who want it do not meet the requirements. Doubtless there are several men admirably fitted for the position, but most of them do not want it. One manager has intimated that it will be the hardest job in Chicago to hold. As he put it, the special agent will have eighteen bosses and about 200 sub-bosses, and it will be difficult to satisfy all of them. His duties will be such that he ought to be a diplomat, a thorough insurance man, a speaker, a writer, a lawyer, a master of rating and have endurance enough to stand the displeasure of managers, field men, raters and others, whose path he will be bound to cross at times.

* * *

Post for L. S. MacEnaney.—L. S. MacEnaney, who recently resigned as managing underwriter of the Merchants National Fire of Chicago, which is in process of promotion, has been appointed managing underwriter of the Columbian of Indianapolis and assumed his duties this week. The Columbian is a going concern, although its capital is not all paid up. It intends for the present to operate only in Indiana and four or five adjacent States. Its officers have stated that they do not expect dividends for several years, but want to build up a strong organization and place the company on a thoroughly sound financial basis before dividends are considered. Mr. MacEnaney's experience has been mainly in the Illinois field, although at one time he handled Indiana as general agent of the Dixie Fire. He is a hard worker and intends to do considerable field work himself for a time, holding down operating expenses as much as possible consistently with making fair progress.

* * *

Mr. Ekern Fights for State Insurance.—Insurance Commissioner Ekern, of Wisconsin, is campaigning in favor of the proposed amendments to the State Constitution which would enable the State to engage in any line of insurance. Incidentally, the Legislature, if it saw fit, could pledge the credit of the State to back up its policies, for either of the almost identical amendments removes the constitutional restrictions. Last week Mr. Ekern spoke at the annual meeting of the State Federation of Labor and made the most of his opportunity by charging the insurance companies with extravagance, pointing out the advantages of State insurance and endeavoring to array his hearers against the companies by charging that the latter are opposing the initiative and referendum amendments, as well as those permitting State insurance. He said that by opposing the amendments the insurance interests were endeavoring to prevent the people from establishing the best system

of insurance and to compel them to pay tribute to the companies.

* * *

Dragging Michigan Compensation Law Into Politics.—Reports from Michigan are to the effect that the politicians and statesmen who are now seeking nomination for various offices are beginning to drag the workmen's compensation law into politics. The Michigan law has probably given more general satisfaction than that of any other State. Both employers and employes have testified to its good results. It probably is capable of improvement, but when the politicians commence to tell the workingmen the various things they will try to do to the law to make it more favorable to the employes, they apparently are laying a foundation for a fight that will not be to the benefit of the law as a whole. One prominent public man who seeks a high office is reported to have expressed favor for an amendment that would require the Attorney General or county attorneys to prosecute any employer or insurance company who disputed the claim of a workman.

* * *

The One-Eyed Man Under Compensation.—Special Counsel Henry E. Sampson, of the Iowa Attorney General's office, who acts as legal adviser to the State Industrial Commissioner, has written an opinion on "the loss of an eye by a one-eyed man" which will create interest and discussion, whether it be followed or not. The Iowa law provides for 100 weeks' compensation for loss of an eye and 400 weeks' compensation for the permanent total disability resulting from the loss of both eyes. The practice in several States having somewhat similar laws is to treat the loss of the only sound eye an employe had as constituting total permanent disability and entitling him to the same compensation as the loss of both eyes. Mr. Sampson does not believe this practice should be followed in Iowa, as he does not believe that was the intention of the Legislature. He admits that the loss of the second eye is more serious than the loss of the first, and the compensation should therefore be more than for 100 weeks. He does not believe the loss of one eye can be considered the equivalent of the loss of two, and therefore compensation should not be given for 400 weeks. The compensation then should be between the two limits, and Mr. Sampson holds that it should more nearly approach the 100-week limit than the 400 week, unless the circumstances are unusual. He advises the Industrial Commissioner that such cases should be treated like others involving permanently disabling injuries for which specific periods of compensation are not named in the law.

Chicago, July 24, 1914. LA SALLE.

ITEMS OF INSURANCE NEWS.

A press despatch from Topeka says that Kansas is planning a fight to prevent the fire insurance companies from making higher rates on mercantile and dwelling house risks than those which prevailed before Charles Barnes made his reduction orders in 1909 and 1910. Ike S. Lewis, State Superintendent of Insurance, has asked the mayors of the first, second and third class cities in Kansas to give exact information as to the fire and tornado losses during the last ten years, and also the amount of insurance paid thereon. If the Supreme Court finally rules that the old Barnes' orders are void, because the companies were not given due notice, the State will then be ready to issue a new reduction order at once. The fire insurance companies would then have to prove that this order is unreasonable.

The Louisiana Casualty and Surety Association of Information and Publicity has been organized with headquarters in New Orleans. The officers are: President, Henry Rightor; vice-president, Edwin Shelby; secretary and treasurer, J. H. Bodenheimer; executive committee, Henry Rightor, Edwin Shelby, J. H. Bodenheimer, M. J. Hartson and W. J. Bovard. The following vice-presidents were elected to represent different important sections of the State: Shreveport, Howard Prescott; Lake Charles, John L. Wasey; Alexandria, J. Wallace Alexander; Monroe, Walter Smith; Baton Rouge, J. H. Percy.

The question has been submitted to the New York Insurance Department whether firms which agree to cancel, in case of the death of the purchaser, all payments still due on articles sold on the installment plan, are acting in violation of the insurance law. The case cited was that of a New Jersey real estate corporation which is selling peach orchards on the installment plan under a contract by which the purchase is completed and all unpaid installments become automatically paid up on the purchaser's death. Counsel for the department held that such a contract is not in violation of the insurance law.

President Wade Fetzer, of the National Association of Casualty and Surety Agents has apopointed the following committee to attend the nineteenth annual convention of the National Association of Insurance Agents at Minneapolis, August 17: John A. Morrison, secretary-treasurer, Chicago, chairman; N. E. Turgeon, first vice-president, Buffalo; V-L. P. Schriver, second vice-president, Pittsburgh, and F. B. Owen, Cleveland, director.

The New York Court of Appeals has handed down a decision sustaining the conviction of Charles N. Pinkney and the C. N. Pinkney Company for illegally writing insurance as agents in non-admitted insurance companies. Pinkney was convicted in the Court of Special Sessions on a charge of having placed with two English companies, not admitted to do business in this State, fire insurance on property located in Philadelphia.

The Union Central Life maintains, in its home office, an emergency hospital, where an average of forty patients a month are treated. The hospital is equipped with two beds, a cot and a complete supply of medicines and instruments, and is in charge of a trained nurse and a physician who are on duty continually during the day. The service is free to the company's employes.

The Casualty Company of America has secured a controlling interest in the stock of the holding company which owns the building, No. 68 William Street, situated at the northeast corner of William and Cedar Streets, New York City. It is understood that the Casualty Company will occupy it as a home office when its lease on its present quarters expires.

The Casualty Underwriters' Association of California at its annual meeting elected as president, A. L. Johnston, of San Francisco, who is assistant secretary of the Royal Indemnity at that city. D. E. Kessler, of the Employers' Liability, was re-elected vice-president, and W. A. Chowen, of the Frankfort General, was re-elected secretary-treasurer.

The entire board of directors of the Florida Fire and Casualty Company of Jacksonville, thirteen in number, has resigned at the instance of State Treasurer J. C. Luning, who, with Attorney General Thomas F. West and Comptroller W. V. Knott, composing the Florida Insurance Commission, had found the capital stock of the company to be impaired.

A Connecticut court has held that "the equitable definition of the word accident includes inevitable casualties, such as are created by the act of God, and those which arise from unforeseen occurrences, misfortunes, losses and acts or omissions of other persons, without fault or negligence on the part of the person injured."

Organization has been perfected of the Jacksonville (Fla.) Association of Life Underwriters with the following officers: President, R. Peter Jones, manager, Metropolitan Life Insurance Company; vice-president, Tracy L. Acosta, manager, Penn Mutual Life; secretary-treasurer, Willard L. Lusk, manager, Union Central Life.

The United Life and Accident of Concord, N. H., has been examined and approved by the Insurance Department of its home State and received its license. The authorized capital of the company is $500,000, one-half of which has been subscribed and paid for at the rate of $50 a share, or twice its par value.

The Farmers National Life, the first life insurance company to be organized under the new New York laws, has been organized at Syracuse with a capital of $200,000 and $100,000 surplus, and has received its license from the State Insurance Department.

Frederick L. Hoffman, statistician of the Prudential Insurance Company, was recently elected an associate member of the American Medical Association, and also an associate member of the American Academy of Medicine.

The stockholders of the Illinois Surety Company have approved the recommendation of the directors reducing the capital stock from $500,000 to $250,000, adding the difference to surplus.

The First National Life of Tacoma has absorbed the American Life and Accident of Portland. The First National has been writing life only, the Portland company accident and health.

The Home Insurance Company of New York has presented a gold medal to A. M. Burtis, its secretary, in commemoration of his fifty years' service with the company.

The Chamber of Commerce of Liverpool, Eng., has started a movement to make the insurance of steerage passengers on ocean lines compulsory.

Members of the class of 1914 of Williams College have insured their lives in the Massachusetts Life in favor of the college endowment fund.

Almet R. Latson, of the firm of Latson, Tamblyn & Pickard, has been appointed counsel for the Fire Brokers' Association of New York.

REVIEW OF THE FINANCIAL SITUATION

AGAIN it is necessary to remind ourselves that no matter how much desire there may be for a return of confidence and a restoration of prosperous activities in the United States, the domestic future is very much dependent on foreign developments. In the rapid series of events at home in the last three weeks, which have been full of important or sensational occurrences bearing on values, there has been a disposition to overlook affairs abroad. Nevertheless, despite the various reasons peculiar to the country which have contributed to business depression and have operated against processes of recovery, it has become more clearly apparent with the progress of the Summer that it is still a world-wide situation with which we have to reckon.

In some lands more than in others the features of economic reaction are accentuated by the greater severity of decline in values, extent of liquidation and prostration of trade and industry, but in all lands there is a common characteristic of depression. The conclusion is more than ever irresistibly forced on the observer that the world is passing through one of the great periodic cycles of economic change which have always terminated an era of such tremendous and extravagant expansion as prevailed during the first decade of the new century. The causes which precipitated readjustment originated in those countries where expansion had been most unsound, but there is an international reciprocity nowadays, which has aggravated tendencies toward depression among all nations. These tendencies have also, as in our own case, been accelerated by domestic influences which have helped to impair confidence.

It does not follow that the slow approach of confidence to a return and the slow inauguration of processes of financial and business recovery must occur simultaneously in all countries, or even in what are called the leading commercial nations. Nothing is more likely, indeed, than that recovery will begin in the United States long before it starts elsewhere. But it must be realized that the possibility of recovery is likely to be interfered with if over any very wide area the present unsettlement should be aggravated and the prevailing depression should be intensified. For that reason it is of rather disturbing significance that the European situation has in the last week again begun to force itself on the attention of American finance through a renewal of heavy liquidation of American securities and through a sharp recovery in foreign exchange which had its prompt consequence in the further engagement of gold for export to Paris. These were the outward and persuasive signs of persistent foreign strain which did not lack explanation in the recent European despatches.

France continues to be the centre of strain abroad. The alienation of the French investor from the Paris market has been kept up against all solicitation, official and otherwise, and betrays an unchanged distrust of the socialistic radicalism of the Government as well as distrust of the promoting bankers who have filled France with an unwholesome mass of dubious securities in the last few years. The London market reflects this and other distressing forces and everywhere abroad financial markets have been weakening anew under the long unrelieved pressure of undigested securities and the evidence of public timidity furnished in a lack of support to quoted values. Of late weeks increasing trade reaction has added itself to the adversities of the financial centres, and while there is a superficial abundance of funds in the money market, the symptoms of underlying strain in the banking and business communities are unmistakably seen in a hardening trend of discount rates.

Whether or not the conditions already noted are chiefly responsible for the disquieting financial positions at various points or whether political fears on domestic and international account are the prime cause may be debated, although the indications are that the severity of tension is owing more to war clouds than to anything else; but strain is clearly shown in the unremitting efforts of central banking institutions to build up gold reserves. Europe apparently still recognizes an inadequacy in the reserve basis of credits and there was warning in Sir Felix Schuster's repetition in the past week of his previous exhortations to English bankers to increase their gold holdings. The pyramid of European credits and capitalization needs a broader foundation than it yet has, to withstand the economic and political hurricanes that so frequently sweep through the financial air. Meanwhile the uneasiness of Europe because of economic weakness in Canada, Brazil and Argentine and other newer countries in which European money is heavily invested, has not been diminished by the scandals of corporate finance and of political destructiveness which we are exploiting in the United States.

There are astute observers who think that Europe is in danger of a worse war than that which broke out in the Balkans a little less than two years ago. They regard it as significant that taking European finance as a whole the markets have so long refused to brace up, and they see in the conditions of financial weakness and depression abroad, the exhibition of an instinct which, because it is the instinct of men in the mass, is rather ominous. There seems to be nothing else to relate it to than the belligerent rumblings which come from the late sphere of Balkan conflict and the borders of the more powerful States, which have always been threatened with inclusion in any Balkan warfare. There is no doubt that European finance will do all it can to prevent the present political tensions from breaking out into hostilities, but finance can do little after all to prevent war when national passions are aroused. There was plenty of proof of that in 1912, and now Austria has a dangerous attitude toward Servia, with Greece and Turkey menacing each other. At the same time Russia's position is a factor of no little concern. Once more there has cropped out in Russia an epidemic of industrial disturbances resembling the social upheaval which appeared at the advent of the war with Japan, and Europe knows that Russia is still in that state of political savagery which deliberately favors the precipitation of external troubles as a remedy for internal discontent.

Withdrawing attention from abroad and directing it toward matters at home, there seems to be nothing to militate against a

probability of some regeneration of volumes and values in the Autumn. This, however, is a view contingent on the way in which the country makes its mind up on the orgy of political experimentation to which it is being subjected and on the way in which agricultural conditions turn out. Concretely speaking, the agricultural situation seems to be deteriorating somewhat under less favorable weather and the spread of various insect pests. General business is still anything but good, despite the response of some irregular betterment which has been made in the crop promise to date.

Our foreign trade is not at all to the country's liking. At a time of depression, unprecedented for two decades, exports are making records which can hardly be attributed to anything else than the opportunity offered to other nations to dump their low priced products on our markets. At the same time exports are at a decline, although the outward grain movement is likely from now on to make some desirable change in this respect. The unseasonable course of foreign exchange against us is partly a reflection of affairs abroad and to some degree also an outcome of tariff revision. The Wall Street stock market has displayed a good deal of ability to resist pressure, but in the last few days the share list exhibited sufficient unsteadiness to suggest the likelihood of another interval of unsettlement of values before the necessary assurances requisite to sustained recovery could be vouchsafed from the crops, from political quarters and from abroad.

Washington has done nothing to commend itself in the past week to the good opinion of the thoughtful. There seems to be something especially significant in the bitterly violent manner in which President Wilson and his Attorney General accused the New Haven directors of repudiating their dissolution agreement with the Government. The plausible explanation which offers is that the Administration yielded to the demagogic uproar fomented by the wildly denunciatory report of the Interstate Commerce Commission on the New Haven management of the past, but the statement issued by the New Haven directors, couched in the language of reasonable and fair minded men, showed that the New Haven board was anxious to carry out its compact with the Government and was not at all deserving of the Administration's assault made upon it.

COTTON

July 25, 1914.

THERE has been no interruption of the deadly dullness of the cotton futures markets during the past week. The volume of trading was reduced to its lowest dimensions and it was apparent that the amount of new business being put through was insignifcant. Reports with regard to the condition of the cotton industry abroad were almost shrill in their note of calamity. Never was business so bad; never had the mills had so small a number of contracts for yarns and goods on their books; never was the end of the depression and the return of activity so far in the future. To an extent unknown for many years the foreign spinners were holding off from contracting for any part of their supplies for the coming season. On this side of the water the opinion of merchants and traders was almost equally bearish. American spinners were acknowledged to be having a reasonable demand for their goods, though not on a basis profitable to them. There was an unostentatious demand from them for any and every available lot of merchantable cotton, and merchants able to get such cotton were able to sell it almost instantly at prices so much above the prices of new crop contracts as to make the disparity almost astounding. The basis for the better grades in Liverpool and in the Continental markets was also exceedingly high, despite the comparatively large stocks of American cotton in those markets, as shown by the statistics. Despite the increased use of East Indian cotton by the Continental spinners, the price for American cotton of merchantable quality more than held its own; and the conclusion to be drawn from this fact is one that was much talked of some months ago, but since allowed to fall into oblivion, viz., that while the Visible Supply of American cotton is apparently large as a matter of mere figures, it has become exceptionally small as regards the quantity of merchantable cotton in it. By the end of the season, according to present appearances, the supply of merchantable American cotton will be smaller than for years, the actual bales remaining being only of a character that will extend the consumption of them over many months and perhaps years. Hence such contracts as are now outstanding in the futures markets cannot be regarded as being to any considerable extent hedges against actual cotton. Nor are they hedges coming directly or indirectly from farmers, who are willing to bind themselves to take the present price for their coming crops. All agree that the amount of farmers' hedge selling so far this season has been negligible, as compared with what it has been in past seasons. The contracts sold in the futures markets are consequently to a preponderant extent commitments for the decline made by traders pure and simple. It is this class that is taking upon itself the risk of insuring such spinners as desire to contract for a part of their season's needs, against the vicissitudes of the weather for the balance of the Summer. This brings up the whole question of the weather and of the present expectancy of the crop. It is generally admitted that there is great need of rain in all the States West of the Mississippi River. The entire month of July has been virtually rainless in those States, except for an occasional scanty shower. But hope is strong in the breasts of traders that we are not to experience the antithesis of the prolonged period of excessive rains which we had West of the Mississppi in April, May and early June. Every cloud on the horizon is taken by them as meaning the speedy coming of general rains. A week ago they admitted that another week of high temperatures and drouth would be serious; we have had just such a week, but the point of danger is now postponed for another week. This is precisely what happened in August of last year, when during the larger part of the period of drouth in Texas and Oklahoma cotton was persistently sold in anticipation of rains that came too late. But as a counterweight to the heat and drouth West of the Mississippi this year, encomiums of a superlative kind are lavished upon the crop conditions in the Atlantic States. There have been throughout July numerous showers in these States and few sections have failed to obtain them. The result of these and of the liberal fertilizing customary in these States has been to stimulate the crop to an appearance of great promise. There is talk of bumper yields in all these States, except perhaps North Carolina; and even there the crop is represented as by no means unpromising. Few, however, carry the statistics of rainfall in their heads or remember back for more than a week or two. It is vaguely recalled that the Winter and Spring showed in all the Atlantic States an almost unprecedented deficiency of rainfall, but it is assumed that since March 1, this deficiency has been fully made up for. The real fact is, however, that since March 1 the deficiency of rainfall in the Atlantic States has been greatly augmented. The aggregate rainfall figures show that scarcely a place in the Carolinas, Georgia and Alabama has had between March 1 and July 20 anything like a normal amount of rain. Out of fifteen important places in these States only two (Macon, Ga., and Birmingham, Ala.) have had during this period a normal rainfall, all the remainder falling far below it. Here are the percentages of normal rainfall between March 1 and July 20 received by some of the other places: Charlotte, N. C., 56 per cent; Augusta, Ga., 54 per cent; Montgomery, Ala., 49 per cent; Meridian, Miss., 56 per cent; Atlanta, Ga., 63 per cent; Thomasville, Ga., 66 per cent; Columbia, S. C., 86 per cent; Raleigh, N. C., 87 per cent. The fact then is that, despite the favorable showers of the past month, this whole section of the Cotton Belt has never succeeded in replenishing its supply of moisture in the subsoil. It is unnecessary to point out what must be the consequences of this situation, if there should be a cessation of the showers for even a fortnight.

NEW YORK STOCK OF INSPECTED COTTON

The following table, posted by the New York Cotton Exchange, gives the quantities and grades of cotton in warehouses in the Port of New York on July 23, 1914, inspected, classed, certified and grade guaranteed by the New York Cotton Exchange; also the differences "on" or "off" the basis middling price at which these grades are delivered on contracts:

No. of Bales.	Grade.	Cents.
.....	Fair	1.75 on
5	Strict middling fair	1.50 "
16	Middling fair	1.30 "
7	Strict good middling	.90 "
1	Fully good middling	.78 "
3	Good middling	.65 "
21	Barely good middling	.48 "
312	Strict middling	.32 "
356	Fully middling	.16 "
1,526	Middling	Basis
1,195	Barely middling	.25 off
8,307	Strict low middling	.50 "
14,046	Fully low middling	.85 "
25,243	Low middling	1.25 "
20,777	Strict good ordinary	2.00 "
1,657	Good ordinary	3.00 "
35	Strict good middling tinged	.45 on
616	Good middling tinged	Value of Mid.
3,204	Strict middling tinged	.20 off
6,872	Middling tinged	.40 "
5,242	Strict low middling tinged	1.25 "
541	Low middling tinged	3.00 "
390	Middling stained	1.25 "
90,372	Inspected but not classed, 47 bales.

Raw Cotton Exports from the United States.—According to figures issued by the United States Department of Commerce, exports of raw cotton in the fiscal year ended June 30, 1914, made a new high record, being valued at $610,000,000, and exceeding the former high record of 1911 by $25,000,000. The value of the exports of this staple has doubled in the last twelve years. In 1902 the total was $291,000,000; in 1908, $438,000,000, and in 1911, $585,000,000.

The average export price per pound of the raw cotton exported in the fiscal year 1914 was 12.8 cents, as against 10.2 cents in 1912, and 14.5 cents in 1911. About two-thirds of the domestic product of last year was exported, the number of bales of cotton ginned being 13,965,000, while the exports were 9,165,000 bales.

The United Kingdom and Germany took more than two-thirds

of the cotton exported from the country in the fiscal year just ended, the total to the United Kingdom having been 3,452,000 bales, valued at $232,000,000 and that to Germany, 2,785,000 bales valued at $182,000,000; more than 1,000,000 bales, valued at $74,000,000 went to France. Shipments, varying in amount from 517,000 to 102,000 bales were made to Italy, Japan, Spain, Belgium, Canada, and Austria-Hungary. There were also sent 95,000 bales to Russia, besides large indirect shipments credited to intermediate countries.

Cotton Production of Peru.—The "West Coast Leader," of Lima, Peru, has recently published figures of the cotton production of Peru for the past five years. The paper does not state what part of each year's recorded production was of the variety known as "Rough Peruvian," a tree cotton suitable only for mixing with wool, and how much was Upland cotton of the American type, which is being more and more extensively raised in Peru; but the general understanding of the trade is that at the present time fully 80 per cent of the cotton grown in Peru is Upland. The statement of the "West Coast Leader" is as follows:

"The production of cotton in Peru for the last five years is given in quintals [quintal = 101.4 pounds] as follows: 1909,—380,176.49 quintals [76,871 bales of 500 pounds net weight]; 1910,—330,291.06 quintals [66,983 bales]; 1911,—383,895.34 quintals [77,654 bales]; 1912,—375,651.32 quintals [76,582 bales]; 1913,—525,446.39 quintals [106,560 bales]. This increase of more than 143,000 quintals for the five-year period, 1909-1913, is largely accounted for by the low price of sugar and the 'bull' cotton market. A great many sugar estates in Peru have been planting a fair quantity of cotton, and in addition large areas hitherto devoted to other products or merely waste land are being converted into cotton fields, because of the profits paid by this crop under present conditions. Not only is the quantity of cotton increasing, but its quality is improving as well, owing to the increased use of modern machinery in handling the product. The prices quoted on the Liverpool market determine the market price of Peruvian cotton, as there is practically no market in Lima."

NEW YORK QUOTATIONS FOR STANDARD COTTON GOODS AND YARNS

The following are quoted prices in the New York market for typical standard cotton goods (in cents per yard) and cotton yarns (in cents per pound) on Saturday of last week and on Wednesday of the present week:

Cloths.	Saturday.	Wednesday.
Print cloths, 28 in. 64 x 64s	3¾	3¾
Gray goods, 38½ in., standard	5 3/16-5¼	5⅛-5¼
Brown sheetings, Southern standard	8	8
Denims, 9-ounce	14-17	14-17
Tickings, 8-ounce	13½	13
Standard prints	5¼	5¼
Standard staple ginghams	6¼	6¼
Yarns.		
Southern 2-ply chain warps, 30s	25-25½	25-25½
Southern 2-ply skeins, 60s	45	45
Southern single skeins, 20s	22	22
Southern single chain warps, 20s	22	22
Southern 2-ply chain warps, 20s	22-22½	22-22½
Southern frame cones, 10s	22¾	22¾
Southern frame cones, 5s	25½-26	25½-26
Eastern carded cops, 20s	24	24
Eastern carded cops, 30s	28	28
Eastern carded peeler warps, 30s	30	30
Eastern carded peeler warps, 50s	47	47

THE GRAIN AND PROVISION MARKETS

THE COFFEE SITUATION AT THE CLOSE OF THE SEASON OF 1913-1914

THE well-known New York firm of coffee merchants, Messrs. Henry Nordlinger and Company, has devoted a recent market letter to an interesting survey of the coffee situation, both as regards the season ended June 30, 1914, and as regards the immediate outlook, consideration being taken of the existing status of the Valorization Plan and of the financial and economic conditions in Brazil. The statement is as follows:

"The crop movement during the fiscal year just ended showed an increase of over 1,100,000 bags in the arrivals of mild coffees [as contrasted with Brazilian coffees] in consuming markets, an increase of 1,000,000 bags in the world's visible supply [of all kinds of coffee] and an increase of 1,750,000 bags [of all kinds of coffee] in the withdrawals from port stocks in Europe and the United States.

"We must from now on calculate on a production of approximately 5,000,000 bags of mild coffee in place of 4,000,000 bags as in recent years; but, judging by last year's experience, when the increase in the production of mild coffees did not materially add to the visible supply of these kinds, the world's consumption of mild coffees increased in like proportion. Some of our friends express the opinion that a part of the demand for mild sorts was due to the unsatisfactory cup quality of the last Santos crop, but we cannot agree with this contention as far as the consumption in the United States is concerned, and ascribe the more liberal use of mild coffee to the operation of the pure food law, which is now better understood.

"The stock of mild coffees in the United States on the 1st instant was only about 280,000 bags, being a trifle less than at the same time last year, and not more than sufficient for a normal consumption of about two and a half months. Arrivals of these kinds are now very small and will continue to be so until the marketing of the next crop, which will take place after the turn of the year. We, therefore, expect to see prices ruling steady until then, but may in the meantime experience an advance in the price of desirable qualities, of which the supply is very scant.

"The world's visible supply of all kinds of coffee on July 1, and the New York Spot Price of Rio 7's on that date, for each of the past eight years, was as follows:

	World's Visible Supply.	New York Spot Price, Rio 7's.
1914	11,302,000	8⅞
1913	10,285,000	9¾
1912	11,048,000	14¾
1911	11,070,000	13¼
1910	13,719,000	8⅜
1909	12,841,000	7⅝
1908	14,126,000	6¼
1907	16,400,000	6⅜

"We believe that the visible supply next July 1st will be less than 10,000,000 bags, basing our calculation on the reduction of the incoming crops and on the continuation of consumption to about the same extent as was experienced during the last fiscal year.

"The financial situation in Brazil has undergone some improvement, as is verified by the fact that the Brazil rate of exchange has been ruling above par during the last six weeks. The improvement in that condition can at best be only a slow one, as the crisis through which that country passed was very severe.

"The press reported a few weeks ago that a Brazilian Federal Loan of twenty million pounds sterling had been underwritten by European and American financiers; but, in accordance with recent reports, onerous conditions were made by the underwriters, which the Brazilian Government is reported to have refused to accede to. We have not the least doubt that Brazil will in due time succeed in obtaining all the funds necessary for legitimate requirements, but we entertain serious doubt that any funds will be available for speculative purposes or reckless expenditures.

"The Bankers' Committee which was charged with the management of the Sao Paulo Government coffee was dissolved on the 12th ultimo., and the functions of this committee were then transferred to an Advisory Council of Four, which 'will attend to the careful liquidation of the remaining coffees'. The Sao Paulo Government's holdings consist of 2,622,000 bags of Santos and 520,000 bags of Rio coffees,—together, 3,142,000 bags, all stored in Europe. Three of the council are very prominent coffee merchants who understand the position thoroughly, and who are not likely to take any drastic actions. It is, of course, not known what steps they will take with regard to the liquidation of the remaining coffees, and it would tend to settle conditions materially, if the Council would take the trade into their confidence as to their plans in this respect.

"There are no Sao Paulo Government holdings in the United States. The actions which the Advisory Council may take, therefore, would affect European markets more directly than ours, although a sympathetic effect would naturally be felt here. As long as their course of action remains a mystery, the trade will be very reluctant to carry more than necessary supplies, even should natural conditions offer an inducement to stock up. Such conditions, we believe, are prevailing now. We are at the beginning of a crop which is generally acknowledged to be fully one and a half million bags smaller than consumption requires, and ruling prices are certainly moderate."

Things and actions are what they are, and the consequences of them will be what they will be; why then should we desire to be deceived?—Bishop Butler's Sermons at the Rolls.

AT the time of this writing, the modern world is under the blackest cloud that ever descended upon it. Never before, since the close of the Dark Ages, has the civilized part of humanity been threatened with so general a disaster as now; and never before in all the history of the human race have so many hundreds of millions of human beings been brought face to face with death or ruin. It is not merely that the lives of greater hosts of armed men than have ever before in recorded history been gathered together are exposed to extinction, but the suffering and loss of those not in the line of battle, nor even immediately concerned with the battle itself, must, if the great conflict of nations is entered upon, exceed many times over all previous human experience. Not a nook or cranny of the globe can avoid some part of the evil effects. It is one of the chief glories of our modern times that all humanity is bound together by railroads and steamships and telegraphs and cables, and by the relations of business and personal intercourse which these physical instrumentalities have made possible. The affairs of men all over the earth have become inextricably interwoven and the gain of one nation has become the gain of all. But, as the French say, *tout se paie*—there is a price that must be paid for everything. And the price that must be paid for the easy and prompt distribution of good through the nations, is the easy and prompt distribution of evil, if evil comes. When the evil is of unheard-of proportions, its distribution over the whole of mankind leaves none untouched. Hence the repercussions of the general war among the great nations of Europe, if once that war is joined, must reach the remotest citizen of the remotest country. Even the apprehension of so appalling an event has already brought panics in the markets not only of Europe, but also of North and South America, of Asia, of Australasia and even of remote South Africa. Everywhere those who deal in securities or commodities find their calculations upset, their credit to a large degree inoperative, and their usual expedients for protecting themselves against ruinous losses rendered vain. Through these intermediaries between industry or agriculture and the public, the trouble is communicated to the public itself, first to the managers of industry and agriculture and then to all those engaged in these pursuits, great or small, who in fact constitute the public. Each and every member of the public, then, wherever he may be in the world, must ultimately pay his share of the great loss.

Dark as the outlook is, we do not believe that there will be a general European war; and we say this, despite the fact that it is possible that by the time this paper issues from the press two or more of the great nations of Europe may have begun hostilities against each other. It is too little remembered, however, on occasions of this kind that what is seen and recorded by the press is the menacing exterior of things; and that the tremendous forces of counteraction and restraint gather themselves and do their work, unseen and unheard of until their object has been attained. It is inconceivable that the men in whose hands lies the welfare of the nations of Europe, other than imperious and enraged Austria-Hungary and vindictive Servia, with her semi-barbarous patron, Russia, should not be at this very moment bringing into play the innumerable instrumentalities of peace which they have at their command. Their task is indeed a great one, for there is a conflict of policy in Europe with regard to the true means of assuring peace. The older principle of the Balance of Power in Europe, which England has for centuries preeminently represented and fought for, was through Bismarck's restless and ambitious statecraft in the interest of Germany replaced for the greater part of Continental Europe by the theory of groups of allied nations strong enough, when acting in concert, to over-awe such countries as might be aggressive or discontented with their position. The Triple Alliance, begotten of Bismarck's theory, was in its heyday sufficient to accomplish Bismarck's purpose; and the tradition of its efficacy has become strong in the three members of the Alliance, and in many countries outside it. But it was not to be expected that such a *consortium* would remain without imitation. If Germany could find overpowering strength in such an association of nations, the same would obviously be true of other nations little disposed to see Germany the mistress of their world. The Dual Alliance between France and Russia, followed by the Triple Entente, which brought England into this second association of nations, was the logical and virtually unavoidable result. Here the Bismarckian theory, which had been regarded by its author as a miracle of statecraft and which for a generation was so taken by the majority of the politicians of Europe, was proved to be nothing more than a certain means of dividing Europe into two vast armed camps, supported by the toiling millions and obliged to keep ever on the *qui vive*, lest one

almost absolute confidence that there will be no general European war. The arguments of the pacificators would have done their work; and any superficial indications of continued animosity would be mere playing for position in the final settlement of the questions at issue.

There is, however, the possibility that our prognostications may be proven false by the event; and in the present excited state of the public mind, even in the United States, remote from the actual seat of the trouble, it is desirable to consider with calmness what will be the longer effects of a war embracing practically all of Europe. The disposition now is to dwell upon the vast loss of life, the huge waste of property, the universal destruction of credit, the deadly economic lassitude for long years of the countries which have spent their all of energy and capital in the titanic struggle. We hear it said on every hand that Europe would not recover from the effects of such a war in a half-century; that she must employ for at least that period of time such capital as she might painfully save to repair the damages and losses she had suffered; that the countries which have been relying upon European assistance to develop their unworked resources, whether these countries be in North and South America, in Australasia, in Asia or in Africa will henceforth be forced to rely upon themselves. In other words, it is alleged that the whole great system of modern finance, having its domicile in Europe and reaching out to every undeveloped country on the globe with its streams of fructifying capital, will be found to be, after this war, a mere chapter of history. An universal readjustment of the world's commercial and financial relations will, so it is said, be called for.

We cannot take any such view; and in justification of our opinion we cannot do better than to quote a passage, once before quoted in these pages, from that English economist whom time has proved to be, after all, the wisest and the most far-sighted of all those who have written upon the great whole of political, or public, economy, which embraces all the adjustments of men to their physical environment here on earth, John Stuart Mill. Speaking of the economic losses resulting from the devastations of war, Mill wrote as follows in his "Principles of Political Economy":

"This perpetual consumption and reproduction of capital affords the explanation of what has so often excited wonder, the great rapidity with which countries recover from a state of devastation; the disappearance, in a short time, of all traces of the mischiefs done by earthquakes, floods, hurricanes, and the ravages of war. An enemy lays waste a country by fire and sword, and destroys or carries away nearly all the movable wealth existing in it; all the inhabitants are ruined, and yet in a few years after, everything is much as it was before. This *vis medicatrix naturae* has been a subject of sterile astonishment, or has been cited to exemplify the wonderful strength of the principle of saving, which can repair such enormous losses in so brief an interval. There is nothing at all wonderful in the matter. What the enemy have destroyed, would have been destroyed in a little time by the inhabitants themselves; the wealth which they so rapidly reproduce, would have needed to be reproduced and would have been reproduced in any case, and probably in as short a time. Nothing is changed, except that during the reproduction they have not now the advantage of consuming what had been produced previously. The possibility of a rapid repair of their disasters, mainly depends on whether

the country has been depopulated. If its effective population have not been extirpated at the time, and are not starved afterwards; then, with the same skill and knowledge which they had before, with their land and its permanent improvements undestroyed, and the more durable buildings probably unimpaired, or only partially injured, they have nearly all the requisites for their former amount of production. If there is as much of food left to them, or of valuables to buy food, as enables them by any amount of privation to remain alive and in working condition, they will in a short time have raised as great a produce, and acquired collectively as great wealth and as great a capital, as before, by the mere continuance of that ordinary amount of exertion which they are accustomed to employ in their occupations. Nor does this evince strength in the principle of saving, in the popular sense of the term, since what takes place is not intentional abstinence, but involuntary privation."

Such is the cool-headed way of looking at the permanent results of a general war in Europe. That for a time—some four or five years, perhaps—the countries that have been engaged in the war will be impoverished and will not have at their command the abundant stores of capital they have been able to employ all over the world in recent years, is no doubt true. But after some such short period, Europe will have all her capital in hand again and will play again the part she has been playing for long years as the provider of the capital required for the rapid development of the other countries of the world. It might indeed happen that the interim would give to the United States an opportunity to make a commanding place for itself in the great whole of world commerce and industry; but Europe, strong as ever, plus the United States, become as strong as Europe, would be a benefit and not a loss to civilized mankind.

Arthur Richmond Marsh

RESULTS OBTAINED BY THE BRITISH COTTON GROWING ASSOCIATION IN 1913

AS is well known, the chief cotton-consuming countries of Europe, with the possible exception of Austria-Hungary, are all making earnest endeavors to develop the cultivation of cotton in their own territories (chiefly colonial), with the object of decreasing the dependence of their cotton manufactures upon the production of the United States. In most cases governmental assistance is lent, and the spinners maintain associations which contribute on a greater or less scale. England, France, Germany, Russia, Italy, and even Spain to a less extent, are busy with the problem. The results obtained thus far are, even in the aggregate, of comparatively small proportions, in view of the steadily increasing demand for cotton goods and consequently for raw cotton from the entire world. In fact, with all the efforts made, the annual supply of cotton fails to keep fully up with the rising demand. The supremacy of the United States as a source of supply is as yet so far from being threatened by the development of outside production that it may be said to be more confirmed to-day than ever, as is shown by the higher and higher prices which American cotton commands from year to year. None the less, it is of importance to the student of cotton, as well as in some degree to the cotton merchant and the cotton manufacturer, to keep track of the progress being made in raising cotton outside of the United States.

The largest, most extended and most energetic of the agencies in foreign countries, working for the extension of cotton culture, is the British Cotton Growing Association, which has now (as a revival of a similar association in the 50's and 60's of the last century) been active for a little over nine years. This Association has spent and is still spending very large sums of money in experimentation with cotton culture in virtually every promising portion of the British Empire. It has had many failures, but it has not been discouraged by these; and it has at length begun to see at least a respectable amount of non-American cotton produced, as a result of its efforts. Hence a good deal of interest attaches to the Association's ninth annual report, which has recently been issued. In "The Trade Index," of New Orleans, an excellent summary of this report has just been published; and this is here given:

* * *

The ninth annual report of the British Cotton Growing Association for the year 1913 has recently been published and reveals the rapidity with which the association's business has grown. The total amount of cotton which has passed through its hands during the last six years is given as: 1908, 16,713 bales (of 400 pounds each), value, $1,094,417; 1909, 20,028 bales, value, $1,095,342; 1910, 21,388 bales, value, $1,441,263; 1911, 27,673 bales, value, $1,818,042; 1912, 40,094 bales, value, $2,467,909; 1913, 47,466 bales, value, $3,217,861. During 1913 the association supplied to planters and others buildings, machinery, stores, etc., amounting in value to over $262,800, as compared with $291,990 in 1912, $233,590 in 1911, and $116,800 in 1910. The following facts relative to the production of cotton in various British colonies are taken from the report mentioned:

The quality of cotton produced in the West Indies continues most satisfactory. Owing to the fashions in women's dresses, there was no improvement in the demand for the best grades of cotton, but no great difficulty was experienced in disposing of all the cotton that was produced in these islands. However, at present, the association cannot recommend any increase in acreage. This is unfortunate, for there is no doubt that the West Indies can produce cotton equal, or even superior, in quality to that grown in any part of the world. Exports in the year ended September 30, 1913, amounted to 2,154,475 pounds of sea island and 459,460 pounds of Marie Salante cotton, giving a total of nearly 7,000 bales (value $746,852), which is rather more than the quantity produced in 1912.

In accordance with the terms of the Imperial grant of £10,000 ($48,665) per annum, the association has maintained its buying and ginning stations at Labolabo in the Southern and Tamale in the Northern part of the Gold Coast colony. The quantity of cotton produced remains disappointingly small, and if the grant is discontinued the association will be compelled to cease operations in this section.

The 1913 crop in Lagos was eminently satisfactory. The association's total purchases of this cotton amounted to 13,694 bales, as compared with 9,146 bales in 1912. The largest crop previously raised in Lagos, namely, in 1909, amounted to 12,100 bales. The association was able to maintain a minimum buying price of 1⅛d. (2¼ cents) per pound for seed cotton, which works out at about 6½d. (13 cents) per pound of lint delivered in Liverpool. The policy adopted by the association is to pay the highest possible price to the native producer, and valuable assistance has been rendered by the European merchants trading in Lagos. With their co-operation, the association has been able to buy cotton on an economical basis and the Lagos branch is now self-supporting.

In view of the further probable increase in the production of Lagos, the association authorized the erection of another ginning factory, with eight gins and a large hydraulic press. Unfor-

tunately, harmattan winds prevailed during much of the growing season of the present crop, and it is feared that the 1914 yield will not equal that of the year under review. Shipment of the machinery has therefore been delayed, but a small electric-lighting installation was sent out, so that in case a ginner is disabled by fire or breakdown one of the others can be worked at night. During 1913 the three factories at Lafenwa, Ibadan, and Oshogbo were fully employed, and the erection of an additional factory cannot be long delayed.

The quality of the cotton has been well maintained, and there is no difficulty in selling the crop as soon as it arrives in England. In fact, the quality is now so regular and dependable that spinners are willing and anxious to purchase it before it is shipped from Africa. Owing to the association having absolute control over the industry and the issue of seed, it is able to insure that only suitable seed is used, with the result that Lagos cotton is the most regular in quality of any produced in the British colonies. The Agricultural Department is carrying out experiments for raising improved types of cotton, but what is most needed is a variety which will give a higher percentage of lint. Lagos cotton does not give more than 27 per cent of lint, so that it takes nearly 3¾ pounds of seed (unginned) cotton to yield one pound of lint. If a variety could be established giving 30 per cent of lint, 3⅓ pounds of seed cotton would yield one pound of lint, and the buying price could be raised to 1¼d. (2½ cents) per pound without materially increasing the cost of the lint delivered in Liverpool.

The cost of the seed distributed for planting, which amounted in 1913 to nearly $8,300, is paid by the association.

Some difficulties arose as to shipping cotton over the railway during the height of the season, which coincides with the palm-kernel crop. The association has been giving serious consideration to the question of subsidiary transport and to the possibility of establishing some system of auxiliary feeders to bring produce to the main trunk lines. Ordinary road transport in Africa is generally out of the question, as horses and oxen cannot live; and motor vehicles do not provide an economical form of transportation, if the cost of both the construction and the maintenance of roads suitable for motors be taken into consideration. The association has suggested to the authorities that it would be extremely useful if an experiment could be tried with a light railway or tramway of two or two and a half foot gauge, in order to prove whether this means of transport would pay. Such a railway should be of the cheapest construction and should not be looked upon as anything but a feeder for the main line. At present practically the whole of the crop has to be brought to the railway on men's heads.

Satisfactory progress is being made with the Lagos Bar, 2,098 feet of the western mole and 7,446 of the eastern being completed, and there is now a depth of water on the bar of 17½ to 18½ feet. Before long ocean-going steamers should be able to enter Lagos Harbor at all times, which must considerably reduce the cost of transportation.

In accordance with the Government agreement, the work of the association's Southern Nigeria branch has been maintained, but while there has been a slight improvement in production, the results are disappointing, and when the Imperial grant ceases this center will be closed. In Northern Nigeria the effect of prevailing harmattan winds was seen in the association's smaller purchases of fiber.

The association has to record an unexpected difficulty which has recently arisen in Northern Nigeria. A large amount of seed was distributed in 1913 for the 1914 crop, which is now coming forward. A large quantity of cotton has been grown, but, probably in consequence of the short crop in the previous year, there has been a heavy demand in the Zaria district for local manufacturing, and the price for seed cotton was put up to 1½d. (3 cents), and even 2½d. (5 cents) per pound. The association raised its buying price to 1⅛d. (2¼ cents) per pound, which represents over 6½d. (13 cents) per pound in Liverpool; but it was impossible for it to pay anything like 2½d. for unginned cotton, for this would mean 9d. (18 cents) in Liverpool. This is a difficulty which time will overcome, for sooner or later native cloths will be, to a great extent, superseded by Lancashire's productions. At the same time it is disappointing that the association should have had all the expense and trouble of distributing the seed and getting the cotton grown and then have to stand by while other people purchase it. There has, however, been a fair increase in the Ilorin, Lokoja, and Yelwa districts, and the association is considering the possibility of developing these districts more rapidly. It is also continuing its experimental work on the Benue River.

A certain amount of cotton is being grown along the coast of British East Africa, but up to now no great progress has been made in this colony, except in the Kisumu district. The main interest of the association in British East Africa is in the fact that it is the outlet for Uganda cotton.

The quality of the cotton produced in Uganda is generally satisfactory and is filling a distinct want, as it can be sold almost on arrival as a substitute for the better grades of Texas cotton at prices ranging from 50 to 120 points on middling American. There have been fewer complaints recently as to careless ginning and immature cotton, but there is still a very large amount of stained and immature cotton.

The Department of Agriculture has been experimenting with long-staple Upland cotton, and the resulting seed has been distributed on a large scale. It is too soon to decide definitely as to whether it is desirable to extend the cultivation of this class of cotton. Given equal production per acre, there is no doubt it would be wise to encourage the planting of that variety which realizes the highest price. At the same time it must not be forgotten that the market for long-staple cotton is a limited and difficult one. For every spinner who uses cotton 1¼ inches in length there are over a hundred whose requirements run from 1 inch to 1⅛ inches. Further, the spinner who requires higher grade and longer staple cotton is catering for the better class demand, and therefore rejects any cotton not up to standard. Some of this long staple cotton was excellent in quality, but some shipments were distinctly soft and weak.

Climatic conditions in 1913 were most unfavorable in Nyasaland for cotton grown in the highlands, but this was more than balanced by success in the lowlands and also by the rapid extension which is taking place in native cultivation. As is usually the case with small crops, the quality suffered and the cotton grown in the highlands in 1913 did not maintain the exceptional character of the Nyasaland cotton. There is, however, no reason to look on the experience of 1913 as anything more than a temporary setback. The crop at Vua was also unsatisfactory, and consequently there was little return to compensate the association for the expense of maintaining ginning factories and buying stations in this out-of-the-way center. The association now has four ginning factories in Nyasaland—at Port Herald, Chiromo, Fort Johnson, and Vua.

Many planters have shown an inclination during recent years to grow tobacco. One cannot blame them if they find it pays better, though it is unfortunate that it should be so, especially as the establishment of cotton growing in Nyasaland has been largely built up on the system of advances inaugurated by the association. The association has therefore decided to curtail these advances, but in a gradual manner, so as not to cause any inconvenience, and

it hopes to establish in their place a system of advances against actual cotton or to purchase the same outright.

The subject of transport for Nyasaland cotton is one that has from time to time engaged the serious attention of the association. On many occasions fiber was held up for months owing to low water in the Shire River. There is, however, prospect of these difficulties being removed to a large degree. A railway is being constructed from Port Herald to Zambesi, which will make it possible to bring cotton down from Blantyre at all seasons of the year. A scheme is also under consideration for the construction of a railway from Beira to the Zambesi, which will ultimately be connected by bridge with the Blantyre-Port Herald-Zambesi Railway, and there is every reason to hope that the construction of this line may be commenced soon. This will avoid the present difficult and expensive system of transport in barges via Chinde to Beira. The association has continually urged upon the Colonial Office the vital importance of the extension of the railway from Blantyre to Lake Nyasa so as to open up the northern portion of the colony. Ultimately this line will be extended to Fort Jameson in Northeastern Rhodesia, and probably a railway will be constructed at some time or other between Lake Nyasa and Lake Tanganyika. There is no doubt that the Nyasaland Railway will eventually be one of the main trunk lines in Africa.

The results obtained at Mazabuka, Rhodesia, were so unsatisfactory that the association decided to withdraw from this center and to hand over the work to the British South Africa Company. The association has, however, been actively co-operating with the North Charterland Exploration Company in operations in Northeastern Rhodesia, and satisfactory results are now being obtained. There seems to be every reason to hope that when better transportation facilities are available a considerable quantity of cotton will be produced in Rhodesia.

The association is unable to report any satisfactory results from the various districts of the South Africa Union.

While the bill guaranteeing the interest on a loan of £3,000,000 ($14,599,500) has been duly passed by the British Parliament, the loan has not yet been issued, and it is hoped there will be as little delay as possible in commencing the works for the irrigation of the Gezira plain. (Reference to the proposed loan was made in Daily Consular and Trade Reports for Feb. 10, 1913.) In the meantime the Government plantation at Tayiba has been extended to 2,000 acres, and is giving eminently satisfactory results; the Sudan Plantations Syndicate's operations at Zeidab were very successful in 1913; the Tokar crop was much more satisfactory than that of 1912, but the rain crop of Wad Medani district was a failure.

An estimate of the cotton grown in new fields in the British Empire during the last three years follows, the figures representing bales of 400 pounds:

	1911. Bales.	1912. Bales.	1913. Bales.
West Africa:			
Gold Coast	100	120	100
Lagos	5,800	8,900	14,000
Southern Nigeria	300	270	200
Northern Nigeria	600	2,600	2,000
Totals	6,800	11,890	16,300
East Africa:			
Uganda	20,000	29,000	26,000
British East Africa	500	900	1,000
Nyasaland and Rhodesia	5,300	7,200	7,500
Totals	25,800	37,100	34,500
Sudan	21,000	15,000	20,000
West Indies	6,500	6,500	7,000
Other	700	1,000	1,000
Grand totals	60,800	71,490	78,800

This year the British Cotton Growing Association hopes to reach a production of 100,000 bales.

THE WORLD'S MAIZE CROP

[Reprinted from "The Economist" of London]

THERE is agreement among experts that America is the original home of the maize plant, and the cereal has been cultivated both in North and South America from prehistoric times. The earliest European explorers of America found the Indian tribes cultivating maize as their chief cereal. Longfellow's poem "Hiawatha" gives an insight into the importance of the place held by maize in the life of the American Indians, and the legends which they wove around it. The ancient Aztecs of Mexico largely depended upon maize, and Prescott tells us that in the sixteenth century maize was "the great staple of the country, as, indeed, of the whole American continent." The first generations of English-Americans subsisted mainly on maize, and it still continues to be an important article of diet. In one form or another it is met with in all parts of the country and among all classes of people.

From America maize was introduced into Europe about the year 1500. It is stated to have been sent to Seville for cultivation, and to have spread from Spain into France and Italy, and into Eastern Europe. Maize was also introduced into Northern Africa from Spain, and probably direct from Brazil into South Africa by the Portuguese, during the sixteenth century. The size of the grain and the heavy yield and easy cultivation of the maize crop were probably responsible for the early and rapid spread of this cereal over Africa, ousting the much-grown native grains. Maize is now so largely used as a staple article of food by the Bantu and other races that it is difficult to realize that it has not always been so. But history and the accounts of travelers tell us that within the memory of man maize was unknown as a cultivated crop in many parts of South Africa; and this is confirmed by white men and natives still living. The introduction of maize into Asia is also attributed to Portuguese voyagers, soon after the establishment of the Portuguese settlements in the East Indies, at the beginning of the sixteenth century. It is possible also, as Mr. Burtt-Davy states in his exhaustive study,* that maize was introduced into Asia, through Turkey, while its exotic character is indicated by the absence of native Asiatic names.

The distribution of the world's maize crop among different producing countries at the present day is shown in the table below, compiled from the Year-Book of the United States Department of Agriculture. Side by side with the maize crops is given the production of wheat for purposes of comparison:

(In Thousands of Bushels.)

The world's maize crop in 1910 amounted to over 4,000,000,000 bushels—a figure which was considerably greater than the aggregate production of wheat by all countries. The table shows clearly that the maize crop is still largely concentrated in its original home—America. Of the whole crop considerably more than two-thirds was produced in the United States, where the acreage is about double and the total production about four times that of wheat.

It is clear from the table that the United States is the supreme factor in the world's maize supply, and that other countries are individually nowhere. Other parts of America produce only about one-tenth of the United States' crop, while the whole of Europe produces only about one-quarter, and Africa and Australasia almost insignificant quantities. The causes of this uneven distribution are connected largely with the climatic requirements of the maize crop, and the kind of soil in which it flourishes. Mr. Burtt-Davy summarizes the requirements of the crop in the following words:

"Speaking broadly, the most favorable conditions are long, humid Summers, hot days and warm nights, comparatively heavy intermittent rains, with abundance of clear, sunshiny weather between. Hot arid climates, hot and continuously humid and shady regions, and arid cool temperate climates with short Summer season are generally unfavorable to the commercial production of maize. Open plains or plateaux are, therefore, more suitable than forest country."

Maize is clearly a crop which flourishes in warm climates, and its importance as a source of food for man and his domestic animals has led to its cultivation in practically all the tropical and sub-tropical parts of the world. It is also grown in parts of the warm-temperate zone where the Summer temperature and rainfall are relatively high and sunshine is plentiful.

The climate required by wheat is different from that in which maize flourishes. Wheat is mainly a product of the temperate zones. It thrives very much further from the equator than does maize, and it does not require so much heat or moisture. Consequently, we find that the distribution of the wheat crop over the world is very different from that of maize. In 1909 and 1910 Europe produced roughly half the world's crop, though the production of North and South America has since probably expanded very much more than the European supplies. North America produced about a quarter of the world's wheat crop, while Asia and Australia are also very large growers. In Europe the maize crop amounts to less than one-third of the wheat crop, and except for Spain and Italy is practically confined to Eastern Europe. In the United States, Argentina and Egypt it is a larger crop than wheat, but elsewhere it is of comparatively little importance. It is, however, significant that the farmers of the U. S. A., who may perhaps be regarded as the most adaptable representatives of their craft in the world, should find it pays to give so much more attention to "corn" than to wheat. The strong position of the crop is no doubt partly due to the fact that Indian corn is indigenous to the States; but its cultivation would not have been maintained at a time when so many crops and products are competing for the soil, unless it had supreme commercial advantages.

The uneven distribution of the world's maize supplies, combined with the widespread demand, naturally gives rise to an immense trade in maize, the principal centre of demand being naturally Europe, if the United States be excepted. The consumption of maize in the United States is in normal years about twenty-five bushels per head of the population, which is said to be the heaviest rate of consumption of any cereal by any people in the world, and nearly twice as much, according to population, as the consumption in Europe of all the other cereals. Greater knowledge of the value of maize as an article of human food is increasing the demand in Europe.

Great Britain, like other European countries, has during recent years imported increasing quantities, and as the value of the commodity becomes more generally known, these imports are likely to show still further increase. The figures for the last few years are as follows:

QUANTITIES OF MAIZE IMPORTED INTO THE UNITED KINGDOM FROM EACH COUNTRY, 1908-1912.

In spite of America's preponderant position as producer, we obtained a comparatively small part of our supply from that source, but relied chiefly on the Argentine. Only in 1911, when the Argentine crop was short, and the United States had a "bumper" harvest, did we import more from North than from South America. In that year, however, we imported more from Roumania than from the United States, though, as a rule, the Roumanian shipments appear to be somewhat less than those from the United States.

INDUSTRY, COMMERCE AND FINANCE

Opening of the Cape Cod Canal.—The formal opening of the Cape Cod Canal took place on Wednesday of this week (July 29, 1914). A large gathering of notable persons attended the opening ceremony and addresses were made by Mr. August Belmont, president of the private company which has successfully accomplished the task of cutting a water-way across the base of Cape Cod, by Mr. Seth Low, Governor Walsh of Massachusetts, and others. The Cape Cod Canal is a most interesting achievement in itself and its commercial importance in the future must be very great. It is added to the small list of artificial oceanic waterways, of which the Suez Canal and the Panama Canal are the supreme examples, but to which also belong the Corinth Canal, across the Isthmus of Corinth which connects the Morea (ancient Peloponnesus) with the mainland of Greece; the Kiel Canal, connecting the North Sea with the Baltic; and perhaps the Manchester Ship Canal, by means of which ocean-going vessels may reach Manchester, England. The great inland canals, like the Sault Ste. Marie Canal, the Welland Canal, and the new Erie Canal, in this country, or the canalized river systems of Germany, France, Holland and other European countries, belong in a somewhat different category from these artificial oceanic waterways.

Like the Suez Canal and the Panama Canal in their time, the Cape Cod Canal is the realization of a project running centuries into the past. More than two hundred years ago it was perceived by the merchants and mariners of New England that not only a considerable distance, from and to the upper New England Coast, but also unusually grave perils of the sea, could be saved by cutting a canal across the narrow strip of land, eight miles wide, which separates Buzzard's Bay on the South from the bay to the North which lies behind the long projection of Cape Cod out into the Atlantic. As early as 1690, the General Assembly of Massachusetts adopted a resolution in favor of the construction of such a canal; and since that time the project has been revived many times. Two attempts to accomplish the task have ended in failure within the last thirty years.

The engineering difficulties in the way of the construction of the present Cape Cod Canal were, as regards the actual digging, no more serious than those confronting De Lesseps in the construction of the Suez Canal, most of the work of excavation being through low-lying sandy soil. In fact, the vastly improved dredging machinery of to-day gave great advantages, in comparison with the Arab and coolie hand workers upon whom De Lesseps had to rely. On the other hand, a heavy railroad and highway traffic passes over the neck of land, and the engineer in charge, Mr. William Barclay Parsons, had many complex problems to meet, in the way of keeping open these lines of land traffic and still giving sufficient head-room for the passage of ocean-going vessels through the canal. In comparison with the Panama and Suez canals, the length of the Cape Cod Canal appears almost insignificant,—thirteen miles, of which eight through the neck of land and five through the shoal waters of Buzzard's Bay,—as contrasted with ninety-nine miles for the Suez Canal and rising fifty miles for the Panama Canal. Moreover, the Cape Cod Canal is not yet completed to full depth and width for the heaviest ocean tonnage,—the present depth at low water being 25 feet and the bottom width (except at approaches and passing points) being 100 feet. It is proposed, however, gradually to deepen and widen the waterway, until the largest battle ships or ocean liners may pass through.

In point of available traffic, however, the Cape Cod Canal will surpass all other artificial ocean waterways, except perhaps the Suez Canal. The Panama Canal will be far outstripped. The ocean-borne traffic between Boston and other Northern New England ports and the Atlantic ports South of New England is enormous and growing annually by leaps and bounds. It is estimated to be even now in excess of 25,000,000 tons annually. It is true that the use of the Cape Cod Canal will save this traffic only about seventy miles in distance; but, what is really of far more importance, it will save it the often extremely dangerous passage in the open Atlantic around Cape Cod and the perilous and delaying heavy fogs which prevail over the shoal waters immediately to the South of Cape Cod. The mere saving in marine insurance in favor of the Cape Cod Canal, translated into tolls, will in itself be enough to yield a very large return upon the investment. It is therefore to be expected that the new Canal will prove a powerful stimulant to water-borne commerce between upper New England, with its important and numerous industries, and all the southerly Atlantic and Gulf States.

* * *

Railway Revenues and Expenses in May.— The summary of revenues and expenses of steam railroads in the United States, in May, issued by the Bureau of Railway Economics at Washington, shows that roads operating 225,858 miles of line or about 90 per cent of the total of such mileage in the United States, returned operating revenues for the month of $232,567,938. This amount includes revenues from freight and passenger traffic, from carrying mail and express, and from miscellaneous sources connected with rail operation. Compared with May, 1913, total operating revenues show a decrease of $25,038,021. Total operating revenues per mile averaged $1,030 in May, 1914, and $1,150 in May, 1913, a decrease of $120, or 10.4 per cent. There was a decrease of 13.4 per cent in freight revenue per mile, and a decrease of 2.8 per cent in passenger revenue per mile. Operating expenses, which include all the costs of maintaining track and equipment, operating trains, securing traffic and of administration, amounted to $176,029,940. This was $9,921,181 less than for May, 1913. These operating expenses per mile of line averaged $779 in May, 1914, and $830, in May, 1913, a decrease of $51 per mile, or 6.1 per cent. Net operating revenue, that is, total operating revenues less operating expenses, amounting to $56,537,998, which was $15,116,840 less than for May, 1913. Net operating revenue per mile of line averaged $250 in May, 1914, and $320 in May, 1913, a decrease of $70 per mile, of 21.7 per cent. Taxes for the month of May amounted to $11,905,110, or $53 per mile, an increase of 11.2 per cent over May, 1913. Operating income, which is net revenue from rail and auxiliary operations, less taxes, averaged $197 per mile of line, and in May, 1913, $273, thus decreasing $76, or 27.9 per cent. Operating income for each mile of line for each day in May, averaged $6.35, and for May, 1913, $8.81. The operating ratio for May, that is, the per cent of total operating revenues absorbed in operating expenses, was 75.7 per cent, which is comparable with 72.2 per cent in May, 1913, and 71.4 per cent in May, 1912.

Mineral Production as a Measure of Industrial Activity.—A statement issued by the Secretary of the United States Department of the Interior, Mr. Lane, says:

"The Nation's output of mineral products of various kinds is a fair measure of industrial activity. For several months now, the Department of the Interior, through the Geological Survey, has been issuing its final statistics of the 1913 mineral production which confirms in detail the preliminary estimates issued early in January for the principal minerals. In the large majority of cases these authoritative figures tell in one way or another the

some story of industrial prosperity. In coal production the increase has been general, and it is this very fact that serves as an unmistakable index of general health of the industrial world. But as State after State is shown to have had its banner coal year—West Virginia, Illinois, Ohio, Kentucky, Alabama, Virginia, Oklahoma, New Mexico,, Montana, Texas, Utah and Pennsylvania, in both bituminous and anthracite,—the record becomes spectacular. Ohio, for instance, had its floods, yet there was a substantial 6 per cent increase in coal output, and the miners averaged more working days in 1913 than in 1912. Twelve other States showed increases varying from 3 per cent in Iowa to 12 per cent in Indiana, and over 15 per cent in Washington, and only Colorado, Maryland, North Dakota, Nevada, Idaho and Missouri show decreased output, the Colorado labor troubles explaining the only significant decrease. In a similar way the figures of coke production give large increases, and coke, it may be noted, is a step nearer the metal industry. Petroleum production, in 1913, exceeded all records, an increase of 25,000,000 barrels and $72,000,000 over the 1912 returns.

"In metal mining, the iron and zinc mines had a banner year, while gold, silver, lead and copper showed a decline in many of the largest producing States. Structural materials, on the other hand, exhibit marked gains almost without exception. Thus 1913 was the banner year for cement, which gained more than 11 per cent over 1912. The record outputs are also shown for lime, building sand and gravel, sand-lime brick, and glass sand. Other mineral products for which 1913 was a record-breaking year are bauxite and aluminum, sulphuric acid, feldspar, mica, pottery, and talc and soapstone, while substantial increases are reported for gypsum, phosphate rock, abrasives, barytes, slate, and salt. These production figures all express well-maintained activity in mines, smelter, furnace and mill and prove that the American people are utilizing more of the Nation's great mineral resources than ever before. A few weeks later when figures are at hand for all of the mineral products, it is expected that 1913 will be found to have overtopped both 1912 and 1907 which have hitherto held the record."

* * *

Cement Production in the United States.— The year 1913 was a record breaker in the cement industry, according to Ernest F. Burchard of the United States Geological Survey, in a chapter from "Mineral Resources in 1913," just published. The total quantity of Portland, natural and Puzzolan cement produced in the United States last year was the greatest in the history of the cement industry, amounting to 92,949,102 barrels, valued at $93,001,169, compared with 83,351,191 barrels, valued at $67,461,513, in 1912.

The total production of Portland cement in 1913, as reported to the Geological Survey was 92,097,131 barrels, valued at $92,557,617; the production for 1912 was 82,438,096 barrels, valued at $67,016,928. The quantity of Portland cement produced, 92,097,131 barrels, is equivalent to 15,623,620 long tons. Compared with the production of pig iron for 1913, which was 30,966,301 long tons, the Portland cement production is nearly 50.5 per cent of the quantity of pig iron.

Of the 113 producing plants in the United States in 1913, twenty-three were in the State of Pennsylvania, whose output was 28,701,815 barrels of Portland cement, the largest quantity produced by any one State. The second greatest production came from Indiana, with 10,872,571 barrels, and California was third, with 6,159,182 barrels.

The natural cement produced in the United States in 1913 amounted to 741,658 barrels of 265 pounds each, valued at $345,889, compared with an output of 821,231 barrels, valued at $367,222 in 1912, a decrease in 1913 of 76,573 barrels and of $21,333 in value. Puzzolan cement was manufactured, in 1913, at three plants in the United States, in Alabama, Ohio and Pennsylvania. The output of Puzzolan and Collos cements, in 1913, was 107,313 barrels, valued at $97,663, compared with 91,864 barrels, valued at $77,363, in 1912, an increase in quantity of 15,449 barrels and in value of $20,300.

The United States has a comparatively small export trade in cement. In 1913, the total quantity exported was only 2,964,358 barrels, most of which was Portland cement, valued at $4,270,666, compared with 4,215,232 barrels, valued at $6,160,341, in 1912.

* * *

Servian Industrial Enterprises.—While Servia is not a manufacturing country, during the past eight years there has been a notable increase in industrial enterprises. At the end of 1905, $12,000,000 was invested in industries; 9,670 people were employed; and the value of the product was $6,600,000. At the end of 1913, the amount invested was $27,000,000; people employed, 18,000; and value of products, $21,000,000. The statistics do not include New Servia, which was added as a result of the war of 1913. The leading Servian industries in order of importance, are: Flour mills, prune packing, meat packing, metal smelting, breweries, sugar factories, textile mills, and saw mills. Smaller enterprises include the manufacture of brick and tiles, paints, leather, iron, soap, etc. Apparently their only exports are prunes and plum jelly, meats, smelted copper, and a small quantity of flour and bran.

* * *

The Australasian Wheat Harvest.—Revised returns of the wheat crops in the various States of the Australasian Commonwealth make possible the following tabulation of production:

	1911-12. Bushels.	1912-13. Bushels.	1913-14. Bushels.
Victoria	20,891,877	26,223,104	32,936,245
New South Wales	25,088,102	32,487,336	38,043,360
South Australia	20,352,740	21,496,216	16,936,988
Western Australia	4,358,904	9,168,594	13,496,242
Queensland	285,109	1,975,505	2,053,783
Tasmania	659,615	630,315	421,380
Totals	71,636,347	91,981,070	103,887,998

Commenting on these figures, "The Australasian Insurance and Banking Record" says that the total of 103,887,998 bushels for 1913-14 may be subject to some deduction, as the tendency of official returns in some States is, if anything, to err in excess. Assuming the correctness of the total the exportable surplus, after providing for Australian consumption, would approach 70,000,000 bushels, but allowance has to be made not only for the possibility of a slight over-estimate, but also for stocks to be carried forward at the end of this year. Since the opening of the season, reckoning from the middle of December, the total exports, including the equivalent of flour shipped, have reached a total of over 53,000,000 bushels, the value being about 9¾ millions sterling.

* * *

The Italian Budget.—The Italian budget for 1914-15 estimates the receipts at $521,409,379, and the expenditures at $516,856,509, as compared with estimated receipts of $505,646,683, and expenditures of $498,840,345, in 1913-14.

* * *

Mine Workers in France.—According to the report issued by the Commission Supérieure du Travail on mine and quarry inspection in 1912, the number of persons employed in the 38,551 mines and quarries of France was 375,240. including 331,414 adults and 43,667 boys and girls. This is an increase of 692, of which 533 were children and 159 adults.

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

MARINE insurance, in spite of the fact that the magnitude of its operations is greater than that of any other form of insurance except fire insurance, is as a rule the least ostentatious of all the insurances. It has a province all its own, about which the generality of people, even in the insurance business, know virtually nothing. Merchants as a class, leaving out of account the large scale exporters and importers, are totally ignorant of it. The newspapers speak of it only when some startling disaster at sea brings it momentarily "into the news," and then in a collateral rather than principal rôle. But during the week just past marine insurance has had what the French would call *sa revanche*, its revenge, its turn, its hour of glory. It has become not merely a factor, but for the time being a master in the great complex of international finance. It has taken a hand in the vast conflict which the nations of Europe seem at this writing to be about to be engaged in, will they, nill they. It has intervened between the great financial markets of the Old World, all bent on securing money for their securities of every kind, and the financial markets of the New World which have as yet remained free and open to all comers. The unanimity of desire on the part of panic-stricken holders of securities abroad to take advantage of these resolute securities markets in the United States has been decidedly chilled by the discovery that marine insurance has decidedly to be reckoned with in the matter of getting hold of the money realized for the securities sold. Had it not been for the high war-risk rate (½ per cent) charged by the marine underwriters upon gold for shipment to Europe, and still more for the positive refusal of the underwriters to have more than limited risks on single steamers, it is certain that the out-flow of gold from the United States during the past few days would have been in such volume as probably to throw both our bankers and our security markets into a state of panic rivaling the despair abroad, and also to produce very unfavorable results in all our industry and commerce. How desperate has been the demand for gold for shipment abroad is shown by the absolutely unprecedented figures to which foreign exchange in the form of cable transfers has gone. On Friday afternon, cable transfers to London were quoted in New York nominally at $6.00, instead of the theoretical par of $4.87½ to $4.88, per pound sterling,—meaning a loss of 22 per cent to the remitter; and even at this price cable transfers were virtually unobtainable. It was not that there was any lack of gold in New York for shipment, but that marine underwriters would not take at any price further risks on gold for steamers sailing within the next week or ten days. They had in mind that section of the Hague Convention of 1907, which enumerates articles called "conditional contraband of war," and which reads as follows: "The following articles susceptible of use in war may without notice be treated as contraband of war, under the name of conditional contraband of war—gold and silver in coin or bullion; paper money." Hence the high war-risk premium charged; and hence the stern limitation of the amounts at risk on single ships, to say nothing of the total refusal to take any risks at all on ships flying the Austrian flag and the virtual impossibility of finding underwriters for gold on ships flying the Italian, Greek or Russian flags. Thus one of the generally uncounted elements of cost in foreign financial transactions became practicaliy governing and a substantial check was interposed against the free use of the open American markets for the sale of foreign-held securities and against the resulting inordinate drain upon our stock of gold. Of course the phenomena attendant upon the shipment of gold similarly affected the shipment of commodities, like cotton, upon which the marine insurance rates became virtually prohibitive on Thursday last. This is decidedly to the disadvantage of the United States, as the easiest way for us to pay for the securities sold back to us by Europe is through the credits derived by us from the delivery of our commodities to foreign buyers. None the less, it may be fairly said at the moment that the most efficient protection we have for our stock of gold is the difficulty, as well as the cost, of obtaining marine insurance upon it.

THE new plan of the Metropolitan Life Insurance Company, outlined elsewhere in this paper, to undertake the writing of workmen's, or industrial, disability insurance is all the more interesting because it is the first attempt, so far as we know, in this country to develop on a dependable insurance basis a form of social insurance which is a regular part of the scheme of workingclass insurance in Germany, and other foreign countries,—notably England. There is, to be sure, this great difference that in the countries abroad disability insurance is generally compulsory for all workers whose earnings fall below a certain moderate amount. The way was blazed for disability insurance, as it was for sickness insurance and for accident insurance, by voluntary associations of individuals, like the *Knappschaften*, or miners' associations, in Germany and the Friendly Societies in England. The trouble with these voluntary associations, however, proved to be that their membership was far from including the general body of workers, even in given fields. Many of the workers most in need of the protection of such insurance remained outside it, whether from lack of thrift and determination to provide for the future, or from failure to be brought into sufficiently close touch with the associations to be convinced of their advantages. Hence the way of compulsion by the State was adopted, first by Germany, then by a long list of other countries. In the United States, on the other hand, social insurance was almost an unknown thing until the introduction of workmen's compensation some three or four years since. In a narrow sense and very sporadically we have had sickness insurance, sometimes combined with a limited kind of disability insurance, in the sickness funds of a few commercial and industrial establishments. Here, though, there has generally been lacking a sound insurance basis, and more than once the contributions of employes to these sickness funds have been totally lost through the failure of the establishments maintaining them. It is unnecessary to say that whatever the Metropolitan does in this direction will rest upon a sound technical basis and will be just as dependable as any other insurance written by the company. At first, the application of the plan is to be restricted to groups of workers in single establishments, whose premiums will probably be paid predominantly by their employers,—though provision is to be made for a division of the premium payments between employers and employes, or for their payment by the employes alone. It is to be hoped, however, that ultimately the programme will reach much beyond determinate industrial and commercial groups, being opened to as many millions of workers of all kinds as are reached by the Metropolitan's industrial insurance proper.

A MEDICAL REVIEW OF THE BRITISH WORKMEN'S COMPENSATION ACT

By F. H. Westmacott, F. R. C. S.*

I HAVE been invited by your Committee to give you a short address on some subject of interest to the insurance world, and I have chosen to speak of the Workmen's Compensation Act—chiefly because I have been associated with its medical aspect from the commencement.

The Act has presented many difficulties, apart from its medical problems, such as the rate for premiums in all the diverse trades and occupations of men and women and the schedule of industrial diseases, which have been from time to time re-adjusted; you are no doubt much more familiar with these problems, essentially ones of finance and organization, than I am. I am interested in the medical side of the subject and its relation to the question of dealing with, and settling of claims under the Act, with fairness to the employed, and the representative of the employer; for surely there cannot be a large number of employers who are foolish enough to undertake their own burden of the risk, unless it is a large industrial company or corporation.

First of all we may consider the workman for whose benefit the Act was originally framed, and here I refer to both Acts of Parliament, which differ only in detail and extent of application.

Before 1897, a workman who was injured at his trade or occupation, ceased to draw his wages when he met with an injury, until such time as he was able to resume work. Most workmen who were "worth their salt," received compassionate treatment by the employer—he may have had part, or in many cases the whole of his wages paid to him after injury, or during sickness. He frequently had the doctor's bill paid for him, or received benefit at the hospitals. No doubt some cases of hardship did occur, but they were more the exception than the rule. Why then was a change necessary? I attribute it to two main causes, apart from a political design to gain votes. In the first place, I would suggest that the desire was to get something for the worker during his incapacity by a tax on industry, in deference to the feeling of the industrial classes that they must have "rights" not "doles." These are always willing to accept benefits in money, or kind, but you must not call it "charity" or a "voluntary gift;" it must be clearly understood, and recognized by you, as the right of the recipient to your excess of wealth, which you can be induced to part with; and further to bring all workers on a level of treatment. Secondly and mainly I think, owing to the passing of the individual employer, who had a personal interest in the employe, knew his name, and frequently his wife and family; and the advent of the combine, trust, corporation, and limited company, when each worker, from the manager downwards, becomes a mere cypher in the concern, and is only of use to the body corporate, so long as he can render service for payment; when that service ceases, remuneration stops.

There are those of us, however, who consider the range of employment covered is not as it should be—the inclusion of the domestic servant in the scope of the Act was a mistake, and was the first step in the break of the family tie engendered by domestic service. This has unfortunately been much accentuated by the [illegible] division of domestic servants in the National Health Insurance Act, causing irritation to the servant, the employer, and the family practitioner, one of the chief reasons given by many doctors for going on the panel being the necessity for attendance on domestics by a panel doctor, and the fear of intrusion by a fellow practitioner into the family circle by this means if he is not on the panel. But this is digression.

There can be no doubt that the inclusion of dangerous trades and industrial diseases is inevitable in compensation for incapacity from injury "arising out of and in the course of" the employment.

This brings me to an interesting point in the working of this Act—many are the decisions which have been given as to what is meant by the latter phrase. There is, however, a tendency of the County Court Judge to stretch a point in favour of the workman. E. g., a girl was dismissed from her temporary employment, and on Friday proceeded to the mill to receive the wages due to her according to custom. Having received them, she slipped on leaving the premises, and hurt her back. It was held by the Court of Appeal that the accident "arose out of and in the course of the employment," and had reference solely to the employment down to the Wednesday on which she was dismissed—(Riley v. Holland & Sons, Ltd., 1911, I. K. B., 1029). Again, a boy employed in the cardroom of a mill was told by the carder to go and fetch his dinner from the cardroom kitchen. The boy did so and was injured on the way back. It was held that the accident "arose out of and in the course of his employment," although he was off duty at the time, and this was not part of his duty; his duty however was to obey the carder.

From the medical point of view it is not always easy or possible to determine when an injury or disease "arises out of and in the course of the employment." So much depends upon a truthful account of the history of the disease.

April 21, 1908—Journeyman butcher. W. A., 20/—. A man is thrown out of a dogcart or trap, and sustained a scalp wound, and returned to work on May 4, 1908—full amount of compensation paid—5 8. Lost no time between April, 1908, and April, 1913. No fracture of skull in 1908.

17 7 13. Dr. Bowers says:—Admitted to ear hospital on April 22, 1913, with bleeding from ear; curetted on May 6, and mastoid operation: found an angromatous growth—mastoid. Afterwards got malignant endocarditis and dies on May 22, 1913, caused by aural suppuration.

One point which I wish to lay stress upon later, is of the utmost importance in coming to a just and equitable opinion,—the necessity of an early investigation by a competent medical authority of the nature of the injury, and the circumstances that led up to the same. An illustration of such a difficulty, is a case I was recently engaged in, which came before the County Court Judge, sitting as arbitrator. A man of sixty-two years was engaged in removing some furniture and in the course of the work he was standing upon a wood shed roof which gave way. He fell upon the upright wall of the shed with his legs upon either side, and sustained a contusion or bruising in the perinaeum and the upper part of the inside of the thighs. A fortnight later he was told by his doctor he had a rupture, and he ordered him a truss. The man stated that the "lump" had only been once seen by himself, and that was a fortnight after the accident. I could find no evidence of hernia five weeks after the accident, and as there was a passage, on each side of the groin, somewhat large, I was of opinion that if there had been a hernia, it was not produced by the accident, and was of old standing. He was, however, fit to resume work. I suggested a medical assessor should sit with the Judge, and at the hearing the assessor advised the Judge that he could find no evidence of hernia, and that his condition was consistent with age, and he was not incapacitated by the accident. The benefit of examination even five weeks after the accident enabled me to conclude there was no hernia, as it could not have healed in that time—nor could it have appeared a fortnight after the accident if it had been produced by it. But immediately after the accident I could have been

*A paper read before the Insurance Institute of Manchester, England.

definite. Compensation was stopped forthwith, and as a result of the hearing four months later an award for the respondent was given.

One of the most marked features of the Workmen's Compensation Act has been the extravagant increase in the time taken for recovery after injury; not only is the recorded average for healing (as given in the text books) exceeded, but I have had a sufficiently long acquaintance with injuries to be able to compare the two phases. I had some years' experience of resident hospital work; and one, of three years, at the convalescent hospital of the Manchester Royal Infirmary, was invaluable for observation of "after treatment" progress, and results of injury. I have observed that the period of time during which recovery takes place has been increased three and four-fold—for example, such injuries as are frequently met with—fractures of legs, arms, ribs and collar bones, may be compared.

	Formerly.	Present Day.
Collar bone	4 weeks	Three months.
Arm (humerus)	4-5 weeks	Three months.
Forearm	4 weeks	Two to four months.
If near wrist	6 weeks	Five or six months.
Ribs	3-4 weeks	Three months.
Femur	8 weeks	Twelve months or more.
Leg (tibia)	6 weeks	Three to four months.
Potts fracture	6 weeks	Six months.

Other injuries run in the same proportion, but the most striking of all are the injuries of the muscles of the lower part of the back and the slight concussion of the brain or scalp wounds. This is apart from the new manifestation amongst workmen and women called neurasthenia or traumatic neurasthenia, which, as has been truly stated, has been created in the working class by this Act, just as railway spine was created in the higher grades of society, when compensation for injury in railway collisions became fashionable. I never remember seeing the train of symptoms known as neurasthenia after injury, when there was no monetary value in it. Is it due to higher education producing a more sensitive organism or a greater dramatic instinct—for surely the aptitude to "get up the part" is remarkable after accidents. But really if higher education and an increased sensitive organism is responsible, it appears to have been evolved at the expense of spartan heroism, and frequently of self-respect. It is not "the thing" now to "grin and bear" after injury, but to "claim," and "slack it." Ignorance and fear of placing himself in a false position, and losing the right to compensation has been blamed for lack of initiative in resuming employment, but I believe that cunning and "greed of gain" "en masse" is nearer the mark; for how often does the apparently innocent victim of disaster turn out on discussion to be a veritable "sea lawyer" and encyclopedia of legal terms.

When I come to the subject of malingering, I am treading on delicate ground and approach the pivot on which the table of rates revolves, for is it not a fact that the malingerer is responsible for the excessive expenditure in settling claims in all trades? It costs as much, if not more, to fight him as it does to arrange the payment of a "lump sum" to get rid of the claim. The malingerer has been know from time immemorial. Special treatment has been meted out to him in the army and navy, and in civil actions for damages he has paid the penalty by penal servitude, as in the case of Josephs and the L. & Y. R. But there are degrees of malingering as there are various classes of liars. There is the personification of the "terminological inexactitude" ranging up to the skilled witness. The exaggeration of symptoms of some minor complaint, to the studied simulation of serious disease, which almost baffles the skill of the psychological student. Suggestion affects the mind so much that it is only necessary to repeat a thought often enough to produce a permanent impression of fact. Auto-suggestion is more impressive than external influence. The nomadic fakirs of India produce withering of limbs from disuse, under the influence of religious fanaticism. One can even suggest to oneself that tobacco and alcohol or sugar in tea are poison to us with such persistence that we may give them up and loathe them. The "fixed mental state" exhibited by many injured workmen is the result of continuous or repeated impressions upon the mind of a thought of their inability to do some form of work. The extreme type of malingerer is fortunately rare, and the number of cases rapidly increases as we approach the border line of real physical disability of low degree. The intensive type of malingerer is the one who has studied and been coached in the syptoms of some complicated disease, and it is only by observation and scientific investigation that the flaw can be detected, but many novel tests, and more particularly those relating to electricity have been employed. The nervous and muscular systems are subject to definite laws in health and disease, and the so-called electrical re-actions are constant factors. Other tests are made by means of tricks played upon the unsuspecting individual. To describe these, however, would spoil the market.

By far the largest class of deceivers is the one where there is an absence of effort to use a limb, or respond to a reasonable request to perform certain movements. The excuse in most cases is that such movements produce pain, and in others that the part is "weak." I look forward to the day when a "painometer" or "dolorimeter" will be invented—an instrument which will record pain by means of wireless telepathy upon a sensitive medium and registered by a revolving drum.

A certain percentage of people suffer from "ergophobia" or an inherent aversion to work; and any excuse is good enough to intensify the condition pre-existing in the individual. This is doubtless due to a bacillus related to that of laziness said to have been isolated by pathologists.

The disease can be induced by predisposing causes which may be attributed to the act itself. In a slight form it may be produced by a minor injury to get a holiday for two or three weeks. There is no pay for the first week if the incapacity lasts less than two weeks, but if he can tide over the three weeks he gets three weeks' half wages. Half wages for no work is too strong a temptation for many, and they will thrive on it indefinitely, and half-a-loaf is better than a whole one when the appetite is poor. In more serious injuries which incapacitate for weeks or months, is there not the rising, on the horizon of the imagination, of that glorious luminary the golden "lump sum," which will enable the recipient to avoid the monotonous drudgery of the daily task, and to live in ease and comfort as the independent proprietor of a small business; although without any experience, he deems himself quite capable. He is frequently stimulated in this desire by the careful nurture of his rapidly ageing parent who wishes to provide himself with an economic position in his declining years. In a great many cases I firmly believe this vision to be the predominant feature in the lack of incentive to return to the old job, and it is very questionable whether the lump sum is of real benefit to injured workpeople, however convenient it may be for the insurance company to get rid of a claim from the annual return of "outstanding claims" in the balance sheet. Ignorance and prejudice, however, may be said to account for a lot of people not resuming work, and racial characteristics play an important part. Irish workmen are notoriously difficult to encourage to return to their labors. They are always so depressed about their never being fit to work again and bemoan their hard luck in not being able to work, because nothing would ever induce them to walk about the streets if they were only fit to go back to work. In some cases this is so marked that one is impelled to agree with Shakespeare, "methinks he doth protest too

people" to be honest in his convictions. The man who is now anxious to try work if you will only tell him what he may, and can do, is generally the man who shakes his head dolefully at every suggestion in the effort to oblige him, and who goes forth to another week of abject wretchedness on half the weekly earnings. My own experience leads me to believe that a very large number of cases of "nervous debility" are not due to the accident but solely and entirely to digestive troubles. Absence of regular manual labour induces sluggishness of bowels and indigestion, the symptoms of which are innumerable, from headache to cold feet. Constipation causes toxoemia, and the more rest and inactivity, with overfeeding to strengthen them, the worse the condition becomes. It is very difficult to persuade them that the cause of their troubles is want of work and a healthy appetite. This is another reason why work is beneficial. On the other hand there are certainly instances of starvation causing incapacity, where a breadwinner of a family denies himself for his wife and children.

One must not overlook the club money as a deterrent to physical exertion, but I fear the National Health Insurance will prevent in the future so much money being received, as it is not payable like the old club money—when in receipt of weekly compensation.

Again the wage-earning wife may fill the gap and satisfy an injured workman that there is no immediate hurry to become the toiler for bread. A case at Stalybridge, in which I was interested, is instructive. A man sustained a fractured femur, and was fortunate in getting a perfect union, and was quite content to let well alone on 15/- per week for twelve months. It was then discovered that his wife kept a small hand laundry, and even a reduction to 2/6 per week was not sufficient pressure to make him go back to work. He would not settle, and it was necessary to apply for a review, which resulted in a nominal penny a week award. This was not enough, and a settlement was effected to dispose of the claim.

There is a widespread feeling among workmen that compensation for injury must be paid, and that they must not return to work until the limb is in exactly the same condition as before the accident. Any alteration in shape or loss of complete function is quite enough to prevent any attempt at work, and they expect compensation for this, as well as for incapacity to earn. One is frequently told that the loss of a part of a finger is absolutely fatal to their ever resuming their old work, and that that special finger on that hand is the only part of the human frame that is necessary for their particular work even though the next man may declare that the opposite limb is his vital part for the same job.

The medical adviser to the employer is frequently puzzled by the technical nature of a man's hand—in mills and workshops. However much he may know of the medical aspect of functions of limbs, there is the technical skill required for different kinds of work that he is not always in a position to judge of.

The position of the employer is one of difficulty at times. He is bound under his insurance policy to give every assistance to the company in dealing with the injured workmen, and he frequently cannot find so-called light employment in a business or trade which is entirely of a heavy nature. I believe on the whole employers are not resentful, and do their best for injured workmen, especially in proprietary concerns, but combines and trusts are not by nature sympathetic. Too often, however, an injured workman presumes on his position of a free lance on the premises and becomes either insolent or a source of annoyance to employer and overlookers or foremen, until the strain causes a rupture, and back the man goes on his compensation.

I am sorry to say that all too frequently the fellow workmen resent the cripple amongst them, and the helping along of the "lame duck" which was the rule before the Act of 1906, is now a thing of the past. The spirit of the combine has percolated to the workpeople. This is a serious and unfortunate position because the injured workman will be in a fit condition to resume work earlier and be better mentally for gradually increasing work at his trade encouraged by his comrades than in any temporary idling about a place of work in fictitious occupation.

The medical service rendered in carrying out the Act is somewhat uneven in its application, and not always given its proper place in administration. There are many cases which could be settled by expert medical opinion without any legal technicalities, and such cases I would refer to a court of medical assessors whose decision on the question of capacity to earn should be final. They should take medical evidence on the history of the case into account, together with their own examination and information as to the technical nature of the work. The reference should be by the judge or by mutual consent.

As a rule the employer is able to engage surgeons of standing and experience in dealing with claims, but the workman has to rely on his own medical attendant who has not had the same experience of surgery, and who is not as a rule so expert in arranging his facts and opinions and for which he is not adequately paid. The workman can only engage experienced surgeons when supported by a trades union. At the same time every possible latitude is given to a workman, and his word is frequently accepted without medical evidence in support. In fact so much encouragement is given to the man that perjury is frequently committed, but is not followed by its legal punishment except in the rarest incidences.

Many difficulties arise in exact diagnosis, and the borderline between injury and disease is often indefinable. This is particularly so in the schedule of diseases in dangerous trades.

What are the remedies which may reasonably be expected to reduce the excessive claim ratio and leave a margin of profit to the accident department of insurance work? First and foremost I would suggest a complete revision of the medical inspection of claims. In many instances it is absolutely necessary that an expert examiner should investigate the injury and accident at the earliest possible moment, failing which it is impossible to dispute liability. Two instances of this occurred in my experience in one day at Wrexham. The first was a claim made by a widow of a man who was stated to have strained his heart by jumping out of a railway coal truck on to a heap of slack. The man died in a few days, and the certificate of the doctor in attendance on the case stated the cause of illness to be "malignant endocarditis." This was in the hands of the insurance company for some days before death and no further notice was taken of it. Malignant endocarditis is a disease caused by septic poisoning and not by a strain, but no refutation of claim was possible, and an award for £150 was made. The next case was that of a man who died suddenly of excitement on a football field nine months after he had resumed work as a "coke drawer," a heavy occupation. He had been off work with a stiff neck some three weeks, said to have been brought on by a strain. A post-mortem was made privately by a doctor for the coroner, and he stated there was a dislocation of the axis vertebra in the neck due to weakness produced by stretched ligaments arising from the alleged injury nine months before. The evidence was unsatisfactory but irrefutable, and an award was given for £150. If this case had been carefully investigated in the early period of incapacity a correct estimate of the state of the neck would have been obtained and money saved. Thousands of pounds are wasted every year on this ground.

Every insurance company or combine might employ a medical referee in chief at a salary of about £2,000 per annum in order to attract surgeons of wide experience. He should devote his whole

time to the work and supervise all claims sent in. To facilitate the selection a scheduled table should be drawn up and printed for use in every office of the company, and should be in the hands of all claims' inspectors. This table would set out the classification of injuries into three main categories according to their import, with a detailed list of the commoner forms of injury in each. (a) Minor injuries, neither serious in themselves nor likely to develop into further trouble. To be investigated by a claims' inspector and reported on at once. Such report to be submitted to the medical adviser, who would note any unusual or peculiar circumstance for further investigation and ask for information from the medical attendant. (b) Cases requiring immediate investigation by a medical man in the locality, if at a long distance from the head or branch office; with report to the chief adviser, or in other cases an examination by the company's chief adviser himself. (c) Cases requiring early and skilled investigation by the chief medical adviser, who would have power to co-opt other expert investigators such as pathologists, eye specialists, radiographers, etc.

In class (a) I should include simple fracture of collar bone, ribs, fingers, forearm, sprains of wrist, and ankle, etc. Class (b) would consist of, among other cases, compound fractures, simple fracture of bones of limbs, especially near or involving a joint, hernia, rupture of muscles, sprained back, etc., doubtful injuries or indefinite certificates. The third (c) would deal with all injuries such as "heart strain," internal injuries, head injuries, and occupation diseases.

Another important duty of a chief medical adviser would be the reviewing of all medical evidence in cases about to be the subject of arbitration, and the correlation of medical facts. He would supervise the evidence to be given by medical witnesses, for some man make bad or indifferent witnesses and lose sight of the fact that they are there to assist the Court by relation of medical history and opinion, and not to support the contention of either side in any partisan spirit. If a company was not in a position to appoint a chief adviser as suggested, it might be accomplished by several companies pooling and employing a surgeon under a joint scheme.

Finally I would offer a solution of the difficulty of resumption of labor and of light work. Colonies should be established, supported by the insurance companies, which would be equipped with all grades of physical exercise, radiant heat baths and dynamic machines to test the power of limbs. Good food would ensure good health, and all work would be prescribed to suit each individual set of muscles or joints. Careful records of progress or failure would be kept, and a financial estimate of the earning would be obtained. I firmly believe the "Kur-Anstalt" could be made more atractive by entertainments and comfortable quarters, and the moral and physical conditions of injured workpeople of both sexes would be enormously benefitted and a great deal of loafing, public park entertainments, and depression of home surroundings and brooding would be avoided.

GAINFUL OCCUPATIONS OF RESIDENTS OF THE STATE OF NEW YORK

THE new workmen's compensation law of New York gives particular interest, despite the now partial obsoleteness of the actual figures, to a bulletin recently issued by the Bureau of the Census, summarizing the gainful occupations pursued by residents of the State of New York in 1910, the year of the decennial census. The bulletin is as follows:

* * *

According to the Report on Occupations recently issued by Director William J. Harris, of the Bureau of the Census, Department of Commerce, there were 4,003,844 persons ten years of age and over in New York State engaged in gainful occupations in 1910. The gainful workers thus formed 43.9 per cent of the total population of the State (9,113,614) and 54 per cent of the population ten years of age and over (7,410,819). In 1900 the 2,996,474 gainful workers of the State formed 41.2 per cent of the total population and 51.6 per cent of the population ten years of age and over.

The male gainful workers in 1910 numbered 3,020,158, or 81 per cent, of all males ten years age and over, as compared with 2,324,429, or 80.8 per cent, in 1900. The female gainful workers in 1910 numbered 983,686, or 26.7 per cent of all females ten years of age and over, as compared with 672,045, or 23 per cent, in 1900.

The 4,003,844 gainful workers in 1910 were distributed among the main branches of occupations as follows: Agriculture, forestry, and animal husbandry, 378,657, or 9.5 per cent; extraction of minerals, 12,265, or 0.3 per cent; manufacturing and mechanical industries, 1,591,529, or 39.8 per cent; transportation, 320,480, or 8 per cent; trade, 545,359, or 13.6 per cent; public service, 67,436, or 1.7 per cent; professional service, 221,168, or 5.5 per cent; domestic and personal service, 535,894, or 13.4 per cent; and clerical occupations, 331,056, or 8.3 per cent.

Of the gainful workers in 1910, 3,020,158, or 75.4 per cent, were males and 983,686, or 24.6 per cent, females. In agriculture, forestry, and animal husbandry, the males numbered 365,602, or 96.6 per cent, and the females 13,055, or 3.4 per cent. Practically all—12,133, or 98.9 per cent—of the persons engaged in the extraction of minerals were males. In manufacturing and mechanical industries, 1,242,556, or 78.1 per cent, of the workers were males and 348,973, or 21.9 per cent, females. Males constituted 95.4 per cent of the 320,480 persons engaged in transportation, 86.1 per cent of the 545,359 persons engaged in trade, and 98.6 per cent of the 67,436 persons engaged in public service. In professional service 128,217, or 58 per cent, of the workers were males and 92,951, or 42 per cent, females, a large proportion of the females being school teachers. Domestic and personal service was the only large field of occupations in which the females outnumbered the males. Here females numbered 322,969, or 60.3 per cent, and males only 212,925, or 39.7 per cent, of the workers. Of the persons pursuing clerical occupations 216,870, or 65.5 per cent, were males and 114,186, or 34.5 per cent, females.

Of the 3,020,158 gainfully occupied males in 1910, 955,733 were native whites of native parentage, 762,994 native whites of foreign or mixed parentage, 1,244,701 foreign-born whites, 49,205 negroes, and 7,525 other colored. The proportion which the gainfully occupied males formed of all the males ten years of age and over in each principal class of the population was for native whites of native parentage, 76 per cent; for native whites of foreign or mixed parentage, 74.8 per cent; for foreign-born whites, 89.9 per cent; and for negroes, 89.2 per cent.

Of the 983,686 gainfully occupied females in 1910, 277,495 were native whites of native parentage, 317,583 native whites of foreign or mixed parentage, 353,303 foreign-born whites, 34,782 negroes, and 523 other colored. The proportion which the gainfully occupied females formed of all the females ten years of age and over in each principal class of the population was for native whites of native parentage, 21.7 per cent; for native whites of foreign or mixed parentage, 29.2 per cent; for foreign-born whites, 28.3 per cent; and for negroes, 57.3 per cent.

The gainfully occupied males in 1910 were distributed, according to age periods, as follows: Ten to thirteen years, 3,600; fourteen to fifteen years, 35,757; sixteen to twenty years, 340,441; twenty-one to forty-four year and age unknown, 1,844,857; and

forty-five years and over, 795,503. The proportion which the gainfully occupied males formed of all males in each age period was: For those ten to thirteen years of age, 1.1 per cent; for those fourteen to fifteen years of age, 23.5 per cent; for those sixteen ot twenty years of age, 80.1 per cent; for those twenty-one to forty-four years of age, 96.9 per cent—that is, all but three men in every 100 had gainful occupations—and for those forty-five years of age and over, 85.3 per cent.

The gainfully occupied females in 1910 were distributed, according to age periods, as follows: Ten to thirteen years, 1,252; fourteen to fifteen years, 24,485; sixteen to twenty years, 259,940; twenty-one to forty-four years and age unknown, 552,642; and forty-five years and over, 145,367. The proportion which the gainfully occupied females formed of all females in each age period was: For those ten to thirteen years of age, 0.4 per cent; for those fourteen to fifteen years of age, 15.9 per cent; for those sixteen to twenty years of age, 56.6 per cent; for those twenty-one to forty-four years of age, 30.4 per cent; and for those forty-five years of age and over, 15.5 per cent.

In New York in 1910 there were 39,357 males and 25,737 females ten to fifteen years of age engaged in gainful occupations; or, stated otherwise, 8.4 per cent of the males and 5.5 per cent of the females ten to fifteen years of age were gainful workers. In 1900 there were 55,218 males and 36,726 females ten to fifteen years of age engaged in gainful occupations, which was 14.4 per cent of all males and 9.5 per cent of all females ten to fifteen years of age.

The principal occupations followed by the males and the females, respectively, in New York in 1910 were as follows:

MALES.

Agents, canvassers and collectors	12,504
Apprentices	14,652
Bakers	18,370
Barbers, hairdressers and manicurists	25,002
Bartenders	19,732
Blacksmiths	21,473
Bookkeepers, cashiers and accountants	50,586
Brick and stone masons	23,360
Builders and building contractors	25,921

The Efficiency of Lightning Rods.—According to a bulletin of the Ontario Department of Agriculture, thirteen years of investigations demonstrate that lightning rods are now 94½ per cent efficient in that Province. In the State of Iowa they are 98.7 per cent efficient, and in Michigan 99.9 per cent. Total lightning claims paid by insurance companies on rodded buildings in Iowa during eight years were only $4,464, while on unrodded buildings, which were of the same number, they paid $341,065. In Ontario, out of every 200 farm buildings insured, forty-two are rodded. Yet out of every 200 struck by lightning in 1912, only three were rodded buildings. According to the Ontario bulletin, the rods should be in metallic connection with the building

NOTES ON INSURANCE, AMERICAN AND FOREIGN

To Write Industrial Disability Insurance.—In a letter to its Superintendents, the Metropolitan Life Insurance Company of New York announces the practical completion of a plan to write industrial disability insurance, although for the present on the group plan only. The letter reads:

"In a public announcement made by the Metropolitan Life Insurance Company in 1909, it was stated that if the demand could be shown and the feasibility demonstrated, the company would attempt to provide insurance against disability due to sickness or accident. In conformity with this statement and in realization of the need for such insurance, the company since the above date has made careful studies of the subject in Europe and in the United States. The results of these studies convinced the officers and directors of the company that the time is opportune for the development of a comprehensive form of disability insurance in the United States, to meet in particular the needs of working men and women.

"An amendment to the insurance law was procured under which our charter could be enlarged. Thereafter the charter was amended and our license has been extended to enable the company to write disability insurance.

"While the results of the studies which have been made in foreign countries with respect to disability insurance have been illuminating, the difficulty which the company has encountered is to find an experience that could be used in the United States. Unfortunately, there are no accurate statistics obtainable. For this reason, the company in the preparation of its tables has had to depend upon the experience of other countries and to adjust these to meet American conditions. It is impossible to say in advance whether these premiums are too high or too low, but it is believed that a sufficient margin has been allowed to permit the company to conduct its business on a safe basis and yet not to charge more for this form of insurance than is actually required. If, in the course of years, experience demonstrates that the rates are too high or too low, they will be changed. The company has no intention to make profit out of the business, but wishes if possible to give disability insurance to the working classes of the United States approximately at cost.

"The present plans of the company contemplate group insurance only. Contracts will be entered into with employers of labor for the insurance of their employes against sicknees and against accidental injuries not arising out of and in course of their employment (industrial accidents being covered in many States by the Workmen's Compensation Laws), the premiums to be paid either by the employer, by the employer and the employes jointly, or by the employes alone.

"To develop this new form of insurance, a new department has been created, to be known as the Disability Insurance Department. The officer in charge will be the Sixth Vice-President, who will pay especial attention to the field work. The Home Office force and work will be in charge of Assistant Secretary Thornton R. Richardson and under the supervision of the Third Vice-President, who already has such supervision in the Ordinary and Industrial Departments.

"Together with this preliminary announcement, we are enclosing a specimen copy of the new policy, which has been approved by the Insurance Department of New York. Under this policy, no benefit is payable for the first seven days of incapacity, nor for the first thirteen weeks of insurance. The benefits are divided into three periods. During the first twenty-six weeks, full benefit will be paid. During the second period of four years and six months, one-half benefit will be paid. During the third period, running to age sixty-five, one-quarter benefit will be paid. In the two last mentioned respects, the policy differs radically from disability policies issued by other companies.

"In due course, full detailed information regarding this policy and rates of premiums will be sent to you."

Mr. Done's Valedictory.—Concluding his annual report as Commissioner of Insurance of Utah, for 1913, Willard Done says: "From time to time the Commissioner has called attention to great movements in insurance history as they have arisen. It seems certain that the greatest movement now on foot is that for education and conservation. In that work the Utah Commissioner has been active in the past and he leaves this field now to devote his entire time to this line of endeavor. The education of the public regarding insurance itself and the closely related subject of conservation is of paramount importance. It is believed that more benefit can be and will be derived from this work than from any other that can be undertaken. Every State is interested in such a movement, and the people of every State as well as the insurance companies operating therein will enjoy its benefits. To the State of Utah which will be in my future field, I pledge my best efforts to secure beneficial results from this work. The people of Utah are taking a very intelligent interest in the subject of insurance, which interest it is hoped will be increased and will be reflected in greater saving of life and property, and a friendly co-operation with insurance companies and their representatives in bringng about needed reforms. As everyone is interested in insurance, so everyone should know something about it."

* * *

South African Mine Accidents.—In the mines of South Africa, in 1912, by accident, 69 white men were killed, and, of colored, 962; of whites, 359 were injured and 2,300 colored. In 1913, the corresponding figures were 88, 923, 360 and 2,508.

* * *

Marine Insurance in France.—According to statistics published in "L'Argus" the premiums received in 1913 by the principal French marine insurance companies exceeded those of 1912 by 679,811 francs. The claims amounted to 71.05 per cent of the premiums as compared with 72.04 per cent in 1912. The management and agency expenses of the companies collectively amounted to 6,547,530 francs.

* * *

Additions to the Health Conservation Committee.—Mr. Elmer E. Rittenhouse, chairman of the Health Conservation Committee of the World's Insurance Congress, has nominated the following additional members to his committee, and the appointments have been confirmed by the commission in charge of the World's Insurance Congress events: Dr. F. L. Hoffman, statistician, Prudential Insurance Company of America, Newark, N. J.; Dr. Franklin C. Wells, senior medical director, Equitable Life Assurance Society of New York; Dr. H. W. Cook, vice-president and medical director, Northwestern National Life Insurance Company, Minneapolis, Minn.; R. W. Huntington, Jr., president, Connecticut General Life Insurance Company of Hartford; Wilmer L. Moore, president, Southern States Life Insurance Company of Atlanta.

* * *

English Underwriters to Attend Insurance Congress.—The Hon. Henry L. Riseley, a prominent insurance underwriter of Bristol, England, passed through San Francisco en route home from Australia. He was the chairman of the International Convention of

Insurance Agents and Brokers, held at London in 1913. He has accepted an invitation to head a delegation from England to the World's Insurance Congress, to be held in San Francisco in 1915.

* * *

Life Underwriters Programme.—The programme of the twenty-fifth annual convention of the National Association of Life Underwriters, to be held in Cincinnati on September 15, 16 and 17, has been issued as follows:

TUESDAY, SEPTEMBER 15, 1914.—MORNING SESSION, 10 O'CLOCK.

Invocation.
Addresses of Welcome:
Mr. John L. Shuff, president Cincinnati Life Underwriters' Association.
Mr. Jesse R. Clark, president Union Central Life Insurance Company.
Roll call of delegates.
Reading of minutes of previous convention.
Reading of special communications.
President's address.
Vice-President's address.
Secretary's report.
Treasurer's report.
Executive Committee report.
Announcements.

AFTERNOON SESSION, 2 O'CLOCK.

Address—"Life Insurance Education."
Dr. S. S. Huebner, Professor of Insurance and Commerce, Wharton School of Finance and Commerce, University of Pennsylvania.
Report of Committee on Education and Conservation.
Mr. Warren M. Horner, chairman.
Five-minute talks—
"Work Accomplished by Local Associations."
(a) Education.
(b) Publicity.
Question from the Floor.
Action on Executive Committee's recommendations.
Appointment of Nominating Committee.

WEDNESDAY, SEPTEMBER 16, 1914.—MORNING SESSION, 10 O'CLOCK.

Address—"The Taxation of Life Insurance."
Hon. Lawrence Y. Sherman, member United States Senate from Illinois.
Report of Committee on Taxation.
Mr. Edward A. Woods, chairman.
Discussion of five-minute topics—
Mr. Hubert H. Ward, manager, Pacific Northwest, Pacific Mutual Life Insurance Company, Portland, Oregon, chairman:
"Necessity for Action in Matters of Insurance Legislation by Life Underwriters Associations."
Announcement and reading of prize essays—
"Woman's Interest and Influence in Life Insurance."
Presentation of Calef Loving Cup and Medal.
Presentation of Ben Williams Vase.
New Business.

AFTERNOON SESSION, 2 O'CLOCK.

Discussion of five-minute topics—
Mr. Hubert H. Ward, chairman.
1. "Agency System."
(a) Standards of Qualification for Agents.
(b) The Training of Agents.
(c) Proper Service to Policyholders.
(d) Time Accountability and Systematic Reports.
2. "Utilizing Life Insurance for Charitable and Philanthropic Bequests."
(a) Educational Institutions.
(b) Religious Organizations.
(c) Charities.
New Business.
Presentation of resolutions or other business to be referred under the rules to the Executive Committee.
Meeting of Nominating Committee, Hotel Gibson, 10 p. m.

THURSDAY, SEPTEMBER 17, 1914.—MORNING SESSION, 10 O'CLOCK.

Report of Executive Committee.
Address—
(Name and subject to be announced later.)
Five-minute topics—
Mr. Hubert H. Ward, chairman.
"Business Insurance."
Discussion to be led by Mr. Lawrence C. Woods, assistant manager, Equitable Life Assurance Society at Pittsburgh, Pa., who will be given twenty minutes, after which the five-minute discussion of the topic will prevail.
Announcements.

AFTERNOON SESSION, 2 O'CLOCK.

Ten-minute reports on—
"The Northwest Insurance Congress," Malcolm Hughes, Seattle, Wash.
"The New England Congress," Clarence C. Miller, Boston, Mass.
Awarding of trophies—
The Edwards Membership Trophy.
The Whittington Delegates' Trophy.
The Waite Attendance Trophy.
Selection of place for holding convention in 1915.
Report of Nominating Committee.
Election and Installation of Officers.
Unfinished business.
Adjournment.

* * *

Mutual Life Underwriters' Programme.—The programme of the second annual convention of the National Association of Mutual Life Underwriters, to be held at Mackinac Island, Michigan, on August 10 and 11, has been issued as follows:

FIRST DAY.

MONDAY, AUGUST 10, 1914.—MORNING, 10 O'CLOCK.

Address of President—Nelson O. Tiffany, president of Masonic Life Association, Buffalo, N. Y.
"A Psychological Opportunity"—M. F. Van Buskirk, editor Mutual Underwriter and Fraternal Monitor, Rochester, N. Y.
"Valuation as Applied to Assessment Associations"—Lewis A. Anderson, actuary, Fellow American Institute of Actuaries, International Congress of Actuaries; lecturer, University of Wisconsin, etc., Madison, Wis.
"Legislation Problems"—John Sullivan, member, Committee on National and State Legislation of the National Fraternal Congress of America.

AFTERNOON, 2 O'CLOCK.

Report of Executive Committee—F. J. Kuhlemeier, chairman, secretary Merchants Life Association, Burlington, Iowa.
Report of Committee on Legislation—Nelson O Tiffany, Jr., chairman, vice-president and superintendent of agencies, Masonic Life Association, Buffalo, N. Y.
Report of Committee on Statistics and Publicity—Nelson O. Tiffany, Jr., Buffalo, N. Y.
Report of Treasurer—Arthur J. Davies, secretary Knights Templar and Masonic Mutual Aid Association, Cincinnati, Ohio.
"Pure Protection Life Insurance"—Dr. George W. Hopkins, president Pure Protection Life Association, Cleveland, Ohio.
"Uniform Insurance Law"—Edward M. Martin, vice-president Guarantee Fund Life Association, Omaha, Neb.
"Mutual Life Underwriters—What of the Future?"—S. S. Hallam, general manager Illinois Bankers' Life Association, Monmouth, Ill.
"World's Insurance Congress"—Gilbert F. Stevenson, secretary Western Mutual Life Association, Los Angeles, Cal.
"Co-operation"—J. C. Peasley, secretary Bankers' Reserve Life Association, Freeport, Ill.
Executive session.

SECOND DAY.

TUESDAY MORNING, AUGUST 11, 9 O'CLOCK.

General discussion.
Adjournment, 11:30 a. m.

* * *

Co-operative Disability and Life Insurance for Metropolitan Life Employes.—The Metropolitan Life Insurance Company of New York announces details of its plan to furnish co-operative disability insurance coupled with low cost life insurance to its employes as follows:

"The Metropolitan offers to all its employes in the field (superintendents excepted) who have been in the employ of the company over six months and are not over sixty years of age, a plan under which they can be assured of a weekly income in the event of disability due to sickness or bodily injury, and of the payment to their heirs, in the event of death, of a substantial amount of monthly benefit for twelve months subsequent to date of decease. No medical examination will be required for either the life insurance (except in a very few States where statutes require such examination) or the disability insurance, but in the event of incapacity the company will examine, and will require proof of incapacity, as often as it may deem necessary.

"The amount of life insurance to be granted on any life will be fifty-two times the average weekly earnings for the first six months of 1914. For example: an agent has averaged $24 per week for the first half of 1914. He will be eligible for fifty-two times $24, or $1,248. In the event of death, the company would pay to the beneficiary $104 per month for twelve months. Assuming the insured in this case to be twenty-five years of age when this

policy was issued, the monthly premium for the first year would be 1.248 x .71, or 89 cents.

"To each employe on whose life this insurance is placed the company will also issue disability insurance, subject to the conditions of the policy when issued, at the published rates, and in every case the company will pay one-half of the disability premium on men, and on women the difference between the published cost and the sum to be paid by men for like benefit; that is, the sum to be paid by men and women will be the same.

"The weekly benefit insurable in every case will be two-thirds of the average weekly earnings for the preceding six months, taken to the nearest dollar. In the event of disability this benefit will be payable for twenty-six weeks, when one-half thereof will be payable for the next 234 weeks, when it will be again reduced to one-quarter, which will be payable up to age sixty-five. In the case already cited, the benefit will be $16 per week for twenty-six weeks, $8 for 234 weeks and $4 to age sixty-five.

"No benefit is payable for thirteen weeks subsequent to the insurance taking effect, nor for the first seven days of incapacity.

"The premiums on these insurances are to be paid on the first day of each month to the cashiers in the district offices and prompt remittances made to the company, with special report forms. * * *

"The company reserves the right to cancel the disability insurance at any time, and also reserves the right to settle any question in dispute. In the event of the cancellation of the insurance through the non-payment of premiums or otherwise, no further benefits will be paid whether incapacitated or not."

INSURANCE NEWS IN THE WEST

Would Reduce Marquette National Capital.—The Marquette National Fire of Chicago has started on the very large task of securing the consent of all its stockholders to a reduction in the capital stock from $1,000,000 to $300,000. The consent of each individual stockholder must be secured and it must be in writing. Among the hundreds of stockholders it can readily be seen there will be many who will hesitate and require long explanations and probably some who will try to make a bargain, getting some consideration for their consent. The necessity of reducing capital arose through the failure of the La Salle Street Trust and Savings Bank. Besides tying up about $400,000 in funds of the insurance company, the failure made it impossible for the bank to handle a large amount of installment notes for the company, and it also made it impossible for one of its officers to sell the last $150,000 of stock, as he had agreed to do.

* * *

Illinois Case Put Over.—The hearing on the petition for an injunction to restrain Insurance Superintendent Potts, of Illinois, from interfering with the business of the companies operating underwriters' agencies was postponed on Monday until September. Then Mr. Potts will have returned from the insurance commissioners' convention, at which he doubtless will consult with his fellow commissioners on the questions involved in this controversy. Meanwhile the companies will have secured depositions that they want to present to the court at the hearing.

* * *

Tangle in Chicago Fire Board.—For some time past the Chicago Board of Underwriters has been failing to get a quorum at meetings. Another meeting is called for the latter part of this week, and, of course, it is yet uncertain whether enough members will be on hand to transact business. It is surmised that a number of members have absented themselves in order to avoid voting upon the question of increasing brokers' commissions. The brokers, who were hit very hard by the expense reduction programme which became effective on January 1, have been endeavoring to have their commissions advanced from 10, 15 and 20 per cent to 15, 20 and 25 per cent. For an agent to oppose this increase, if any considerable number of board members favored it, would not make him popular with the brokers and might do his agency considerable harm. On the other hand, to grant the increase would reduce the incomes of agents in a way that many of them could not well stand. Hence it is not surprising that some of them desire to sidestep the issue.

Another question likely to come before the board is that of agency representation. There appears little prospect that the board will be able to enforce its present rule of not more than three agents to each company, including underwriters' agencies. This difficulty has given rise to talk of increasing the number to four, if by so doing an agreement can be reached. There are few, if any, signs that an agreement can be reached. When President Bissell, of the Hartford Fire, was here recently, it is reported he made a proposal to the effect that if the board would recognize the New York Underwriters as a separate institution he would agree not to take advantage of such action by appointing for the Hartford Fire and the New York Underwriters together more agents than are allowed to one company. Certain other companies with underwriters' agencies, however, would not agree to this; they would not consent to having the New York Underwriters recognized as a separate institution unless similar recognition was given their underwriters' agencies. It appears impossible to get an agreement. Companies without "underwriters" are not likely to concede any advantages to those with annexes; and no company seems at all inclined to admit that its "underwriting" is any less legitimate than that of any other company.

* * *

Arraigns Liability Companies.—The annual report of the Wisconsin Industrial Commission, whose year closed on June 30, is devoted in large part to arraignment of the liability companies on the score of the rates charged in that State. Pointing out differences between the New York and Wisconsin laws, the commission claims that the cost of compensation in New York exceeds that in Wisconsin by 50 per cent, and the rates should be that per cent higher in New York than in Wisconsin. Yet, it says, the rates on most classifications in New York are lower than those in Wisconsin. Intimating that possibly the companies are discriminating in favor of Eastern industry, the commission says that if the companies are charging inadequate rates in the East they should not be permitted to make good the deficit in the West. "If the stock insurance companies will not provide equitable insurance rates," says the report, "some other solution will be found. The solution may be mutual insurance or it may be State insurance."

* * *

Has Doubts About State Insurance.—State Senator Alroy S. Phillips, a member of the Missouri workmen's compensation commission, has given out a statement correcting certain misquotations of his views on the kind of a compensation law Missouri should have. He states that he did not say that he favored either a law providing for compensation insurance by the State or one providing for a State commission to administer the law with full power to regulate rates and supervise the operations of the companies. He says, however, that he did express himself in favor of State regulation of rates and supervision of the companies. Regarding State insurance, he sees no reason why employes should favor this system and several why they should not. As he views it, the only person who should favor State insurance is the employer, who would benefit by the seeming cheap rates. In Mr. Phillips' opinion

the Missouri commission should not seriously consider the subject of State insurance until there is a strong demand from the employers of the State. When it would be time enough to discuss the question of the adequacy of the coverage of State insurance, the insufficiency of its service and the other respects wherein it falls short of properly performing the functions of an insurer."

* * *

The Hartford Accident and Indemnity has not yet announced the name of its Chicago manager, but an announcement is expected within a few days. The visit of President Bissell and General Manager Moray to Chicago and the fact that they talked with several casualty and surety men of the city gave rise to rumors that one and another had been appointed manager, all of which rumors, with perhaps one exception, were necessarily incorrect. There can be little doubt, however, that the entrance of this company to the city will cause considerable rearrangement. To secure such an office staff as it will require will draw from other offices. Not being a member of the Workmen's Compensation Service Bureau, the Hartford is not bound by its rules, and can therefore appoint as many general agents as it sees fit. There is no doubt that it will be offered several opportunites to appoint individuals or firms controlling a good volume of business either as brokers or as general agents whose present connections are not entirely satisfactory. Should it take any of the latter class, that would leave other general agencies open.

* * *

Vice-President W. L. Taylor, of the Southern Surety, was in Chicago this week and he stated that the company would shortly announce the appointment of a general agent for its casualty department in the city. The company has shown no haste about entering the casualty business in Chicago, recognizing that the game is a hard one in the city and a company would better wait till it can make satisfactory arrangements.

Chicago, July 31, 1914. LA SALLE.

ITEMS OF INSURANCE NEWS.

On July 28, Chancellor Walker, of New Jersey, after hearing argument upon the report of the commission appointed to ascertain the equity of the stockholders of the Prudential Insurance Company of America in the assets of the company [The Market World and Chronicle, July 4, 1914, p. 11], approved the appraisal of the commissioners, which allows the stockholders $18,174,108.80 as their proper share of the assets. On the 40,000 shares of stock outstanding, this appraisal represents a value of about $456 per share.

During the past ten years 155 fire insurance companies in Canada and the United States have been forced to retire from the field, principally by reinsuring their liabilities with other companies. Nearly the half of these were less than five years old at the time of their retirement. Since January 1, 1913, thirty fire companies have been removed from the list, and on January 1, 1914, there were no less than seventy-two joint stock companies in the hands of the receiver, or in process of winding up.

Disablement benefit under the British Insurance Act became payable on July 13. The benefit amounts to 5s. a week, payable from the date when sickness benefit ceases—that is, after twenty-six weeks—as long as the insured person remains disabled, but not after the age of seventy, when the old-age pension begins. Only persons who have been insured for two years and have paid 104 weekly contributions are eligible for the benefit.

At a meeting of the board of directors of the Canada Life Assurance Company, Herbert C. Cox, until now president of the Imperial Life Assurance Company of Canada, was elected president and general manager of the Canada Life Assurance Company, to succeed his brother, E. W. Cox, who died in England and who succeeded his father, the late Senator George A. Cox, to the presidency only six months ago.

At the annual meeting of the Insurance Institute of London, W. E. Baily (Queen and Commercial Fire) was elected president for the ensuing year in place of Joseph Powell (Commercial Union), who retires from office. Henry Mark (Commercial Union), honorable treasurer, and G. McKay Mowat (Royal) and James A. Pollard (Alliance), honorable secretaries, were re-elected.

Succeeding H. C. Cox who was recently appointed president of the Canada Life Assurance Company, G. A. Morrow has been elected to the presidency of the Imperial Life Assurance Company of Canada. Mr. Morrow is an important figure in the financial world, being vice-president of the Dominion Securities Corporation, assistant manager of the Central Canada Loan and Savings Company and director of the British American Assurance Company, Western Assurance Company, the Canada Steel Company, the Imperial Accident and Guarantee Company and a number of other large Canadian financial institutions.

At the annual meeting of the North Dakota Association of Local Agents, the name of the organization was changed to permit of membership by casualty as well as fire agents, becoming "The Local Agents' Association of North Dakota." Thomas Baker, Jr., of Fargo, was elected president; D. M. Holmes, vice-president, and C. M. Page, secretary and treasurer.

John James has been apopinted commissioner of the Utah Insurance Department to succeed Willard Done, who has recently become connected with the Board of Fire Underwriters of the Pacific. Mr. James was general agent at Salt Lake City for the accident department of the Columbian National Life of Boston.

The Royal Life of Chicago, which has been writing ordinary and industrial life insurance, proposes to enter the health and accident field. A meeting of the stockholders has been called for August 17, to vote on increasing the capital stock to $200,000 and amending the charter to permit the additional lines.

At a recent meeting of the Insurance Brokers' Committee of the World's Insurance Congress, B. F. Brisac was elected chairman, and D. A. Spencer was elected Secretary. The rest of the members are William H. LaBoyteaux, Henry S. Manheim, M. Thompson and Edward A. Schmitt, all of San Francisco.

The New York Life had a $10,000 policy on the life of Associate Justice H. H. Lurton, of the United States Supreme Court, who died July 12. The policy, taken in 1875, contained a permit "to take occasional trips to any part of the State of Tennessee at all seasons."

The Farmers National Life Insurance Company, which was recently organized at Syracuse, N. Y., has an application pending to change its name to the Farmers and Traders Life in order to distinguish it from two Western companies of the same or similar name.

The Commercial Fire of Washington is going to withdraw from all States with the exception of New Jersey, Pennsylvania, Ohio, Indiana and Illinois, and in those States it will confine its operations to cities having fully paid fire departments.

Judge Smith McPherson in the Federal Court at Des Moines has granted an appeal from the recent decision of three Federal judges declaring the "blue sky" law unconstitutional. The decision will go to the United States Supreme Court.

The National Automatic Sprinkler Association has selected its secretary, Ira G. Hoagland, to represent it in the "National Council" of the World's Insurance Congress.

The Union Central Life has so amended its Ohio license as to permit insurance against permanent physical disability. It has also secured an amendment to its charter providing for insurance against accident and sickness.

Hail losses in Texas for the season just closed have been the lightest for many years. Some of the companies' losses have been so small as to be practically negligible, while others have run from 5 to 12½ per cent.

John J. Kennedy, manager of the accident and health department of the Cleveland Life, has been appointed chairman of the Press Committee of the International Claim Association.

The German Security Fire of Louisville, Ky., has reinsured its risks and will wind up its affairs. The business was taken over by the Boston Insurance Company.

The enactment of a fireman's pension bill and a change in the fire marshal law will increase the taxes of insurance companies in Louisiana about 1½ per cent.

Twenty-three rural municipalities in the Southern and Eastern parts of the Province of Alberta have voted to form themselves into a hail insurance district.

Australasian exchanges say that the State Ministry proposes to establish in Melbourne a State insurance office under the Workers' Compensation Act.

The Prudential Insurance Company of America has delegated Harvey Thomas, one of its supervisors, to be in charge of its publicity department.

The St. Paul Fire and Marine has increased its capital to $1,000,000 by transferring $500,000 from surplus to capital.

The National Fraternal Congress will hold its annual convention at Niagara Falls, commencing September 8.

The Standard Life of Pittsburgh will increase its capital from $350,000 to $400,000.

The Equitable Life Assurance Society was formed fifty-five years ago.

REVIEW OF THE FINANCIAL SITUATION

ANYTHING which is written at this time about the monstrous situation precipitated by Europe's mad rush toward the abyss of war has to be subject to all the qualifications that may be made by developments before it appears in print. Mankind has never faced such conditions as those which have been created this week and the train of events is being made by forces that do not lend themselves to any trustworthy conjecture. The world to-day is a vastly different community than the world of the Napoleonic wars, which furnish the only precedent for the general European warfare which has been holding out the most awful menace since a week ago. In every part of the civilized area the disastrous shock of so dreadful a catastrophe must be felt in the economic structure built out of domestic and international trade relations bound together by international banking. To what extent the disruption already sustained may go it is therefore impossible to foretell. All that one can say at this time is that it behooves American citizens to keep their heads and retain their confidence in the future of the United States and in the fundamental soundness of American values.

It now appears more clearly how certainly Europe has been preparing for the crisis which this week emerged out of the clash of Old World politics. The war clouds which made the European sky absolutely black seemed to loom up with astonishing suddenness and yet, as we intimated a week ago, there have long been tokens of an instinctive apprehension abroad that the worst might happen, together with less doubtful evidences of a deliberate and conscious effort to make ready against the most dire contingencies.

When the Balkan war broke out in 1912 all Europe shuddered with alarm because of the traditions which have taught it to regard an explosion in the Balkan powder magazine as tremendously dangerous to the whole peace of Europe. The efforts of the Powers to keep out of the earlier Balkan conflict were successful, but it seems that at no time have the European peoples really believed that the most calamitous danger had been averted. The peasantry everywhere has for two years kept up its gold hoarding, and financial centres have been characterized by a severe underlying strain resulting in large part from the persistent refusal of European investors to return to the market for the purchases of securities customarily made in less troubled times. Meanwhile there has been a determined programme of gold accumulation to strengthen the central banks of the Continent against the requirements of a war in which the leading nations might be involved.

Despite all this there has been a refusal both abroad and here to assent to the theory that any crime of such enormous magnitude as a general war could be committed by the European Powers. And this is why the awful threat that shook civilization this week came like a bolt from the blue. Every conclusion dictated by the intellect was against the possibility even of so catastrophic a conflict, but the trouble with these conclusions was that the circumstances of war defy logical analysis. War is something outside the categories of reason and defies all its processes. Illustration of this has been most agonizingly afforded by the tremendous financial breakdown throughout the world in the last few days, a breakdown which established beyond any question the validity of the economic argument against war. How little war recks of the arguments of reason was convincingly shown by the fact that even this proof of economic disaster seemed impotent to prevail against warlike purposes framed in dynastic policies, smoldering racial hatreds and age-long national strifes and animosities apparently reconciled only in recent years by an armed neutrality.

How mad the whole business is, is further denoted by the astonishing alignment of the European nations on the eve of Armageddon. Great Britain as part of the Triple Entente finds itself allied with France and Russia against Germany, Austria and Italy. We may be sure that the British people have no desire to be drawn into a continental conflict in any case and that Italy has more warrant for antagonizing its ancient oppressor, Austria, than for aiding it. Logically, the European alignment, if war has to be made, should array the Teutonic nations against the Slavs. The Slavonic part of Hungary and the Slav States in the Balkans siding with Russia might comprehensively be opposed to the rest of Europe, but how illogical man can become is demonstrated in the hostilities contemplated among the Teutonic nations. Great Britain and France are Germanic, if they are anything, and the Latin countries are essentially far more in sympathy with them than they are with the Slavs.

Whatever the political occurrences may be the record of the past week is a pitiful one of colossal destruction wrought in advance of an actual clash of arms among the Powers. Financially Europe is to-day all but a wreck. The central banks stand out on the Continent like Gibraltars, and generally speaking, the more important private banking institutions everywhere in Europe have maintained at least outward soundness, while Great Britain has on the whole withstood in good shape so far the pressure of the financial storm that has blown out of the war cloud. Nevertheless the European stock and money markets are full of debris. There have been no one knows how many failures of brokerage and lesser banking concerns and after a stupendous reduction European security values are only nominal. The money markets abroad have been practically paralyzed and official discount rates have been advanced.

Effects of the European tragedy have been produced in every direction here and it is unthinkable to suppose that if the worst should happen abroad worse affects will not be suffered. Occurrences so far have transformed all of our recent financial and business prospects, but they have still provided some encouragement for the view that the first shocks of the European upheaval will cause the greatest damage possible to inflict here, and that when that much damage has been done there must be some restoration of better conditions.

Meanwhile, the Government at Washington exhibits just what

might have been expected of it, an absolutely amateurish conception of the financial and business relations of what is taking place in Europe, to prattle about the business beneficence of its legislative policies as though any one cared a fig about the business bearings of statutory enactment in the face of the calamity which Europe has inflicted. The Treasury prattles in an imbecile fashion about the gold stock which it holds, as though the accumulation on which gold certificates have been issued were so much free metal available for the use of the markets, and it plans to dump actual Government resources into the banks ostensibly to help move the crops at a time when the probable result of its deposits will be to accelerate the foreign drain of gold.

Whatever the development of the near future may be Americans can find satisfaction in the way in which the country has so far borne the brunt of Europe's war panic. The economic strength and fundamental soundness of the United States is concretely symbolized by Wall Street and its activities, and there is proper cause for pride in the manner in which Wall Street proceeded to meet the tests imposed upon it. Long after financial Europe had gone out of business in utter demoralization, causing the primary stock and money markets of all other countries practically to suspend operations, Wall Street maintained a good market for money and a good market for securities. How much longer it can do so against the fears excited by the European convulsion is, of course, a question, but if American finance weathers this storm without any more tokens of disaster than have been noted this week, all the world will have to recognize the immense economic solidity and stability of the United States.

It is the testimony already afforded to this fundamental soundness which encourages conviction that Europe's folly will become American opportunity. All the book economists have been rushing into print to argue that war in Europe can be no advantage to the United States and the formulas of book economics have incontestable merit. Nor can we expect for some time to come to get over the mischief which has already been wrought here, but if we are able to keep our feet in this critical juncture of the world's affairs, a very convincing argument can be offered against the economics of the book and in behalf of the destiny of the great pacific industrial nation which we all love and in which we live and move.

COTTON

August 1, 1914.

IT can hardly be said that there have been cotton markets, in any proper sense of the term, during the past week. Virtually all of the considerations which customarily govern the cotton trade in its operations have been to all intents and purposes forgotten. Nothing has received attention except the swift movement of events in Europe towards an apparently certain general war. Among those regularly engaged in the trade the only desire has been to reduce commitments of every kind, or, where this was impossible, to protect commitments as far as possible from exigencies beyond direct control. All the usual practices of the trade have been thrown into complete confusion by the virtual cessation of commercial intercourse between the United States and the countries of Europe, not by reason of a state of war, of course, but because of the utter uncertainty for ship-owners, marine underwriters and dealers in foreign exchange as to their position, should a general European conflict begin. Great numbers of vessels have been withdrawn from their usual routes, and ocean freights have become almost unobtainable. The war-risk premium demanded by marine insurers has jumped violently upward, until it exhausts five or six times over the common profit on cotton transactions. Foreign cotton merchants are cabling frantically to hold up shipments, because they do not know how to finance the cotton after its arrival at the foreign points of destination. Hence the supply of cotton bills (and the same is true of grain bills) has become almost nil. A consequence of this has been an utter dearth of means of remittance from this to foreign countries, other than actual gold. As Europe has been selling an enormous quantity of securities on our stock exchanges and calling for the money realized from their sale, the necessity of shipping gold has been emphasized beyond anything ever before known. And here the same trouble has developed as with the shipment of cotton or grain. The marine underwriters have more than reached their capacity in covering the shipments of gold, and even an unheard-of war-risk premium does not tempt them to increase their lines. So there is an automatic check upon the shipment of gold, with the result that prices for cable transfers have reached levels never before known. Yesterday, $6.00 per pound sterling (the usual rate being $4.86 to $4.87) for cable transfers from New York to Liverpool was offered to dealers in exchange in New York, and they refused the offers. Cotton exchange operations were greatly affected by this condition of things, inasmuch as the large arbitrage operations between the American and the foreign markets call for continuous large cable remittances, backward and forward. When the American remitter pays a rate of $6.00 per pound sterling, he is actually losing 22.9 per cent upon his remittance, which is of course absolutely ruinous. On such a basis it is out of the question to conduct business. Yet so great is the need of actual money abroad that some foreign correspondents of American houses have been willing to pay rates of exchange almost, if not quite, as high as that quoted above. The inevitable solicitude caused by this state of things, however, has not been the only cause of intense anxiety to the cotton trade in the United States. Looming up in the near future is the question of what is to be done with the new cotton crop, which will begin to move in volume in scarcely more than a fortnight. How is this to be financed? What are cotton merchants to do with it, if they are cut off from exporting the sixty per cent of it which Europe regularly takes? It goes without saying that it cannot all be sold on the American exchanges without complete demoralization of the market. Only by the distribution of the load over the entire world has it been possible to maintain cotton at a reasonable price, relative to the cost of production. If there is to be a general European war and a blockade of the highways of the ocean, the farmer must either hold his cotton off the market or sell it at a price so low as to attract capital from other uses to buy it and hold it for the future. Who can foretell how a problem so vast will be worked out? Hence those who have spent their lives as merchants or traders in cotton are all at sea and dare to make almost no commitments at all. The ruinous results of this situation were illustrated yesterday by the failure of a large commission-house on the New York Cotton Exchange, which had been unfortunate enough to have many customers long of contracts and which, when international uneasiness became acute, could find no market on which to sell out. In the midst of all this confusion and anxiety little attention was paid to the Condition Report, issued yesterday by the United States Department of Agriculture, giving the condition of the crop as at July 25. The average figure published, 76.4 per cent of normal, was much lower than the trade had been expecting; and under normal circumstances it would have been regarded as extremely bullish. The decline in condition between June 25 and July 25 was shown to have been 3.2 per cent, though common opinion had anticipated some improvement for the month. On the basis of the Department of Agriculture's formula for this year, which places the normal (or 100 per cent) for August 1 at 234 pounds of lint per acre, the crop expectancy indicated by a condition of 76.4 per cent of normal, on 36,960,000 acres planted to cotton this season, is 178,776 pounds of lint per acre and a total production of 6,607,560,960 pounds of lint, or 13,823,349 bales of 500 pounds gross weight (478 pounds net weight). This is a decline of 225,808 bales from the report for June 25.

Says Bombay Cotton Mills Face Crisis.—The following interesting comment anent the cotton mills situation in Bombay, India, is found in the issue of June 14, last, of "The Mahratta," of Poona:

"The Bombay cotton mills have been an object of pride to Bombay as being the most successful speciments of Swadeshi enterprise on a large scale. But internal as well as external circumstances seem as it were combined to check their further progress. Apart from the increasingly vigorous competition from Japan and Lancashire, the mills have now to contend with opposing external circumstances, much nearer home. The Country Piece-Goods Dealers' Association and the Mill-owners' Association are falling foul of each other, and if no compromise is arrived at, the result may possibly be that Manchester and Japanese merchants will take advantage of the situation and appropriate a part of the trade which is now in the hands of the Bombay mill-owners. That these foreign merchants are trying to produce the cheaper kind of cloth which is manufactured in and about Bombay, is a fact; and though circumstances might for a period preclude any possibility of their serious competition with Bombay mill-owners, still future times cannot always be expected to retain the comparative advantages which Bombay now enjoys and unless this city awakens betimes to its duties and responsibilities, it may possibly receive a rude shock from young and vigorous Japan, or astute and powerful Lancashire.

"Some of the important demands made by the Piece-goods

Dealers, as reported by a representative of the Bombay 'Chronicle,' are, 'that the insurance liability on goods not actually delivered and lying in the millgodowns should not fall on the dealers; that they should be provided with specimens of goods, so that they can find out whether the goods supplied are the actual sort they had contracted for; that in case of mills not being able to give delivery of goods within the stipulated period, they (the dealers) should be given the option of cancelling the order, or should be given a certain discount on the goods; that all disputes arising between the contracting parties should be referred to arbitrators as is done in the case of disputes between the dealers in European piece-goods and the Chambers of Commerce and that what they call the other one-sided conditions of the old contract form should be similarly modified so as to make them fair to both parties.'

"The mill-owners' point of view is that they had made all attempts at a reasonable compromise but that the representatives of the Piece-goods Dealers would have 'all or nothing.' They refuse to believe that they are at the mercy of the Piece-goods Dealers for selling their cloth. They do not fear any competition from Japan, or from Manchester. Lancashire, they think, cannot manufacture coarse cloth as cheap as the mills at Bombay and the district do, though it is obvious that as regards the manufacture of fine cloth, Manchester possesses many advantages. Whereas in Bombay cloth of six, eight, ten and twelve counts is made, in Manchester they spin cloth of twenty counts and above. Japan has, it is confessed, better opportunities for competing with Bombay, but the odds are against Japan, for it has to buy cotton in India, pay freight on it to Japan and then again pay another freight upon the manufactured cloth, while Bombay manufacturers have no freight charges to pay at all.

"We do not pretend to say whether reason leans on the side of mill-owners or of Piece-goods Dealers, and indeed are inclined to safely and prudently say with the immortal Sir Roger De Coverley, that 'much may be said on both sides.' But it seems to us that if the dispute be carried on with a spirit of bitter obstinacy on any side, the policy would be not only unpatriotic but suicidal. The mill-industry is still in its infancy and is suffering internally from comparative inefficiency as well as from paucity of labour, as Mr. D. E. Wacha has recently shown in his usual statistical and accurate method—and it would be a grievous calamity if it has to seriously contend with uncongenial and contentious environments at this stage of its life. The ruin of the Bombay mills will not fail to prejudicially affect and even jeopardize the occupation of the Piece-Goods Dealers. We hope that this interdependence of interests will be realized by both the parties and that the trade will soon seen an end of the unfortunate dispute."

NEW YORK QUOTATIONS FOR STANDARD COTTON GOODS AND YARNS

The following are quoted prices in the New York market for typical standard cotton goods (in cents per yard) and cotton yarns (in cents per pound) on Saturday of last week and on Wednesday of the present week:

Cloths.	Saturday.	Wednesday.
Print cloths, 28 in. 64 x 64s	3 3/4	3 3/4
Gray goods, 38 in., standard	5 1/8-5 1/4	5 1/8-5 1/4
Brown sheetings, Southern standard	8	8
Denims, 9-ounce	14-17	14-17
Tickings, 8-ounce	13	13
Standard prints	5 1/4	5 1/4

[Foreign exchange quotations have been utterly chaotic during this week, owing to the impending war in Europe, and it is useless to try to give a record of them.]

SUMMARIZED STATISTICS OF AMERICAN RAILROADS AS COMPILED BY THE INTERSTATE COMMERCE COMMISSION

THE forthcoming twenty-sixth annual report of the Interstate Commerce Commission will give completed statistics for American Railroads for the governmental year, ended June 30, 1913. In the meantime, advance figures have been given out by the Commission for some of the more important statistical categories. The final figures may show slight modifications here and there, switching and terminal operations not being now included, but the present figures may be expected to be substantially the same as those contained in the report. Although the statistics represent a state of things already more than a year old, they are the latest obtainable which cover all the railroads of the country. They are given below, in tabular form wherever possible:

CAPITALIZATION OF AMERICAN RAILROADS, 1912-1913.

Preferred stock	$1,379,036,282
Common stock	7,231,515,045
Total stock	$8,610,611,327
Mortgage bonds	$8,186,366,426
Collateral trust bonds	1,189,636,796
Plain bonds, debentures and notes	1,107,076,783
Income bonds	250,290,655
Miscellaneous funded obligations	32,858,275
Equipment trust bonds	369,285,450
Total bonds and funded obligations	$11,185,514,385
Grand total of stocks and bonds	$19,796,125,712

Out of the total preferred and common stock outstanding $2,836,023,744, or 32.94 per cent, paid no dividends during the year 1912-1913. The total amount of dividends declared during the year (by both operating and holding companies) was $368,606,327, or 6.38 per cent on all the dividend paying stocks. It is to be observed here, however, that the dividend distributions to the ultimate owners of the railroads fell much below this sum, inasmuch as dividends by operating companies paid to holding companies and by them distributed to the ultimate owners are included in the figure, as well as the dividends of the holding companies. The same remark, to a considerable extent, applies to the figures of capitalization given above, there being much duplication of stocks and bonds of the operating roads and of the stocks and bonds of the operating or holding companies, the latter being issued against holdings of the securities of the operating roads. Exact figures for these duplications have not yet been issued by the Interstate Commerce Commission.

The operating revenues and expenses of the roads in 1912-1913, as compared with 1911-12, were as follows:

	1911-1912.	1912-1913.
Operating revenues	$2,826,958,266	$3,125,135,798
Operating expenses	1,959,094,658	2,169,968,924

The difference between operating revenues and operating expenses is applied to interest on obligations, dividends on stock, betterments of property accounts and similar expenditures.

The number of passengers carried during the year was 1,033,670,755. The corresponding number for the year 1912 was 994,372,283. Increase, 39,307,397.

*Per cent price.

The passenger mileage, or the number of passengers carried one mile, was 34,575,872,980; the corresponding return for 1912 was 1,536,762,172 less. The number of passengers carried one mile per mile of road was 143,067, as against 140,293 for the preceding year.

The number of tons of freight reported as carried (including freight received from connections) was 2,058,035,487, while the corresponding figure for the previous year was 1,818,795,630, the increase being 239,239,857 tons.

The ton mileage or the number of tons carried one mile, was 301,398,752,108. The corresponding ton mileage as reported for the year 1912 was 263,779,908,254, the increase over the returns for 1912 being 37,618,843,854.

The average receipts per passenger per mile were 2.008 cents; the average receipts per ton per mile, 0.729 cent. The passenger service train revenue per train mile was $1.35555; the freight revenue per train mile was $3.24347. The average operating revenues per train mile were $2.45387. The average operating expenses per train mile were $1.70374. The ratio of operating expenses to operating revenues was 69.44 per cent.

The following table contains the more important statistics of the physical property and of the operating personnel of the railroads of the United States for the year 1912-1913:

Total railroad mileage of all kinds	369,579
Miles of single (main) track	*244,418
Miles of second (main) track	26,270
Miles of third (main) track	2,588
Miles of fourth, fifth and sixth (main) track	1,964
Miles of yard tracks and sidings	94,338
Increase of total track over 1911-1912	8,628
Passenger locomotives in service	14,396
Freight locomotives in service	37,924
Yard locomotives in service	9,834
Locomotives in miscellaneous service	1,224
Total locomotives in service	63,378
Passenger cars	51,700
Freight cars	2,273,564
Cars in companies' service	120,244
Total cars of all classes	†2,445,508
Average number of locomotives per 1,000 miles of line	259
Average numbers of cars per 1,000 miles of line	10,005
Number of passenger-miles per passenger locomotive	2,341,269
Number of ton-miles per freight locomotive	7,843,663
Number of persons on pay-rolls of roads	1,815,239
Average number of employes per 100 miles of line	743
Total amount of wages and salaries paid	$1,373,830,589
Increase of employes over 1911-1912	115,298

*Including 11,162 miles used under trackage rights.
†An increase of 76,566 cars over 1911-1912.

Things and actions are what they are, and the consequences of them will be what they will be; why then should we desire to be deceived?—Bishop Butler's Sermons at the Rolls.

AN exceedingly serious problem has to be solved by the United States in the very near future, by reason of the conditions brought about by the general war in Europe. We do not mean to say that there are not many such problems; but this is the most serious of all. As everybody knows, this country is the most important of all the sources of the cotton supply of the world. Nearly three-quarters of all the cotton annually consumed in the world to-day (leaving out of account the domestic consumption in China, India and part of Africa) is produced in the United States. The demand for American cotton has been so insistent and so steadily increasing that cotton growing has become the chief agricultural pursuit of all our Southern States, from the Atlantic seaboard to Texas. The economic welfare of those States is bound up with cotton. Deprive them of a ready market for their cotton, and a large portion of their population is at once reduced to almost penury, and the entire population undergoes a serious economic setback. Moreover, the country as a whole has come to be largely dependent upon cotton for the maintenance of its economic and financial equilibrium. Approximately sixty per cent of the cotton crop of the United States is exported to foreign countries, chiefly to the very countries which are now engaged in desperate war one with another in Europe. The value of the exports of cotton from the United States in the governmental year ended June 30, 1914, was well over $600,000,000, leaving all other agricultural exports far behind, and affording this country vast credit balances abroad, wherewith to offset the various adverse items of our international financial and commercial situation. Through this exported cotton our balance of trade with other countries has for long years been equilibrated, our stock of gold has been protected, our credit has been kept reasonably free and flexible at home, and all the departments of our industry and commerce have been enabled to fulfil their economic functions without disturbance or interruption. Such are the benefits we derive from our annual cotton crop, which more directly and advantageously affects our economic position than any other crop we produce or than the product of any of our industries, even the greatest, like iron and steel.

It goes without saying that one of the most important economic aspects of the American cotton crop is the marketing of it. Through the development of the great cotton exchanges in this country and abroad, with their system of future contracts used as hedges against future commitments,—whether those commitments be in cotton owned and on hand, or in cotton to be delivered in the future, or in cotton needed presently or in the future by manufacturers, it has become possible and usual for the farmer who grows cotton to sell it when he pleases, to turn much of it into cash as soon as it is picked and ginned, and to carry along such portion of it as he does not need to sell at once, until he can obtain a market price satisfactory to himself. Much of the cotton, however, has to be sold by the producers almost as soon as they have got it out of their fields, because they must pay off their bills to the country merchant; the latter, in his turn, must meet his engagements with his local bank or with the wholesaler who has sold him his stock of goods. Both the local bank and the wholesaler, again, are in the same position, for the local bank must pay off its debt to the metropolitan bank and the wholesaler must meet the bills or notes he has given either to his bank or to the manufacturer or importer, which latter have been discounted with banks and must be paid. The chain does not end even here; for the metropolitan banks must provide the means of meeting the bills of exchange drawn against this country by all foreign countries, whether against commodities bought by us abroad or against the vast transactions of international finance. Thus the four months from September to December of each year, when the greater part of the cotton crop is marketed, have come to be almost a national debt-paying period, similar,—to compare a great thing with a small,—to those periodical debt-paying days which some Western communities have instituted. In a way, of course, wheat and corn may serve the same purpose; and they formerly did so on a large scale, when we had an exportable surplus of grain. This year the large wheat crop again brings wheat into this function. But in general it is true that in recent years we have had to rely chiefly upon cotton to enable us

to straighten out our international accounts and to get ourselves in a good state for the coming year's campaign. The machinery by which all the important processes just described are accomplished has been developed to a high degree of perfection, and in normal years its working is so smooth and noiseless that it scarcely attracts attention.

In a sense the most important cog in this machinery is the modern cotton exchange, with its system of employing contracts for the future delivery of cotton, as a means of insurance for all those in the long chain of merchants, bankers, and manufacturers who must take part in the tremendous operation of collecting the cotton from the million and a half farmers who produce it, and of distributing it to the ends of the earth, to those who use it and ultimately pay for it. Without insurance against price fuctuations and the losses occasioned by them, the cotton business of to-day is impossible. The price insurance which the cotton trade has created for itself, as has been said, is the insurance obtained through contracts for future delivery made on the great cotton exchanges. This is the only kind of price insurance now available. In normal times it functions as perfectly as any human institution can; but like all human institutions which private persons, however numerous, create and conduct, it does not and cannot in the nature of things make provision for the great catastrophes which befall mankind. These catastrophes are happily of the rarest occurrence; but when they do come the ordinary machinery of economic activity must inevitably prove inadequate to deal with them.

All the processes, described above, of marketing the annual cotton crop of the United States, have for the past forty years and more revolved about the great cotton exchanges at home and abroad. In them has been found the insurance against loss through price fluctuations which has made it possible for cotton merchants, co-operating with bankers and manufacturers, to provide an instant market for all the cotton offered for sale by the farmers in the Autumn months, and to send this cotton along its route to the ultimate users of it, while performing the indispensable office of clearing up for stratum upon stratum of users of credit the obligations, domestic and foreign, which must annually be liquidated, if industry and commerce are to proceed in the modern way. Nor, under this system, has it made any material difference that the greater part of the annual crop is sold in one-third of the year, while the consumption, of course, is stretched over the entire year. The known needs of the future, insured against through future contracts on the exchanges, have been entirely able to take care of the temporary surplus.

But now the cotton trade, and the country with it, is face to face with a breakdown of the customary method of insurance against the price fluctuations of cotton, just as it has already had to face the breakdown of existing marine insurance. A vast catastrophe is upon the world. Nation is warring against nation; all communication between part and part of the commercial and financial fabric created during the past century is profoundly disturbed or interrupted altogether; the co operation of every portion of the cotton trade and cotton industry, wherever located, in maintaining the insurance of handlers of cotton against ruinous losses is rendered impossible. Hence every great cotton exchange in the world has closed its doors. Business upon these exchanges has utterly ceased; and there is no possible way of obtaining anywhere in the world that protection against losses through price fluctuations, without which the cotton merchant cannot prudently buy or own a bale of cotton or the banker lend a single dollar upon it.

It is no secret that the immense problem here presented is at this moment engaging the attention, not only of the most experienced American cotton merchants, but also of the most skilful of American bankers. The economic loss and the financial confusion that would result to the country, if the cotton that must be sold in the months from Sepember to December cannot be handled in substantially the usual fashion, are too vast for contemplation; and the most experienced and steadfast men who have been conversant with both the commercial and the financial side of cotton for many years past realize this most keenly. They know that some form of insurance against price fluctuations must be provided for the cotton trade within the next three weeks, or else the cotton farmers will be left prostrate at the end of this crop, the country merchants and bankers will be severely and perhaps ruinously strained, the liquidation of all kinds of accounts all along the line will be postponed and exposed during the period of postponement to an immense risk, the credit facilities of the country will be curtailed, and our international commerce and finance will be exposed for a long time to come to inability to protect our gold supply, to a heavy burden of adverse foreign balances and to a probable retardation of our national prosperity, when the fierce world storm of to-day has at last blown itself out.

What the cotton trade needs, and all that it needs, to enable it to work out all the details of this vexing problem is credit, and that antecedent to credit, insurance against losses from price fluctuations such as hitherto has been afforded by the cotton exchange contracts for future delivery. There can be no question that the coming cotton crop can be marketed and marketed advantageously, provided only it can be safely carried by merchants and worked off gradually. The danger lies in the possibility of forced selling by farmers during the early months of the season, under conditions that preclude the merchants from buying, except from hand to mouth, and the banks from lending. The world must have the greater part at least of the crop before twelve months are past; the nations, both those at war and also those great countries of the Orient, of Africa and of South America which are not engaged in the war, must somehow get their customary supply of cotton fabrics. The mills of the United States will almost certainly consume more cotton in 1914-1915 than ever before in their history; England will find a way to get cotton to Lancashire; France and Italy and Spain and Russia can all find means of obtaining the American cotton they regularly consume. It is only Germany and Austria and perhaps one or two of the smaller European countries in the war area that may find themselves confined to the supplies of cotton they already have on hand. The difficulty is not going to be with regard to the ultimate consumption, but with regard to the slowness with which the cotton is contracted for by the spinners, in view of the hand-to-mouth method of financing they will be compelled to follow by their banks. It may be that at the end of August, 1915, the carry-over of American cotton will be larger than usual by two or three million bales, or some two months' consumption; but this is not an unbearable load. The problem, then, is not that of dealing with such a superfluity of cotton as will, like the visible supply of Brazilian coffee six or seven years ago, evidently supply the entire demand for coffee for more than a year,

during which year a new crop will be added to the supply. In fact, it is a technical problem, rather than one of long-run supply and demand, that has to be solved. In all probability more cotton must be sold by farmers during the months from September to December than can possibly find an immediate demand, but not more, or not much more, than can be distributed during the twelve months from September, 1914, to August, 1915. The cotton trade will readily carry this load, if only it can find enough price insurance. The cotton exchanges can furnish much of this price insurance, but lacking the instantaneous world-wide market they are accustomed to, they cannot carry it all; nor, if the risk appears too great, will they dare to carry any of it.

Some form of price insurance, in sufficient amount to enable the cotton trade to perform its function of buying, carrying and distributing the cotton crop, is what is primarily required at this juncture. The question is how this can be best obtained. England has had a similar problem to deal with in connection with the war risk on her food supply; and she has recognized that the amount of war risk marine insurance obtainable while the general war is on, falls far short of the amount required to enable wheat merchants to bring to Great Britain enough wheat to feed the population. Accordingly, she has undertaken to assume the most of this war risk on wheat herself, by giving a governmental guarantee to pay 80 per cent of the cost of it. In other words, she has made her entire population assume the function of war risk insurers, because the entire population is vitally concerned with having enough wheat come to England to enable the individuals constituting the population to live.

However individualistic may be one's conception of the duties and purposes of government, it is difficult to argue against the proposition that the whole people, through its government, should undertake to supply means for mitigating the effects of catastrophes which touch all. We need not say that we are ourselves unalterably opposed to all schemes of governmental interposition in the economic life of the people, which have for their end and aim the benefit and support of a part of the people in the competitive struggle of life. But we do conceive it to be not only defensible but advantageous to have government, as representing the entire people, use its power to diminish as much as possible the consequences to each and every citizen from a world catastrophe. This interposition should, in our opinion, be restricted to the smallest possible extent and should be so devised that it will leave to the ordinary initiative of those concerned with the matter demanding help, the freest possible opportunity to do as much of the work as it can.

The Government of the United States, then, unless there comes a sudden and totally unanticipated conclusion of the general war in Europe, must lend its power to cotton merchants and bankers, to the end of preventing the sacrifice during the next four months of our greatest single quick asset, our cotton crop. But the method of using this power should be in the way of providing a sufficient supply of insurance against unnecessary losses through temporary fluctuations of the price of cotton. This is the method long in use by the cotton trade itself and the method to which the cotton trade should be left to return at the earliest possible moment. And the way, in our opinion, in which the Government of the United States should now proceed is to press the immediate organization of the new banking system, and to provide such temporary legislation as will permit the rediscounting of bills and notes against cotton, with a lower requirement in the way of a gold reserve for a limited period, when cotton is the collateral. If in addition to this the Government should guarantee these bills and notes for the reserve banks, at a specified price for cotton sufficiently below the cost of production to make the paper ultimately sure to be safe, the insurance against losses through price fluctuations, of which we have spoken above, would be provided, and the cotton trade would see to it that the coming crop will be marketed at no ruinous level of prices.

Arthur Richmond Marsh

THE DECISION OF THE INTERSTATE COMMERCE COMMISSION IN THE EASTERN INCREASE OF RATES CASE

ON Saturday, August 1, the Interstate Commerce Commission handed down its long awaited decision upon the increase of freight rates asked by the railroads of New England, the trunk line territory and the Central Freight Association territory, being the fifty-two railroad lines and systems in the entire section of the country East of the Mississippi River and North of the Potomac and Ohio Rivers. The case had its inception in May, 1913, when the railroads concerned filed freight tariffs with the Commission, in which the proposed increases were embodied. It has been generally understood by the public that a uniform increase of 5 per cent was asked for, and the case has come to be known as the "5 per cent rate case." In fact, however, the railroads did not ask for a uniform increase of 5 per cent on all commodities, but in general for this amount of increase in rates higher than $1.00 per ton, and for five cents per ton in rates lower than $1.00 per ton. As many commodities are hauled at less than $1.00 per ton, particularly for short distances, the increase asked was on a percentage basis for all commodities from 5 per cent to perhaps 50 per cent.

When the tariffs were filed, they were immediately ordered suspended by the Interstate Commerce Commission, and hearings were ordered. These hearings were of the most extensive character, lasting throughout 1913 (after May) and through the first five months of 1914. Arguments were made by leading railroad executives, elaborate statistics were prepared under the direction of the Commission and other statistics were submitted by the railroads, numerous protesting shippers and representatives of associations of protesting shippers were heard, and thus probably the most elaborate investigation of freight rates ever made in this country was carried through. In the meantime, the patience of the financial community was sorely tried, particularly by reason of the fact that the general financial conditions were becoming increasingly disturbing, and there was the severest criticism of the Commission for spending so much time in arriving at a decision upon what the business community had come to regard as something indispensable to a revival of confidence and prosperity. It is probable that an overwhelming majority of that public which has to do with affairs and a very large proportion of the intelligent public as a whole became convinced that an increase of at least the 5 per cent in freight rates desired by the railroads was not only justified in itself because of the higher "cost of living" for the railroads, but also because of its expected effect upon general business conditions.

It is hardly possible to read the decision and the accompanying opinion of the Interstate Commerce Commission without having at the end the feeling that after all that body was justified in the time spent by it in examining into the facts. The opinion presents

many angles to the matter which have either been unknown to the public or which have been only obscurely perceived. It is of immense importance to the economic welfare of the country that the railroad rates upon essential commodities and its railroad passengers are maintained at not only sufficiently remunerative to the railroads to enable capital to continue the increase and improvement in our railroad facilities, but that they should also be properly coördinated, properly balanced between one class of traffic and another, and above all, that they should be so calculated that every part of the traffic pays its part of the burden. The opinion of the Interstate Commerce Commission brings out convincingly that these essentials of a sound system of rates are far from being in effect to-day upon the fifty-two railroads applying for the higher rates. A vast reform of all kinds of minor and some major practices is shown conclusively to be required, before the railroads can come into court with a case above criticism.

Before speaking of these matters of criticism it is well to state exactly what the Commission has allowed to the railroads in its decision. It has divided the fifty-two railroads applying for the increase of rates into three groups, the New England roads, the trunk lines and the lines in Central Freight Association territory, the last being the lines west of Buffalo and Pittsburgh, north of the Ohio River and east of Cairo, St. Louis and Chicago. To the first two of these groups,—the New England lines and the trunk lines,—the Commission has granted no increase of rates, on the ground, to use the words of the opinion, that: "We find that the financial condition of the trunk line carriers does not warrant a general increase of freight rates and shall also show that the needs of the New England lines are being cared for locally. The carriers failed to prove either that existing rates in trunk line or New England territories are too low or that the increased rates proposed for those territories would be just and reasonable rates. Nor have they proved that the existing inter-territorial rates in official classification territory are too low or that the proposed increases in those rates would be just and reasonable." With regard to the lines in Central Freight Association territory, however, a very different situation was, in the opinion of the Commission, disclosed as existing. This situation is set forth as follows in the opinion:

"The attitude of the officials of the roads operating in Central Freight Association territory, as disclosed on the record, indicated that they joined in this proceeding, not because they thought the so-called 5 per cent increase of rates would meet their requirements or that this form of relief is appropriate in Central Freight Association territory, but only because of the desire of other and more powerful lines operating in trunk line territory to present to us in this proceeding one general plan of relief.

"These officials, while stating that the so-called 5 per cent increase would add substantially to their revenues, expressly condemn the present basis of rates as unsuitable and unsatisfactory. The leading railroad witness on the question affirmed with some earnestness that 'the class rates do not sustain any logical relation to each other,' and that under the present basis of rates 'certain shippers of certain classes of freight have not for years borne their share of the burden of transportation, and in addition to the relief [some extremely low they are unscientific and illogical.'

"[illegible] also expressed of record by many large shippers. A [illegible] Chicago shipping interests, whose testimony [illegible] put on record here, testified that the [illegible] scale was a 'relic of barbarism.'"

[illegible] and argued the case for the Central [illegible] admitted and definitely stated that while the [illegible] would help the financial situation the whole rate structure in that territory needed a readjustment; that many of the lines in the territory would not survive without an 'overhauling of their rates and could not serve the public as they should until those rates are readjusted and brought upon some logical basis.' He also stated that if the rates were now advanced on the so-called 5 per cent basis it would be but a short time before those lines would be before us again. He gave express notice that the Central Freight Association lines, if the 5 per cent increase were not allowed, would 'in due time file tariffs and bring the matter to the attention of the Commission.'"

Whence the Commission draws the conclusion that:

"There can be no doubt upon the record that the carriers in Central Freight Association territory ought, in the public interest, to have as much additional revenue as would be produced by a 5 per cent increase, as modified herein, and possibly more. It is not improbable, however, in view of the modifications we have required in those tariffs, that they will find it more desirable at once to undertake the readjustment which they assert is necessary."

As confirmatory of its conclusions with regard to the propriety of granting rate increases in Central Freight Association territory which are not granted to the trunk lines and the New England lines, the Commission compares the average ratio of net operating income to property investment for seventeen trunk line systems with that of thirty-eight Western roads, from 1903 to 1913, in the following table:

RATIO OF NET OPERATING INCOME TO PROPERTY INVESTMENT.

Year.	Seventeen Eastern Lines. Per Cent.	Thirty-eight Western Lines. Per Cent.
1913	5.98	4.35
1912	5.67	4.30
1911	5.96	4.47
1910	7.04	5.48
1909	6.39	4.63
1908	6.23	4.59
1907	7.14	5.49
1906	7.36	5.18
1905	7.19	4.44
1904	6.67	4.38
1903	6.67	4.90
Average	6.52	4.72

Accordingly, the Interstate Commerce Commission allows increases in freight rates in Central Freight Association territory alone; and these increases, though not the horizontal 5 per cent asked for by the roads, with the allowing of 5 cents per ton on ton-rates below $1.00 per ton, are estimated to be sufficient to yield approximately the same additional revenue that would have been obtained by the roads from their own proposal as regards this territory, i. e. somewhere from $16,000,000 to $20,000,000 per annum. It is noticeable, however, that none of this increase is to come from increased rates on heavy commodities, largely hauled in train loads, such as coal, iron ore, coke, clay, brick, tile, plaster and the like.

Some 112 railroads are affected by the new rates, most of them belonging to thirty-five railroad systems with an aggregate capitalization of $6,389,535,638, and having gross operating revenues in 1913 of $1,424,119,991. It is to be noted that through their ownership of roads in Central Freight Association territory, the larger trunk line systems, though refused an increase for their trunk lines proper, obtain a share of the increase. Thus the New York Central, operating 12,690 miles of road altogether, has 8,938 miles in the Central Freight Association territory. Of the Pennsylvania's 11,228 miles, 4,838 are in Central territory. In the case of the Baltimore and Ohio, 2,443 miles out of a total of 4,480 miles operated are in this territory. In a less degree the Erie, the Chesapeake and Ohio, the Norfolk and Western, benefit through their ownership of Western lines.

The amount of rate increase accorded to the railroads by the Interstate Commerce Commission is certainly far below what the railroad executives have thought it to be imperative for them to have. Yet the Commission has at last shown that it will not turn a deaf ear to pleas for higher rates, when it can be proved statistically that existing rates are absolutely below the line of what is just and reasonable. There is some degree of satisfaction to be derived by the railroad managers from this fact. For the public, however, and particularly that part of the public which would invest in railroads, perhaps the most interesting portion of the opinion is that which points the way which railroad rate regulation may be expected to take in the future. The Commission makes a series of criticisms of existing railroad practice, and indicates how reforms here would aid the railroads to procure the income needed to make them prosperous. It is clear that the ideas of Mr. Brandeis have counted for much in respect of these matters; yet it must be said that a general air of reasonableness prevails. The railroads are told that their passenger rates are too low, taking into account the cost of the service given, to enable their passenger traffic to bear its share of the cost of railroad transportation in this country. Suggestions, and valuable ones, are given for the correction of this evil. Then insufficiently remunerated services to shippers, particularly to large shippers, are dwelt upon as requiring attention. The cost of inefficient methods of employing rolling-stock and lack of efficiency in various other directions are dwelt upon. The extravagant giving of free transportation and of special cars or trains to persons connected directly or indirectly with the railroads is pointed out as a serious cause of leakage. Improvident holding of unproductive and unneeded real estate and extravagant practices in the purchase of supplies, rolling stock, equipment, etc., are likewise pointed to as diminishing the net operating revenue of the roads. And, finally, the irregularity of rates, often the result of pure inattention, is given as a cause of an unremunerative return from the operation of the roads. On this last point, the ideas frequently expressed by Professor William Z. Ripley, the eminent professor of railroad economics of Harvard University, appear to have had their influence. To sum all up, the railroads are urged to seek within themselves gains and savings which will give them the income requisite both to meet the rising "cost of living" and to yield an attractive return for their stockholders. Taken all in all, this is not a bad direction for the Interstate Commerce Commission to press in. The railroads will doubtless learn much, in spite of their general scepticism about the suggestions of the Commission, from these suggestions and recommendations.

THE TEXTILE INDUSTRY IN GERMANY AS COMPARED WITH OTHER COUNTRIES

By A. Raffalovich

Translated from "L'Économiste Français"

TAKEN in its entirety, with its 1,100,000 workers, with an aggregate import and export movement that amounts to very nearly 3,100,000,000 marks [mark=23.8 cents], or 3,875,000,000 francs [franc = 19.3 cents], the textile industry represents a very important part of the manufacturing and commercial activity of Germany. It is compelled to obtain from abroad its entire supply of raw cotton, jute and silk, and a constantly increasing proportion of its wool and flax. From this source the merchant marine of Germany derives a considerable portion of its freight, just as the textile industry itself profits through the science of the German chemists and the skill of the machinery manufacturers. Although formerly it was forced to seek madder and indigo from France and to go to tropical countries for dye-woods, it now gets its coloring materials from German factories which, over and above German requirements, export colors extracted from coal and its by-products, valued at more than 250,000,000 francs annually. Though once forced to buy most of its machines in England, it now obtains from that source very few of them, all specialties; and Germany herself exports mechanical appliances for spinning and weaving over the entire world. Working with raw materials which are subject to the vicissitudes of the seasons, such as cotton, flax and jute, or which are affected by drought or excessive rainfall, as is wool, the textile industry presents considerable risks in all that concerns the purchase of the raw material, the sale of yarns and other products and the relativity of price between the partially and the completely manufactured goods. It is subject to the unfavorable effects of speculative operations, which are carried on in the United States (cotton), at Liverpool (cotton), in Italy (silk), at Lyons (silk), at Roubaix (cotton and flax), and at Leipzig (wool). It is much affected by the operations of customs tariffs, which put a burden on the importation into Germany of yarns of the finer and finest counts and which, on the other hand, interfere with the industry at its foreign outlets. It numbers, among the larger manufacturers, leaders of the doctrine of protection. Nevertheless, however important it may be, however considerable may be the volume of its business, still it does not play in Germany a rôle comparable to that of the mineral and metalurgical industries, to that of electricity nor to that of chemical products. Less is said of it in the newspapers and in economic and financial journals. It is true that textile securities quoted on the stock exchange are relatively very few. The situation of the industry must, nevertheless, be taken into account, in the country's general balance sheet, for a large amount; and that all the more because prosperity and depression are swiftly reflected in the textile trade. If business is good, if money is easy to make, expenditures for articles of wearing apparel increase rapidly; a good harvest, for instance, has a considerable effect upon the demand for ready-made clothes and for fabrics. A bad harvest, slack business, fear of war very soon cut down the wholesale demand and the purchases of customers. A factor with which the industry must reckon is fashion, however bizarre it may become. Fashions change infinitely more rapidly to-day than ever before. The length of time for which there will be a demand for certain goods is proportionately modified. Clothing is not, however, the only outlet that absorbs the production; upholstery, awnings or hangings and wrappings or bagging are but a few of the other sources of demand. There also the influence of fashions and of a good or bad trade situation make themselves felt.

During the Middle Ages, Germany possessed a very flourishing textile industry, the decline and final ruin of which was precipitated by the Thirty Years' War. The evolution of spinning and weaving in England, which led to the era of machinery, also had a bad effect upon the industry in Germany. The lost ground was regained but very slowly. Germany occupies to-day the third rank in the textile industry as a whole; in cotton, it comes after England and the United States; in wool, after England and France; in silk, it comes after France, America and Italy; in jute, after England; in artificial silk alone it holds first place.

The Germans of their own accord date the renaissance of their textile industry, as of other branches of industry and trade, from the period which followed the war of 1870. Along with quantity, there was an improvement in quality; in this new period great progress was made in the construction of machines and in the preparation of materials intended for dyeing, finishing and mercerising.

According to Professor Oppel, there are, in England, 6,000 textile establishments, employing 1,200,000 workmen. These establishments contain 67,000,000 spindles (of which 56,600,000 are used

for cotton), and nearly a million power looms, of which 750,000 weave cotton yarns. If there be added workers in clothing manufactures, a total of 1,400,000 active employes is reached. The annual value of the production (average) is at least 5,000,000,000 francs [$965,000,000]; in exceptional years it may exceed that figure by 600,000,000 francs. Exports reach a value of 3,125,000,000 francs annually. In the United States, there are employed in the cotton industry 31,500,000 spindles; in wool, 4,000,000; and in silk, 2,500,000. The evolution of the industry in America has been extraordinary for the last fifty years. The United States, after having been forced for a long period to import from abroad the largest part of their textile consumption, are now to a certain degree exporters. They have also made great progress in silks, imports of raw silk having increased from 24.7 to 43.6 million pounds, the number of spindles by 45 per cent and the number of looms by 70 per cent.

Germany comes third in rank in the world's textile industry, with 162,000 establishments, 1,100,000 persons employed of both sexes, 16,000,000 spindles, and 500,000 power looms. The annual value of the production amounts to 2,500,000,000 francs, of which a little less than half is exported.

France holds first place in the silk industry, with 2,000,000 spindles, 150,000 power looms and particular excellence in diversity, quality and elegance of goods. It is likewise in the lead, as regards excellence of products, in the wool industry (Lille, Roubaix, Amiens, Sedan, Reims, Épernay, Elbeuf, Paris). It has only 8,000,000 spindles in the cotton industry, principally in the Northern, the Eastern and Lower Seine districts. The linen industry is concentrated in the North, the jute trade at Dunkirk, and the corduroy business at Angers. The French textile industries are remarkable rather for quality than for quantity of production. In the French clothing industry there are employed 2,000,000 persons, and France is acknowledged mistress of taste and elegance in this field.

Russia boasts of nearly 10,000,000 spindles, 200,000 looms, and 6,000,000 workers, male and female, without counting rural spinning, weaving and knitting, which, in the long Winter months, employs some millions of persons. The Russian textile industry dates from a half a century ago, the emancipation of the peasants having furnished the labor supply. It was created by German, French, (especially Alsation), and English settlers in Russia. The three principal centres are St. Petersburg, Moscow, and Poland. Of first importance is the cotton industry with 9,112,000 spindles: of the forty-eight spinning mills in Continental Europe which have installed at least 100,000 spindles, there are twenty-eight Russian and eleven German. In St. Petersburg (1911), there were 1,643,710 spindles; in Ghent (Belgium), 1,129,403; in Lodz (Poland), 911,190; in Gronau (Germany), 640,500. The wool industry in Russia employs 700,000 spindles. The silk industry is principally carried on at Moscow. During the last twenty years, very large amounts of capital have been invested in the Russian textile industry by French manufacturers and capitalists of the Northern (Roubaix) and Eastern districts. Considerable establishments owned by them are to be found in Poland, Moscow and Odessa. The Russian State accords large protection to the industry, but increases the cost of the raw materials for its use by import duties on cotton and wool, although repaying these duties when any manufactured articles are exported. Russia is the only country in Europe which obtains from Asiatic cotton-producing districts about one-half its consumption of cotton.* In 1912, the quantity of native cotton consumed by the Russian mills was 14,301,338 poods [pood 36.07 pounds], or 57 per cent of the total.† The total world's spindleage was figured at 141.2 million in 1912, of which 7,988,000 spindles, or 6.4 per cent, were in Russia and Finland. The average consumption in Russia, figured in bales of 13.9 poods, was 261 bales per 1,000 spindles, as compared with 77 in England, 167 in Germany and 178 in the United States. Russian mills produce 22,000,000 poods of yarns and 19,000,000 poods of cloth. Russia exports cotton manufactures particularly to Asia. In Austria-Hungary, where are found some 5,000,000 to 6,000,000 spindles and 100,000 power looms, all told, the cotton industry, which has been in existence for a century, employs 4.3 million spindles and 200,000 workers; the wool industry, 900,000 spindles, 17,000 hand looms, and 30,000 power looms. This country is noted for the Brünn cloths and the Tyrolese plushes and velveteens.

Belgium specializes in the spinning and weaving of flax; the wool trade is important at Vervins and Liège; the cotton industry, established in 1790, employs 1,300,000 spindles, principally at Ghent, with 50,000 workers. Switzerland produces particularly embroideries and machine-made laces for export, but a considerable silk industry likewise flourishes at Lugano, Zürich and Basel. The recently established Italian cotton industry employs 4,000,000 spindles. It frequently complains of business crises; but in spite of the customs tariff it does much of its work for export to the Orient and Argentina. As a silk producer, Italy's chief mill centres are Milan, Como, Genoa, Florence and Palermo. In Spain the textile industry is concentrated at Barcelona. Outside of Europe, except for the United States, the only important textile manufacturing countries are British India with 6,000,000 cotton spindles and 30,000 jute spindles, and Japan.

Having indicated the position of the German textile industry, as compared with those of the other countries of the world, it is interesting to consider the conditions of its production, the source of the raw materials that it manufactures, and the outlets that it has for its finished goods; and to see whether the hope of obtaning colonial cotton has any very substantial foundation.

Before undertaking this summary description of the textile industry in Germany, it should be noted that the crisis of 1907 was a severe blow to the trade, both on account of the increase in the cost of capital, not to say the difficulty of procuring it at all, and also on account of the diminished purchasing power of the greater part of the mass of consumers. In 1908, all branches,—spinning, weaving, manufacturing of clothing,—suffered from the depression, and that in all the different districts of Germany (Saxony, Rhenish Prussia and Alsace). Raw materials underwent a considerable decline; the same was true of the manufactured products; it was necessary to make concessions to purchasers who held old contracts, in order to prevent failures. Production was curtailed, particularly in June of 1908; the German spinning mills in the South decided upon a reduction of 14 per cent, and others followed. The effects were felt till the end of the year. There was then a revival of business which was especially marked in the linen industry, favored by the fashions, and in wool, which profited by the development of various sports. But the spinning and weaving of cotton had to deal with a tremendous increase in values, which transformed the manufacturers into speculators. The price of the raw material and the prices for yarns and cloths were thrown all out of line. In 1910, the situation remained critical. A spinning company in Saxony remarked, in its report issued in the month of July, that never, except in the period between 1861 and 1864, had the situation been as difficult. During the American Civil War, there was no cotton to be had. In 1909-10, American speculation produced results almost as disastrous as the destruction of the plantations. The fluctuations in the

*In 1912-1913, the total Russian consumption was 1,941,762 bales.

†Turkestan produced 12.4 million poods [pood 36.07 pounds]; Transcaucasus, 1.9 million poods.

price of cotton terrified the purchasers of partly manufactured and manufactured products. The increase in the number of spindles was also a disturbing factor. The spinners complained of lack of work. The consumption of cotton (to judge by the imports) was 12 per cent below that of 1909. The cotton and jute industries were in an unfavorable condition, as compared with the wool, flax and velvet industries.

In 1911 and 1912, the cotton trade had an opportunity to replenish its supplies of raw material under better conditions. Besides, stocks of goods were much diminished and the trade was forced to bring them up again. The textile industry, in its most considerable branch, cotton, was slow to profit by the revival of business which manifested itself between 1910 and 1912.

Some branches (silk and flax) profited by the fashions. Others attempted to protect themselves by understandings and agreements, and by imposing price conditions under threat of not delivering the merchandise. Embroidery suffered from changes in process, modifications in fashion, and the transplantation of the industry to America.

In 1913, the German spinners and weavers of cotton had very deceptive conditions to deal with. On the one hand, the price of raw cotton did not decline; on the other, they were unfavorably affected by the efforts of the Austrian industry to throw its goods on the foreign market.

NATIONAL, STATE AND MUNICIPAL INDEBTEDNESS IN THE UNITED STATES

THE Bureau of the Census (Department of Commerce) has recently issued a valuable bulletin with regard to the amount of the National Debt and of the indebtedness of the several States of the Continental United States on June 30, 1913,—the end of the last governmental year for which complete statistics have been compiled,—and with regard to the history of the National and State debts since 1870. The last report of the Bureau of the Census upon the municipal indebtedness of the country covered only the 146 cities having a population of 30,000 persons or more, and gave the returns for these cities as of June 30, 1912. It is, therefore, not possible to obtain an absolutely accurate, or indeed entirely complete, conspectus of the entire indebtedness, —National, State and municipal,—of the country at a recent date. A near approach to the facts, however, may be obtained from combining the National and State figures for June 30, 1913, and the municipal figure for 146 cities for June 30, 1912. The following table shows the aggregate thus obtained:

	Amount.	Per Capita of Inhabitants.
Net National indebtedness, June 30, 1913...	$1,028,564,055	$10.59
Net State indebtedness (less sinking funds), June 30, 1913	345,942,305	3.57
Net indebtedness of 146 cities (less sinking funds), June 30, 1912	*1,932,547,523	$70.47
	$3,307,053,883	

*Of this amount $792,927,021 ($156.57 per capita) was the indebtedness of New York City alone.

Interesting details of the National and State debts are given in a summary of the full bulletin on the subject, which has just been issued by the Bureau of the Census. This summary is therefore given here in full:

* * *

The full report on National and State indebtedness and funds and investments from 1870 to 1913 has just been issued by Director William J. Harris, of the Bureau of the Census, Department of Commerce. The bulletin gives information for the United States as a whole and for each State separately, and it is now ready for distribution.

According to this bulletin, the total debt of the forty-eight State Governments on June 30, 1913, amounted to $422,796,525. Of this total, $403,366,569 represented funded debt, and $19,429,956 represented floating debt. Of the funded debt, $364,836,427 are represented in bonds and $38,530,142 are special debt obligations to public trust funds. As an offsetting item against this total debt, the forty-eight States reported $76,980,571 in sinking fund assets, leaving their debt (less sinking fund assets), $345,942,305. The per capita debt for the forty-eight States amounted to $3.57 on June 30, 1913.

In contrast with the debt of the forty-eight State Governments, the National Government had a total debt on June 30, 1913, of $2,916,204,914. Of this total, the funded debt amounted to $2,540,-523,329, while the floating debt amounted to $375,681,585. Of the funded debt, the bonded indebtedness amounted to $967,366,160, while the special debt obligations amounted to $1,573,157,169. The sinking fund assets, or cash in the United States treasury available for the payment of debt, consisting of accumulated trust funds, gold and silver and general treasury cash, not only were sufficient to eliminate entirely the special debt obligations, but also to reduce the bonded debt. The National debt, less cash in the Treasury available for the payment of debt amounted to only $1,028,564,055, or a per capita debt of $10.59.

The net debt of the National Government represents three times the total net debt of the State Governments. Of the total per capita debt of $14.15 (National and State), the debt of the National Government is $10.59, or 75 per cent, while the debt of the State Governments amounts to $3.57, or 25 per cent of the total.

History of the National Debt.—The debt of the National Government was higher in 1870 than at any time since that date; the per capita debt that year being $60.46. This amount, though large, was a material decrease over the debt as it stood August 31, 1865. On that date the indebtedness of the National Government (less funds available for the payment of debt) amounted to $2,766,431,-571, an average of $79.44 for every inhabitant of the country. The rate of decrease between 1865 and 1870 was continued until in 1880 the indebtedness of the National Government had decreased so that, together with the rapid increase in the population, the per capita debt had been reduced to only $38.27. Ten years later (1890) it had been reduced to $13.60, at which point it remained with only comparatively slight fluctuations, increasing somewhat during the Spanish-American war and decreasing somewhat since that date, until, at the latest date reported (1913), the indebtedness of the National Government amounts to only $10.59 per capita, an amount slightly higher than in 1907, when the per capita indebtedness was $10.05, the lowest recorded.

No data are available to show the debt of the forty-eight State Governments, or the territory from which they have been formed, in 1865; but in 1870 the indebtedness of the State Governments, less sinking fund assets, was $352,866,698, or $9.15 per capita. The indebtedness of the State Governments decreased in somewhat the same proportion as the indebtedness of the National Government, and in 1880 the per capita debt for the forty-eight State Governments was $5.48. Ten years later (1890) this had been reduced to $3.37. Further fluctuations during the last twenty years brought the per capita down to $2.67 in 1909, the lowest amount shown in the period covered. Since 1909 there has been some increase, the per capita debt for the forty-eight State Governments being $3.57 on June 30, 1913.

Although there is a net decrease during the period covered in the actual outstanding indebtedness, the material part of the de-

crease in per capita debt, both for the National Government and the forty-eight State Governments, is due to the very material increase in population, amounting to 138.5 per cent in the period named. Considering the total debt for the National Government and the forty-eight State Governments, the total amount outstanding decreased from $2,684,036,654 in 1870 to $1,374,506,360 in 1913, a decrease of almost 50 per cent. In contrast, the per capita debt decreased from $59.61 in 1870 to $14.15 in 1913 (almost 80 per cent), the lowest point reached being in 1907, when it amounted to $12.74.

The figures in the report show that Arizona and Massachusetts are the only States where the State debt, less sinking fund assets, amounts to more per capita than $10.59, the per capita debt for the United States. The debt of the National Government, therefore, is a greater financial weight upon the people of every State in the Union (excepting these two) than is the debt of the State in which they live. In only a very small number of States does the per capita State debt amount to one-half the per capita debt of the National Government. New York, for example, has a per capita State debt of $9.05, due largely to the cost of the Erie Canal; while other States show a very low per capita debt,—for Oregon it being only $0.04; for Kansas, $0.14; for Iowa, $0.16; for New Jersey, $0.24; while for Pennsylvania it is nothing, since in that State the sinking fund assets exceed the total debt.

TEN YEARS' GROWTH IN THE COMMONWEALTH OF AUSTRALIA

[From "The Australasian Insurance and Banking Record"]

THE Bulletin just issued by the Commonwealth Bureau of Statistics on the production of Australia is of supreme importance, furnishing, as it does, the best material for a study of the growth of the resources of the Commonwealth. Summarizing the figures for ten years, from 1903 to 1912, it is necessarily a publication of considerable volume. There are twelve sections, containing in all 187 tables, the subjects being:

I. Land Settlement.
II. Agriculture.
III. Pastoral Products.
IV. Farmyard and Dairy Products.
V. Mineral Products.
VI. Forestry.
VII. Fisheries.
VIII. Manufacturing.
IX. Value of Production.
X. Bounties.
XI. World's Gold Production.
XII. Statistical Summary, 1860-1912.

The tables are practically exhaustive, leaving no room for further investigation. They might have been made more valuable by the addition of the figures for 1902, which would have facilitated a decennial comparison. We will, however, deal with them in the form and the order in which they are presented.

I.—LAND SETTLEMENT.

The total area of the Commonwealth is estimated at 1,903,731,840 acres. The area alienated, in process of alienation, leased or licensed, Crown lands, and other Crown lands as at 31st December, 1903, 1911, and 1912 are stated as follows:

	1903, Acres.	1911, Acres.	1912, Acres.
Alienated	80,236,068	100,713,498	102,154,452
In process of alienation	34,828,805	46,479,854	50,735,129
Leased or licensed Crown lands	748,662,720	822,440,546	847,651,820
Other Crown lands	1,039,004,247	934,097,942	903,190,439

For the last three years the increases under the first, second and third headings are as follows:

	1910, Acres.	1911, Acres.	1912, Acres.
Alienated	2,585,322	4,562,643	1,440,954
In process of alienation	3,720,261	1,730,796	4,255,275
Leased or licensed	20,071,143	6,502,309	25,211,274

Alienation has been proceeding at a rather rapid rate during the past nine years. The proportions of total area for the several States, as at 31st December, 1912, are approximately as follows: New South Wales, 28¾ per cent; Victoria, 55 per cent; Queensland, 6 per cent; South Australia, 5 per cent; Western Australia, 3½ per cent; Tasmania, 37½ per cent.

The number and area of private holdings in five States (Queensland not being included) and the Territories are given in Table No. 3. The figures for the last three years compare as follows:

NUMBER OF HOLDINGS.

Acres.	1910-11.	1911-12.	1912-13.
1 and under 50	68,359	69,577	72,751
50 and under 100	20,384	20,465	21,058
100 and under 500	62,437	63,389	65,267
500 and under 1,000	22,952	23,809	26,591
1,000 and under 5,000	17,049	18,315	19,948
5,000 and under 10,000	1,395	1,502	1,567
10,000 and under 20,000	659	693	689
20,000 and under 50,000	382	371	361
50,000 and over	111	95	95
Totals	193,728	198,216	208,327

AREA OF HOLDINGS.

Acres.	1910-11. Acres.	1911-12. Acres.	1912-13. Acres.
1 and under 50	1,036,050	1,040,658	1,093,524
50 and under 100	1,561,397	1,568,391	1,616,473
100 and under 500	15,856,055	16,131,260	16,647,036
500 and under 1,000	16,347,267	16,880,187	18,997,616
1,000 and under 5,000	32,125,887	34,432,276	37,523,232
5,000 and under 10,000	9,573,012	10,351,070	10,754,656
10,000 and under 20,000	9,085,546	9,675,578	9,514,769
20,000 and under 50,000	11,334,787	11,105,180	10,408,407
50,000 and over	10,174,828	8,469,431	8,418,308
Totals	107,099,829	109,654,031	114,974,021

As was to be expected, the principal increase is in holdings of from 500 to 5,000 acres. They now amount to 56,520,848 acres, or 49.16 per cent of the total area, as against 46,148,654 acres, or 44.14 per cent of the total two years ago. The holdings of 20,000 acres and more now amount to 18,826,715 acres, or 16.37 per cent as against 21,466,169 acres, or 20.53 per cent two years ago. So far as the decrease is the effect of the land tax, the Labour party may congratulate itself upon its success in diminishing the number of valuable clips of fine wool without any compensating advantage.

The second division of the Bulletin relates to agriculture. Under the three general headings: Fallow, permanent artificially-sown grasses, and crops, the areas for all States for the last three seasons are summarized as follows:

	1910-11. Acres.	1911-12. Acres.	1912-13. Acres.
Fallow	3,338,207	3,534,940	4,330,138
Grasses	2,714,691	2,869,866	2,987,419
Crops	11,893,838	12,107,017	13,038,049
Totals	17,946,736	18,511,823	20,355,606

For the last season an increase of 1,843,783 acres is shown, as against one of only 565,087 acres for the previous season. The increase is almost entirely under the headings Fallow and Crops, the latter heading accounting for 931,032 acres. But when we come to analyse this increase, the position revealed is not altogether

satisfactory. The following is a summary for the last three seasons:

	1910-11. Acres.	1911-12. Acres.	1912-13. Acres.
Wheat	7,372,456	7,427,834	7,339,651
Other cereals	1,210,287	1,079,236	1,377,843
Hay and green forage	2,633,267	2,942,728	3,644,797
All other crops	677,828	657,219	675,758
Totals	11,893,338	12,107,017	13,038,049

Apart from wheat and food destined chiefly for animal consumption, agriculture practically makes no headway in Australia. Wheat only is an export staple. Under the heading Agriculture there are no less than fifty-eight tables generally of a very elaborate description.

II.—PASTORAL PURSUITS.

This section of the Bulletin commences with a statement of the numbers of the live stock in the Commonwealth. The totals as at 31st December, 1903, 1911, and 1912 are stated as follows:

	1903.	1911.	1912.
Horses	1,546,054	2,279,027	2,408,113
Cattle	7,247,508	11,828,954	11,577,259
Sheep	56,932,705	93,003,521	83,263,686
Pigs	837,368	1,110,721	845,255

During 1912 the losses, excepting of horses, principally from drought, were serious, but for the nine years covered by the foregoing figures large increases are shown.

The quantity of wool produced during the last eleven years is estimated as follows: 1903, 414,120,000 lbs.; 1904, 473,598,000 lbs.; 1905, 522,062,000 lbs.; 1906, 577,673,000 lbs.; 1907, 690,139,000 lbs.; 1908, 642,184,000 lbs.; 1909, 718,037,000 lbs.; 1910, 792,868,000 lbs.; 1911, 758,090,000 lbs.; 1912, 785,753,000 lbs.; 1913, 668,667,000 lbs. There appears to be some doubt as to the accuracy of these figures, but it must be admitted that there are great difficulties in the way of arriving at exactitude. But the movements from year to year are approximately indicated.

One of the tables shows the value of the principal pastoral products exported from the Commonwealth from 1903 to 1912. For 1903, 1911, and 1912 the figures are as follows:

	1903.	1911.	1912.
Wool	£14,001,599	£26,061,687	£26,354,563
Sheepskins	1,070,662	1,614,411	2,003,592
Tallow	308,465	1,936,599	1,549,694
Meats	1,771,409	4,054,578	4,466,861
Other enumerated articles	933,676	2,173,792	2,850,907
Totals	£18,085,811	£35,841,067	£37,225,617

The total has more than doubled from 1903 to 1912, showing how greatly the welfare of the Commonwealth is dependent upon the pastoral industries. Prices have generally risen in higher proportions than quantities.

III.—Farmyard and Dairy Products.

The principal tables in this section are those relating to the number of dairy cattle and the production of butter. The following are the totals under these headings for the years 1903, 1911 and 1912:

	1903.	1911.	1912.
Number of dairy cattle	1,270,787	2,120,469	2,086,885
Butter produced, pounds	100,332,000	211,573,000	187,194,000

Here, again, an enormous development is indicated.

IV.—Mineral Production.

The values of the principal minerals produced in the Commonwealth in the three years are summarized in the following table:

	1903.	1911.	1912.
Gold	£16,234,684	£10,551,624	£9,879,928
Copper	1,788,697	2,564,278	3,244,550
Lead, silver-lead, and silver	2,112,212	3,021,284	4,219,013
Tin	770,779	1,209,973	1,348,992
Zinc	87,833	1,415,169	1,766,459
Coal	2,616,859	3,923,673	4,418,025
All other	479,436	788,210	752,271
Totals	£24,150,500	£23,480,211	£25,629,238

Apart from gold mining, a very great development has taken place, but to a considerable extent it has been due to a rise in market values.

With the exception of Manufactures the rest of the sections are of minor importance. As regards the exception, it must be a matter of great difficulty to arrive at a close approximation.

The estimated total value of the production of the whole of the Commonwealth for the last three years is stated as follows:

	1910.	1911.	1912.
Agricultural	£39,752,000	£38,774,000	£45,754,000
Pastoral	56,993,000	50,725,000	51,615,000
Dairying, etc.	17,387,000	19,107,000	20,280,000
Forestry and fisheries	4,789,000	5,723,000	6,432,000
Mining	23,215,000	23,480,000	25,629,000
Manufactures*	45,598,000	50,767,000	57,022,000
Totals	£187,734,000	£188,581,000	£206,732,000

*Net after deducting cost of materials.

The foregoing figures can hardly be accepted as perfectly accurate, but they are, no doubt, pretty close approximations. They indicate steady progress in the industrial development of the Commonwealth.

CLEARING HOUSE CERTIFICATE ISSUES IN THE UNITED STATES FROM 1860 TO 1914

The New York "Sun," in a recent issue, has published a brief history of the various occasions on which the bankers of the United States have felt it advisable to resort to the issue of clearing house certificates to relieve financial tension. It is as follows:

There are two kinds of clearing house certificates, those issued on the deposit of gold coin and those issued on the deposit of collateral securities. Clearing house loan certificates are temporary loans made by the banks associated together as a clearing house association to the members for the purpose of settling clearing house balances.

Following a resolution of the New York Clearing House the first loan certificates were issued on November 23, 1860. This issue aggregated $7,375,000 and the last certificate was cancelled March 9, 1861. The relief thus obtained was only temporary, as the Civil War followed closely on the heels of the issue. In September of 1861 another issue was made, and again in 1863 and 1864. The amounts of the last named three issues were respectively, $22,585,000, $11,471,000 and $17,728,000. No more loan certificates were issued until 1873 during the panic following the Franco-Prussian War. That issue amounted to $26,410,000. Philadelphia, Boston, Baltimore and other financial centres took similar measures.

The next report of clearing house certificates was in 1879, when New Orleans made an issue of $54,000. In 1884 New York made another issue this time amounting to $24,915,000. In 1890 there was an issue of $16,645,000; in 1893, $41,490,000. There were small issues in Boston and Philadelphia in 1895 and 1896. Between October, 1907, and March, 1908, there was a very large issue which aggregated $101,060,000. This was the last issue until that authorized on August 2, 1914.

INDUSTRY, COMMERCE AND FINANCE

European Bank Rates.—The following are rates of the fourteen [illegible] banks with the date of the last change:

Banks of	Rate	Date of Last Change.
England	5	Aug. 6, 1914
France	5	Aug. 6, 1914
Germany	5	Aug. 1, 1914
Holland	6	Aug. 1, 1914
Belgium	7	Aug. 3, 1914
Austria	8	Aug. 3, 1914
Italy	5	May 9, 1914
Russia	6	July 29, 1914
Switzerland	5½	Aug. 1, 1914
Denmark	7	Aug. 4, 1914
Spain	4½	Sept. 24, 1903
Portugal	5½	Jan. 15, 1914
Sweden	5½	July 30, 1914
Norway	6½	Aug. 4, 1914

* * *

Metal Mining in the Eastern States.—The value of the mine output of gold, silver, copper, lead, and zinc in the Eastern or Appalachian States in 1913, according to H. D. McCaskey, of the United States Geological Survey, was $13,753,557, against $13,470,376 in 1912 and $11,787,942 in 1911. The figures for 1913 represent the production of ninety mines, of which forty eight were gold placer mines (many of them small), nine zinc mines, and seven copper mines. The total recovery of gold was less, but the yields of silver, lead, copper, and zinc were larger, in 1913 than in 1912.

The gold output from all mines was 8,017.33 fine ounces valued at $165,733, a decrease of 2,715.91 ounces in quantity and of $56,763 in value from the production of 1912. The silver output, recovered entirely as a by-product in refining the gold and copper produced, was 111,214 fine ounces, valued at $67,173, an increase of 14,691 ounces in quantity and of $7,812 in value. Of the gold output in 1913 the placers yielded 733.65 ounces, against 774.83 ounces in 1912, and the quartz or deep mines produced 6,892.09 ounces, against 9,302.99 ounces in 1912. The copper mines produced 443.50 ounces in 1912 and 391.59 ounces in 1913. Of the forty-eight producing gold placers in 1913, there were twenty seven in Georgia, seventeen in North Carolina, and four in South Carolina. There were 18,883 short tons of siliceous ore sold or treated from Appalachian gold mines in 1913, of which 11,186 tons were from North Carolina, 1,068 tons from Alabama, 2,614 tons from Georgia, and 1,010 tons from South Carolina.

The output of siliceous gold ore in 1913 was about 15,000 tons less than in 1912, and the gold from deep mines decreased about 2,100 ounces.

The average recovery of gold (including nominal recovery of silver) per ton of siliceous ores treated in the Eastern States in 1913 was $7.06. The average in Alabama was $2.71, in Georgia $2.51, and in North Carolina $10.83.

The copper production in 1913 was 19,961,229 pounds, valued at $3,094,723, a decrease of 688,784 pounds in quantity, but a decrease of $81,210 in value. Of the total output 19,390,750 pounds came from [illegible] of Eastern Tennessee, from 652,[illegible] short tons of siliceous ores were treated. The remainder was [illegible] from [illegible] in the Cornwall iron mines, magnetic [illegible] in Lancaster [illegible] as results in the recovery of copper [illegible]. Virginia also contributed to the copper output, and Maryland and North Carolina, which were producers of copper in 1912, reported no output of copper in 1913.

The production of lead was 1,632,000 pounds, valued at $71,808, an increase of 1,070,974 pounds in quantity and of $46,562 in value. The production was derived from the lead-zinc mines of Wythe County, Va.

The zinc output, figured as spelter, was 184,898,400 pounds, valued at $10,354,310, an increase of 40,198,537 pounds in quantity and $370,019 in value. Of the total production, 168,244,000 pounds, valued at $9,421,664, came from the zinc mines at Franklin Furnace, N. J., and over 11,000,000 pounds came from Eastern Tennessee. About 5,400,000 pounds was produced in Virginia, and smaller quantities in North Carolina and New Hampshire.

* * *

The Production of Millstones.—The production of millstones and related quarry products—burrstones, chasers and drag stones—in the United States in 1913 amounted to $56,163 in value, a decrease of $15,251 compared with the value in 1912. The production of millstones in this country in 1913 was nevertheless larger than in all but three years since 1888, when it was valued at $81,000. Millstones were produced in 1913 in Alabama, New York, North Carolina, Pennsylvania and Virginia.

* * *

The Budget of Turkey.—The proposed Turkish budget for 1915, just submited to Parliament by the Finance Minister, represents a total of $290,086,641, of which $140,453,117 is receipts and $149,633,524 is expenditures. The deficit therefore is $9,180,407, as compared with $15,840,000 in each of the two preceding years.

The principal items of expenditure provided for in the new budget are as follows: Public debt, $66,135,205; Ministry of War, $26,400,000; Ministry of Finance, $10,487,663; gendermerie (police), $9,815,168; Ministry of Marine, $5,891,301; Ministry of the Interior, $4,596,470; postal service, telegraph, and telephone, $3,186,584; Ministry of Justice, $2,944,924; Ministry of Public Works, $2,452,223; Ministry of Public Instruction, $2,440,206.

* * *

Fuel Production in Germany.—The production of fuel in Germany during the first five months of 1911 was as follows: Coal, 79,132,000 metric tons against 77,648,000 tons in the corresponding period of 1913; coke, 13,309,000 tons, against 13,333,000 tons in 1913; lignite, 37,193,000 tons, against 35,041,000 tons in 1913; briquets, 12,110,000 tons against 10,965,000 tons in 1913.

* * *

The Population of Buenos Aires.—Figures of the census of the city of Buenos Aires, recently taken, show the number of inhabitants to be 1,560,163. In 1900 the total was 821,291.

* * *

Russian Industrial Statistics.—The number of manufacturing establishments (exclusive of mines) under factory inspection in Russia was 17,356 in 1912, with 2,151,191 operatives, as against 16,600, with 2,051,198 operatives in 1911.

A comparison of the wages paid to operatives shows that the aggregate earnings in establishments where fines are in force amounted to $196,730,000 in 1912, this being an increase of $6,180,000 as compared with the $190,550,000 earned in 1911, while the average earnings per operative rose from $129 in 1911 to $131 in 1912.

If the average earnings per operative in establishments where fines are not enforced are the same as in establishments where

operatives are fined, the total earnings of all operatives for 1912 amounted to $282,735,000, or an increase of $17,510,000 over 1911 ($265,225,000).

The factory statistics for 1908, as reported by the Ministry of Commerce and Industries, show that the aggregate annual production of all establishments (including mines and metal works) amounted to $2,218,105,000. The output for 1912 of the factories and works employing 2,151,000 operatives was estimated by the same ministry at $2,644,010,000. The net production, after deducting the cost of materials and fuel, was calculated at $761,260,000 for 1908, and at $910,520,000 for 1912.

* * *

The Trade of Dutch Guiana.—The trade of Dutch Guiana, in 1913, amounted to $6,661,625, of which $2,859,595 represented imports and $3,802,030, exports; as compared with a total, for 1912, of $6,367,475, imports being valued at $3,012,605 and exports at $3,354,870. The following table shows the principal countries of origin and destination in 1913:

Countries.—Imports.	Value.	Countries.—Exports.	Value.
Netherlands	$1,600,986	Netherlands	$1,507,116
United States	669,476	United States	1,365,207
British Guiana	414,836	United Kingdom	450,122
French Guiana	67,956	British Guiana	330,668
All other countries	106,341	France	81,493
		All other countries	67,424
Total	$2,859,595	Total	$3,802,030

* * *

The Trade of Portuguese East Africa.—The total imports of Portuguese East Africa in 1913 amounted to $12,678,336, as compared with $13,483,297; exports, $5,346,243 as against $6,229,276 in 1912; re-exports, $8,935,355, an increase from $6,294,516 in 1912; transit trade, $34,044,435 as compared with $32,322,748 in 1912; and total trade, $61,004,369 against $58,329,837 in 1912.

* * *

Production of Abrasive Garnet.—The production of abrasive garnet in the United States in 1913 amounted to 5,308 short tons, valued at $183,422, according to the United States Geological Survey. This was the largest in the history of the industry and an increase of 361 tons in quantity and of $20,185 in value, compared with the production for 1912. The industry was confined to three States—New Hampshire, New York, and North Carolina.

MOVEMENT FOR THE COMPILATION OF NATIONAL FIRE STATISTICS IN THE UNITED STATES

AS the result of an expert study of the losses and fire dangers of the country, the Actuarial Committee of the National Board of Fire Underwriters has recommended to that organization the establishment of a special bureau to make reports to the State Governments on behalf of the various companies. The report of the committee, which is now under consideration by the Executive Committee of the National Board of Fire Underwriters, gives this tentative proposition:

"First, a complete and carefully compiled record of all fire losses upon insured property in the United States, with information regarding location and character of property, values, insurance, origin of fires, etc., thus enabling the board to report to such States as may require, a complete list year by year of the losses occurring therein, with correlative facts.

"Second, for the investigation of fire dangers to which each class of property is subject, and the development of thorough and scientific information concerning the causes of fire and their prevention, and, third, for a complete record of claimants."

Ellis G. Richards, president of the Commonwealth Insurance Company, who is chairman of the Actuarial Committee, says of the recommendations:

"It is hoped and intended that such a department of the National Board once created shall become a real factor in reducing the fire waste of the country, as well as a valuable colleague to the Committee on Construction of Buildings, the Committee on Fire Prevention, and the Incendiarism and Arson Fund Committees, all of which are already established departments of the National Board.

"To accomplish these objects will require large appropriations of money by the fire insurance companies, and in carrying on such a work co-operation from State and local authorities is most important.

"It is desired by this committee, that, if possible, assurance be obtained from State officials having supervision of or responsibility for such matters, that when such a loss bureau as now suggested has been established by the National Board of Fire Underwriters, and such bureau is in efficient operation, in place of the present burdensome requirements upon the individual companies for reports of fire insurance losses, etc., may be substituted on behalf of its members an annual report by the National Board to each State so requiring, which shall embrace all necessary information concerning fires occurring therein.

"It would not be reasonable to expect the National Board to assume the necessary work and expense incident thereto in the absence of specific assurance on the part of the supervising officials hereinbefore indicated. We also urge upon those officials the importance of State laws requiring full reports from property owners of all losses, insured or uninsured, to State or local officials such reports to be quite independent of any received by the companies from their claimants."

In this connection the committee further recommends that the National Board begin the preparing of a standard form of classification of fire hazards of the United States, together with some feasible plan for schedule rating founded upon the combined classified experience of its members, which shall be national in its scope and justify general recognition as a conclusive and scientific system. Anticipating the difficulties of making a standard rating schedule, the Actuarial Committee, which is composed of Mr. Richards, C. H. Coffin, J. H. Stoddard, F. C. Buswell, H. A. Smith, C. D. Dunlop, and George W. Babb, says:

"It is the marked inequalities, inconsistencies and unreasonable discrimination of rates and methods in various States of this nation that have caused and have justified State regulation. Here you have the 'look in' of a State official. How then are we to meet these conditions in a way to solve the problem of rate-making, in order that the soundness of our methods may be provable and rate-making taken out of the hands of the theorist, the inexperienced and the politician, in no less degree than are the rates of the life insurance companies?"

The first step toward accomplishing the reform, the committee suggested, necessitated expert and scientific study of the whole situation, and their recommendation for placing the subject before a special committee for consideration has been complied with and the work is now in progress.

A special meeting of the National Board will be called if the work is concluded sufficiently in advance of the regular annual meeting for the board to give its approval to the recommendations, which the fire insurance men consider one of the most important features now affecting the national fire business.

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

LAST week it was noted on this page that marine insurance had emerged from its customary inconspicuous and unobtrusive position as a handmaiden of commerce and had become the mistress of the great world of finance, as well as commerce. The public suddenly found out that without the assistance of marine underwriters it could not go on with the interchange either of goods or of money between most of the nations of the world. The vast war which has blazed up in Europe, including now all the greatest commercial nations of that Continent, has produced a war risk, the like of which has never been known to men. Even in the old piratical days, when the pursuit and capture of the great galleons of Spain, laden with the gold and silver bullion of Mexico and Peru, was the favorite pastime, not only of pirates and buccaneers proper, but of adventurers of a much higher class, like Drake and Raleigh, it is improbable that the actual war risk on one of those galleons was as high as has been that on one of our giant modern steamships, laden with gold from America to some European country, during the past week. The substitution of cargo intrinsically less valuable, like wheat or cotton, even under the international agreements making these commodities non-contraband of war, has really made little difference in the risk, as measured by the minds of men engaged in commerce, on the one side, and in marine insurance, on the other. As day after day has gone by and nation after nation in Europe has been drawn into the dreadful struggle by alliance or ultimatum or violated territory, the war risk has increased, not arithmetically but geometrically, until at last the marine underwriters have been compelled to withdraw almost completely, finding that their capital did not suffice for the undertaking of even a small portion of the risks offered to them. Hence virtually all commerce on the high seas has been brought to an end for lack of marine insurance, and for the first time in the memory of living men is to all intents and purposes non-existent to-day.

It is a matter of simple economics that the reason why marine underwriters have been compelled to give over attempting to insure the marine risks that are pressed upon them is that the capital at their disposal is totally insufficient for what they are called upon to undertake in such an emergency as the present. There is, of course, some rate based upon some average which should make marine underwriting sound business even under these circumstances. To be sure, there is now no experience in existence to serve as a sure guide, and the pure cost of the insurance would have to be arrived at tentatively and through having the existing conditions continue long enough to build up a trustworthy experience. It is the case, however, in dealing with insurance problems that the adequacy of capital employed to amount at risk is just as important as the correlation of rate to experience (translated into premium). And it is another economic principle that the amount of capital employed in a given department of business will always tend to be just the amount that is required and can be remuneratively employed in that business when its condition is normal. Great emergencies, therefore, affecting a given department of business, always and necessarily find it unprepared, in respect of available capital, to meet them. And the process of getting new capital into any department of business is difficult and slow. It is out of the question to obtain it off-hand, just because it is suddenly needed. Marine underwriters have gathered for their use as the years have gone by capital enough to enable them to assume the risks of the sea for the continually expanding commerce of the world; but they could not, as a matter of pure business, keep a special hoard of capital, like Germany's war hoard of gold in the Julius Tower, to be used for underwriting the risks to which commerce is exposed by a war among the majority of the great commercial nations of the world.

It is fortunate that the world is so ordered that these great emergencies of war come only at intervals of long years. But they do come, despite all the supposed influence of civilization upon the war-like passions of nations and the apparent progress of the propaganda of universal peace, so striking during periods of peace. At the same time, the reliance of society upon insurance in all its various forms grows greater year by year. In some way a means of accommodation must be found between this comparatively recent social function of insurance and the catastrophic struggles into which we know mankind or large portions of mankind will certainly enter from time to time. For all normal periods insurance predominantly conducted by private initiative, and providing just the supply to meet the demand, is superior in every way to insurance provided otherwise. But, as we have seen, private insurance must always fail to be adequate to what is needed in periods of world-wide disturbance which recur only at intervals of one or more generations.

What, then, is to be done about it? The world needs marine insurance, life insurance, fire insurance, accident insurance to run right on through any and every kind of times, always sufficient to indemnify the losses incurred. How can this be accomplished? It would seem that the British Government has pointed out the only possible way, when this week it undertook to assume the marine war risk on all grain ships laden with wheat for the United Kingdom, up to 80 per cent of the value of ship and cargo. Only compulsory bringing the public at large in as underwriters, forced by the power of taxation to support such losses as occur, is adequate to provide capital commensurate with the amount at risk in such a case as now presents itself. And it may be assumed that, if the war in Europe is of long duration, the principle will have to be extended to many other commodities besides wheat. Thus the moving of the American cotton crop, which is about to begin, is a national question for the United States, which has not immediate resources to support the entire load of it for any long time, and is at the same time a national question for great cotton-consuming countries like England, which must have the cotton or see large portions of the population deprived of their livelihood and reduced to starvation. As things now are all the capital of all the marine underwriters would be inadequate to warrant them in insuring the cotton alone which must somehow be exported from the United States during the next four months, supposing the war to continue so long as that and supposing no one of the warring nations to get effective command of the sea. It will not be surprising, therefore, if as a part of the plans which are now under consideration among merchants, bankers and officers of the National Government for providing the usual outlets for our cotton, as well as our wheat and other crops, a scheme of insurance against the war risk, perhaps international in character, is found to be included.

Seamen and the Workmen's Compensation Laws in the United States

THE question of the effect of State workmen's compensation laws upon the relations between seamen and their employers, whether engaged in intrastate or interstate commerce, is complicated by the intrusion of the maritime law. In giving a general survey of the subject a further complication also arises in that the State laws are not uniform, some being elective and some compulsory in respect of the theory on which they are drawn. In the former case, the benefits under the acts may be considered as being in substance contractual rights, but in the latter they are purely statutory. Mr. Harry B. Bradbury, in discussing the theory of workmen's compensation ["Extra-Territorial Effect of Workmen's Compensation," MARKET WORLD AND CHRONICLE, Vol. VI, page 654 ff.], says: "Workmen's Compensation statutes usually, although not universally by any means, have been understood to create contractual relations between employers and employes. * * * In those States where compulsory acts are in force, it may, perhaps, be said that there is no contract between the employer and the employe, but that a specific duty is imposed upon the employer by force of the statute. In those States where elective laws are in force it would appear that the right to compensation depends upon an implied contract between the employer and the employe. (*Decny vs. Wright & Cobb Lighterage Co.*, 36 N. J. Law J. 121). In a decision recently rendered by Judge Killets (*George Schuede vs. The Zenith Steamship Co.*, U. S. District Court, Northern District of Ohio, Eastern Division, No. 8694) it is stated that: "A State may not pass any act which abridges or enlarges the responsibilities of duties of maritime law; rights in admiralty cannot be affected by State enactment." (*The Moses Taylor*, 4 Wallace 411; *The Hine vs. Trevor*, 4 Wallace, 555; *Butler vs. Boston Steamship Co.*, 130 U. S., 527; *Workman vs. New York*, 179 U. S. 552.) And again: "As we look at it, the provisions of the law maritime as to the relation of a seaman to his employment are part of the substance and obligations thereof, which cannot be modified by State law, even through recourse to the saving clause of the code."* But: "It is worthy of note that in all these cases from one of the earliest (*Steamship Co. vs. Chase*, 16 Wall 552) to the latest (*The Hamilton*, 207 U. S., 398-404, and *Thompson Towing and Wrecking Ass'n vs. McGregor*, 207 Fed. 209), the application of State laws is sustained, not because such laws can be utilized in all cases when a suitor prefers to enter a State court, but because 'where no remedy exists for an injury in the admiralty courts; the fact that such courts exist and exercise jurisdiction in other causes of action leaves the State courts as free to exercise jurisdiction in respect to an injury not cognizable in the admiralty as if the admiralty courts were unknown to the Constitution and had not existence in our jurisprudence.' (*Steamboat Co. vs. Chase, supra.*) In admiralty no remedy exists for a death resulting from a maritime tort."†

The opinions of the two authorities cited seem to be well founded, and apparently under an elective compensation law the following would be the situation: If the employer and employe choose to come under the law, they may do so and the compensation provisions will apply, because the parties have in effect written those provisions into their contract of employment. If, however, the parties refuse the law, their status is exactly the same as if the law had not been passed, except in case of death; for a State has not power to modify the relations between seamen and their employers, where the maritime law has already made provision. In cases of death to seamen all the provisions of the compensation law would apply. That is: (a) If the employer elects not to come under the law, he may be sued for damages at common law with his ordinary common law defenses of fellow servant, contributory negligence and assumption of risk abrogated; (b) if the employe elects not to come under the act his dependents may sue for damages at common law, but all the common law defenses may be used in defending the suit.

It would appear that most of the compensation laws could be held effective in part in this way, although no specific provision is made in them for such a contingency, since most of the laws provide, as does the New York act, that: "If any section or provision of this chapter be decided by the courts to be unconstitutional or invalid, the same shall not affect the validity of the chapter as a whole or any part thereof other than the part so decided to be unconstitutional or invalid." (Chapter 816, Laws of 1913, New York State, as re-enacted and amended, Article 6, Section 118.)

Under a compulsory workmen's compensation act‡ the situation would be less flexible. Here, apparently, the act would under no circumstances apply in cases of injury to seamen, because a State seems to have no power to impose a statutory right in conflict with the maritime law. In cases of death, however, the act would seem to apply in every particular, even to the provision for penalty to the employer if he does not properly insure, because the maritime law makes no provision for recovery by dependents in cases of accidental death to marine employes. This whole question has, of course, still to be settled by the courts before any certainty can be felt as to the outcome. On the face of it, however, the above would seem to be the reasonable hypothesis.

There is, however, another contingency which must be taken into consideration before it can be said that any preponderant probability has been reached as to the ultimate settlement of the problem. The question has been raised whether the enactment of a compulsory workmen's compensation law may be considered as coming within the police power, as reserved to the States by the Federal Constitution; and, if so, whether the States have the right to enforce the police power even in contravention of the maritime law. Definition of what may and what may not be considered as coming within the police power must of necessity be extremely elusive. In *Ives vs. South Buffalo Railway Co.* (20 N. Y., 271, 94 N. E. Rep. 431), Judge Werner said: "In order to sustain legislation under the police power the courts must be able to see that its operation tends in some degree to prevent some offense or evil, or to preserve public health, morals, safety and welfare." It

*Paragraphs 3, respectively, of sections 24 and 256 of the Judicial Code of the United States (Act of March 3, 1911, sec. 711, R. S. U. S.) provide for a saving to suitors, against the exclusive jurisdiction of admiralty, "in all cases the right of a common law remedy, where the common law is competent to give it." This Judge Killets takes to mean (in conformity with justice Field in the Moses Taylor case, supra) that "the suitor who has a right of action growing out of a maritime contract may not go into a law court to find a new remedy, but he may employ a common law forum, if one is found competent to work out the rights involved in his contract."

†See also Cornell Steamboat Co. vs. Fallon, 179 Fed., 293, Circuit Court of Appeals, Second Circuit.

‡The New York Workmen's Compensation Act is the only State compensation act under which this question would arise, for the only other compulsory act now passed (Washington) is so framed as not to apply to marine employes.

is true that with this dictum in mind Judge Werner in the same case ruled that the original New York workmen's compensation act (Laws of 1910, ch. 674) did not come within the police power and that the law could not be sustained through pleading the exercise of that power. At a later date, however, the Supreme Court of Washington sustained the compulsory compensation law of that State purely as a proper exercise of the police power. (*State ex rel. Davis Sash Co. vs. C. H. Clausen as State Auditor*, 117 Pac. Rep. 1101; Bradbury, "Workmen's Compensation and State Insurance Law," 1st Edition, p. 703 ff.)

Assuming that the more recent decision should be held by courts of last resort of other States to govern, there nevertheless does not seem to be any ground for believing that a State law, even though passed under the police power, would be held to supersede the maritime law, which is Federal and not State and solely under the administration of the Federal courts. In *Sinnott vs. Davenport* (22 How., 242-243) the Supreme Court stated that: "The nullity of any act inconsistent with the Constitution is produced by the declaration that the Constitution is the supreme law. The appropriate application of that part of the clause which confers the same supremacy on laws and treaties, is applicable to such acts of the State legislatures as do not transcend their powers, but, though enacted in the execution of acknowledged State powers, interfere with or are contrary to the laws of Congress, made in pursuance of the Constitution, or some treaty made under the authority of the United States. In every such case the act of Congress or treaty is supreme; and the law of the State, though enacted in the exercise of powers not controverted, must yield to it." [See also *Connolly vs. Union Sewer Pipe Co.* (184 U. S. 558) and *Crutcher vs. Kentucky* (141 U. S., 59, 60).] There can be no doubt that the supervision and control of the whole subject of navigation is vested in Congress (Elliot, Deb., V, p. 548; Curtis, Const. Hist., Vol. I, p. 551); hence a reasonable certainty appears to be established as regards this question.

The points so far touched on concern themselves purely with the primary application of workmen's compensation laws, as affecting maritime employes, whether these be engaged in intrastate or interstate commerce. The mere fact that by far the larger proportion of maritime employes are engaged in interstate commerce raises a new and complicated set of problems. Practically all State workmen's compensation acts are so worded as to include employes engaged in interstate commerce for whom the Federal Government has not already provided. This would obviously include maritime employes, if the acts can be held to apply to them at all. The objection, however, has been raised that such State acts cannot apply to interstate commerce at all, because they burden and interfere with and interrupt the due course of interstate commerce. This point has been clearly set forth by Messrs. Foley and Martin, attorneys, of New York City, in an opinion written recently by them for the New York Boatmen's Association, as to the applicability of the New York compensation act to seamen. Their reasoning is, in part, as follows:

"While the State has the right to regulate the relationship between master and servant under a contract of employment within the State in relation to employes engaged in interstate commerce, where no act of Congress has been passed regulating such relations, this does not warrant the State legislature in passing a law which burdens or interferes with or interrupts the due course of interstate commerce, and we think this act does, among others, for the following reasons: the act as a whole places a burden on interstate commerce, in compel those engaged in interstate commerce to insure and pay a premium for such insurance which is a tax and burden, as we look at it, on interstate commerce; and it provides that, if said tax or premium is not paid, then the employer is liable to a fine or penalty; it takes away the defenses which the employer operating this class of vessels [barges] is entitled to avail himself of in the admiralty courts under the contract of employment; it interferes with the uniformity and unanimity of action of interstate commerce, in the sense that it burdens an employer engaged in interstate commerce in the State of New York, whereas a person engaged in interstate commerce in many of the other States of the United States may not be subject to such burden * * *."

This specific question as regards the application of workmen's compensation acts appears never to have been decided by the courts, although a number of cases involving the interstate operation of such acts have been decided by courts of first instance (See Bradbury, "Extra-Territorial Effect of Workmen's Compensation," *supra*). In most of these cases the workmen's compensation law of one State has been held to apply in other States, in respect of employers and employes of the first State; and the *lex loci contractus* has been held to rule, even though the case came to trial in the courts of another State. Of course, under an elective compensation law, the parties are at liberty to choose the act of their home State and, so to speak, make it a part of their contract, when undoubtedly the act would apply regardless of its burden. Whether an elective act would be declared burdensome and void as regards employers engaged in interstate commerce when they refused to come under the provisions of it, or whether the same would be said of a compulsory law, is, however, another matter, raising serious grounds for doubt. Certain it is that in *Hennington vs. Georgia* (163 U. S., 299) it was held that a State might forbid the running of interstate freight trains on Sunday, this being held to be a proper exercise of the police power. And, again, in *Smith vs. Alabama* (124 U. S., 465), a State law requiring the examination and licensing of railroad engineers in the State was held to apply to engineers engaged in interstate commerce and to be valid. Both of the laws under which these cases arose might well have been considered as constituting an interference with and as imposing a burden on interstate commerce, yet their constitutionality was upheld. This, however, in itself is not convincing of anything except that a good margin of doubt must exist until the matter has made its way through the courts and been adjudicated by the Supreme Court of the United States.

RATE MAKING IN FIRE INSURANCE

MR. S. EPSTEIN, Commissioner of Insurance, Colorado, has written the following letter to the editor of "Insurance Report" of Denver:

"To the Editor: In accordance with your request I am writing for publication in 'Insurance Report,' a brief statement of my position on the question of fire insurance rates.

"The recent decision of the Supreme Court in the case of the German Alliance Insurance Co. vs. the Superintendent of Insurance of Kansas, raises some very interesting questions. The gist of this decision is that the State has a right to regulate insurance rates.

"Since there is no higher tribunal than the Supreme Court we needs must accept this decision as final and bow to the dictum that the State has the right to regulate the cost of insurance. However, it seems to me that it would be unwise for a State to avail itself of this right.

"Fire insurance men frequently assert that state officials do not, and cannot, understand the question of rate making; and, indeed, that no one can understand it who has not devoted all his life

to the business. My own limited experience rather confirms this statement. I have made an effort to understand the question of rate making in fire insurance and have not been successful. Were the legislature of Colorado to pass a law requiring the Commissioner to revise the rates in this State I do not see how I could do this, either wisely or well. To be perfectly frank, I suspect that the company executives do not understand the rate making question either. In fact, some of them have admitted as much to me in conversation. They are selling goods before they know what the goods will cost, i.e., they make a rate before the fire occurs, and it is well nigh impossible, on account of our insufficient statistical data, for anyone to do this correctly, be he State official or company executive. Since the rates are based in a measure on guess work, it is impossible to gainsay the assertion that the company executive who has devoted thirty years to the problem is more likely to make a good guess than the State official who has studied the matter only during his brief term of office.

"The average citizen looks at fire insurance from a rather narrow point of view. He thinks because he has been paying premiums for twenty years and has never had a fire, that his rate is too high. He does not stop to realize that if every house which is insured should burn, fire insurance companies would have to go out of business. The entire public sentiment on the question of rates in fire insurance is a most unfortunate one, and is based on unfounded prejudice against insurance companies and on a lack of understanding of the business of insurance.

"To my way of thinking, this public antagonism can only be removed by education. It is but a short time since it was announced that Commissioner Done of Utah had resigned in order to take up the publicity and educational work on behalf of the fire insurance companies on the Pacific Coast. Obviously this is the beginning of a great and valuable line of work, viz., the education of the public on the value and the merit of insurance. I believe this to be an important step in a long campaign which will prove of an utmost value to the business of insurance and to the people of the United States.

"An example from my own experience might help to illustrate the point of view of many citizens. For many years I lived in a beautiful town of 10,000 population. A number of citizens have frequently pointed out to me the fact that the loss ratio in the town has been an exceedingly low one, 5 per cent or 10 per cent. They claim that this good fortune entitles them to a materially lower rate for their fire insurance. I have argued with my good friends and have explained to them that other cities of the same State have a much larger loss ratio and the insurance companies cannot base their rates on the experience of a single town, but must base it on the experience of a much larger area. It seems, however, that the old adage is perfectly true: 'A man convinced against his will, is of the same opinion still,' and every time I visit my former home and meet my insuring friends the same arguments are repeated to me.

"The fact of the matter is that even the State is not a sufficiently large unit. The loss ratio in one State may be low and in another State high. Therefore a company operating in both States must base its affairs on the average of the two States instead of the experience of each separate State.

"It is therefore obvious that the unit for rates cannot be the town; that the problem is larger than a problem of towns. The unit is not even the State; the problem is larger than a problem of States. The unit is really the Nation, the entire United States.

"Of course some modifications, due to the fact that some communities are more hazardous and others less hazardous, come in, but to my mind this is really a subsidiary qualification and does not affect the main theme, which is that the unit for rates is not the town, nor the city, nor the State; the true unit is the Nation. Other modifications can easily be thought of. For instance, the existence of fire prevention apparatus, sprinklers, extinguishers, up-to-date electric wiring, etc., entitles the assured to special credits or allowances on his rates. However, proper provision is made for credits to cover all such cases; witness the Dean Schedule, now in force in our own State, and also in about two-thirds of all the United States. But one must not lose sight of the fact that these are minor modifications and in no way negative my main proposition.

"Further, I do not think that the time unit should be the year. A company may do very well one year and may do poorly the next year. A company may seem to be accumulating a large surplus and suddenly a Chicago conflagration comes; a Baltimore conflagration; a San Francisco catastrophe; and the seemingly enormous earnings are wiped out in less than a week.

"My position, therefore, may be summarized as follows:

"For the making of rates, the unit of area is the Nation and the unit of time should be twenty-five years.

"I trust that you will construe this in a reasonable and not in an extreme way. For example: I do not mean that after there has been a readjustment of rates, a community should wait twenty-five years for another readjustment. What I mean is, that after a certain reasonable lapse of time, say after five years, there might be another readjustment, based on the experience of the preceding twenty-five years.

"I realize, of course, that I am treading on dangerous ground to suggest that the prevalent public tendency to demand lower rates is based on a misconception due to the selection of units of area and time which are too small. I presume it is scarcely the part of wisdom for a public officer to open himself to the criticism that he is not siding with the public demand for lower rates. The truth of the matter is that I do not stand for higher rates; I stand for adequate rates. Should adequacy require higher rates, let us have higher rates. Should experience prove that a lower rate is adequate, then by all means let us have the lower rate; and that immediately. In taking this position, I believe I am acting for the best public good. I believe that the prime need in insurance is safety; cheapness is a secondary consideration. What a man wants to know when he takes a life insurance policy is, first, that his widow and orphans will be paid the face of the policy if he dies; the amount of premium is a secondary consideration. What a man should want to know when he takes a fire insurance policy is that he will receive his indemnity in the event of a fire; the amount of the premium should be a secondary consideration. What a man should want to know when he takes an accident or liability policy is that he will receive indemnity in the event of loss; the premium which he pays should be a secondary consideration. In view, therefore, of the fact that a fire insurance company is always in danger of being wiped out any day by an unexpected conflagration, the prime need for safety is adequate rates, and not low rates.

"A very simple illustration of all this is the case of the city of San Francisco. For forty years it had been a very profitable field for fire insurance and suddenly we woke up one morning to find that every company operating in that city had suffered a staggering loss, and that some of the companies were even completely wiped out of existence.

"S. EPSTEEN, Commissioner."

"Denver, Colo., June 20, 1914.

NOTES ON INSURANCE, AMERICAN AND FOREIGN

Meeting of International Congress on Social Insurance.—The Ninth International Congress on Social Insurance is to be held in Washington from September 27 to October 2 of next year. This organization held its first Congress in Paris in 1889, only six years after the first social insurance law, that relating to sickness insurance, had been enacted in Germany; and only five years after the first accident insurance policy was issued, also in Germany. The Congress of 1915 will be the first to be held in the United States. The following subjects will be considered:

Workmen's Accident Insurance and Compensation.
Sickness Insurance, including Maternity Insurance.
Old Age and Invalidity Insurance or Pensions.
Unemployment Insurance.
Widows' and Orphans' Insurance.
Existing Agencies Performing Social Insurance Functions.

The secretary-general is Miles M. Dawson, Russell Sage Foundation Building, 130 East Twenty-second Street, New York City.

* * *

Compensation for Frost Bite.—The Industrial Accident Commission of Massachusetts has awarded compensation to a coal shoveler whose hands were so badly frost bitten while at work last Winter that the middle finger of each hand had to be amputated.

* * *

First Year of Workmen's Compensation in Illinois.—The "Insurance Post" of Chicago, publishes the following summary of the first annual report of the Industrial Board of Illinois:

"The first annual report of the Industrial Board of the State of Illinois, appointed under the Workmen's Compensation Law, which went into effect last year, has been filed with the Governor. It covers the period ending June 30, 1914, but the board was not organized until October 1, 1913, and did not really get down to business until December.

"All claims for compensation arising under the Workmen's Compensation Law, on which the employer and the employe have not been able to reach an agreement, are referred to the Industrial Board for settlement. Each of the contending parties is to appoint a representative on a committee of arbitration, a member of the Industrial Board or an agent appointed by it to act as chairman. This arbitration board is to take evidence, make investigations, reach a decision as to compensation and report its findings to the Industrial Board. These are subject to review by the entire board on complaint and the Supreme Court has power to review questions of law in all of its decisions.

"Since the board began operations, 584 cases have been presented to it and decided by the board or by its committee of arbitration. These involve the payment of $155,101.11 in installments. Lump sum orders have been entered in 367 cases, involving the payment of $335,732.91. There were pending before the board on June 30, 240 arbitration matters and 28 lump sum petitions. The board has heard and decided 29 cases on review and has 23 pending. Of the accidents reported to the board, 271 were fatal and 26,572 were non-fatal. Under the fatal accidents the compensation allowed which has been paid or is to be paid is $190,608.82, with medical and hospital fees paid of $3,579.04. Under the non-fatal cases, the compensation paid or to be paid is $489,625.94, with medical and hospital fees of $151,363.40. Of the non-fatal cases, five resulted in total permanent disability, 766 in partial permanent disability, and 25,801 in temporary total disability. The records of the accidents reported and other matters that have come before the board show that up to June 30, 9,411 employers who affirmatively accepted the provisions of the Workmen's Compensation Act, are paying compensation to injured employes; in addition 802 employers accepted in writing and 792 rejected the provisions of the Act, the principal reason given by them being the cost of the insurance."

* * *

Barcelona Wants World's Insurance Congress.—The Insurance Club of Barcelona, Spain, has addressed William J. Dutton, chairman of the executive committee of the World's Insurance Congress, authorizing him to invite the Congress to hold its 1917 sessions in that city. The letter to Chairman Dutton says:

"On behalf of and as president of the Insurance Club of Barcelona, a corporation comprising the membership of the managers and representatives of offices working in Spain, both native and foreign, and wherein the distinct branches of insurance receive the attention, defense and development worthy of the great social importance of our institution, I have the honor to bring to your special notice that we are desirous that the following sessions of the World's Insurance Congress should be held in this city, and if possible, that a date should be fixed to coincide with the International Electrical Exhibition which is to be opened in Barcelona in 1917; we are ready to put all our energies towards the furtherance of this object, and we offer you all the support which may be necessary on this side to make the Congress in Barcelona a success."

* * *

Accident Exposure Regardless of Occupation.—A recent issue of the "Agents' Record" of the Travelers Insurance Company contains the following interesting study of "Death and Disability from Accidents to Which Men are Exposed Regardless of Occupation":

"Accidents increase faster than the population. This fact, noted fifty years ago by a famous French statistician, has been emphasized of late years. The congested streets of our cities with their increasing density of pedestrians and vehicles, the fast motor car and electric trolley which have replaced the horse drawn vehicles, faster trains and steamships carrying many times the former number of passengers, the more feverish rush of the population, greater use of machinery, and even more active and general recreation have been the contributing causes.

"The gradual and continuous increase in the percentage of deaths from violent causes to the total number of deaths from all causes is graphically illustrated by the following life experience of the Travelers Insurance Company:

	Years of Exposure.	Pct. of Accidental to Deaths from all Causes.
5 years	1897-1901	7.7
6 years	1897-1902	8.2
7 years	1897-1903	8.7
8 years	1897-1904	9.0
9 years	1897-1905	9.3
10 years	1897-1906	9.3
11 years	1897-1907	9.3
12 years	1897-1908	9.2
13 years	1897-1909	9.4
14 years	1897-1910	9.2
15 years	1897-1911	9.1
16 years	1897-1912	9.3

"The year 1912 contributed the greatest percentage in all the fifty years of the Travelers' experience, with a total of sixty-seven accidental deaths to 544 deaths from all causes, or 12.32 per cent.

"The less accurate statistics of the census report for the total population based on the registration show that in 1909, 83,000 people were accidentally killed in the United States, and Frederick L. Hoffman, chief statistician of the Prudential Insurance Company, in investigating the mortality from accidents, males, during the United States registration era in the years 1900 to 1906, found that accidental deaths ranged from 13.5 per cent of total deaths from ages 25 to 34; 11.4 per cent from ages 34 to 44, and 8.4 per cent from ages 45 to 54, which is even greater than the figures

of the Travelers which are based on selected lives only. Between ages 20 to 40 accidents contributed a greater mortality than any two diseases combined with the exception of tuberculosis.

"On the basis of the present population between 850,000 and 900,000 people in the United States are under sentence of death from accident at any unknown moment during the next ten years.

"The accident experience of the Travelers for twenty years, 1890 to 1910, shows there were 140 cases of disabling injuries to every accidental death, but the amount of benefits paid for accidental death, dismemberment, and loss of sight, constituted 46 per cent of the total benefits paid, (exclusive of surgical benefits). The experience of all accident companies shows that one policyholder in eight or nine annually receives indemnity for accident. Industrial accidents of the most serious nature are being held in check by scientific methods of prevention, but the accidents to which all people are exposed where means of prevention are impossible because the hazard is individual, are continually increasing. Column 1 of the following interesting chart shows the causes of accidents to which all men are exposed without regard to their employment for which the Travelers paid benefits under its accident policies in 1913, and column two the percentage of benefits paid for each cause to the total amount of benefits shown, which is a fair measure of the severity of the accidents under each cause.

	Per Cent of Number of Claims.	Per Cent of Amounts Paid.
At home (indoor and outdoor)	23.0	16.9
Pedestrians	18.0	13.8
Sports and recreation, boating-hunting-sports-swimming	17.0	15.3
Automobiles	15.5	21.8
Travel (railroad-trolley-steamship)	11.4	19.5
Miscellaneous	7.2	7.7
Horse and vehicle	5.6	3.5
Bicycles and motorcycles	2.3	1.5

"While all these causes are contributing an increasing number of accidents, some have increased faster than others. Five years ago automobile accidents contributed a smaller percentage both in number and amount than miscellaneous accidents; to-day they contribute 15.5 per cent of the total number of accidents, while their serious nature is demonstrated by the contribution of 21.8 per cent to the total benefits paid.

"Travel accidents continue to lead in the seriousness of their results, their 11.4 per cent of the total number contributing 19.5 per cent of the total benefits.

"Accidents at home and to pedestrians maintain practically the same relative position; steamship accidents, which are attended as a rule with great loss of life, may be almost absent as a contributing cause during one year and figure prominently the next. The two greatest marine disasters, the Titanic and the Empress of Ireland, with a total of 2,700 dead, have occurred within the last two years.

"Accidents at home, where people are generally supposed to be safest, contributed nearly one-quarter of the total number of injuries and approximately 17 per cent of the total amount paid in benefits. The hazard of city streets is brought forcibly to mind by the record of 15,000 people killed and injured by accidents in Chicago streets in the 1913 Annual Report of the city attorney.

"When you consider that the number of people accidentally killed in the United States last year was greater than the number killed on both sides in the fifteen principal battles of the Civil War, while the number of people injured each year is greater threefold than the total number of troops enlisted in the combined Union and Confederate armies for the four years of the Civil War, you get a comparative idea of accident fatalities.

"Immunity from accidents is in itself an accident, and the man who has never suffered a disabling accident is under the law of average due for one shortly, and the man in the prime of life is the most exposed."

INSURANCE NEWS IN THE WEST

Cautious in Selecting Western Manager.—The Phoenix of London is taking its time about selecting an assistant Western manager. Assistant United States Manager Hart Darlington has been in Chicago several weeks, and now United States Manager P. Beresford is also in the city. They have interviewed a number of men, some who wanted the position and some whom they wanted for it. It is generally understood that the assistant Western manager must come from the field. Manager R. E. Lidster came up through the office and is regarded as one of the best office men in Chicago managerial circles.

* * *

Radicals Active in Kansas.—From Kansas come reports that parties connected with certain of the State offices are working on bills, with the intention of endeavoring to get the Legislature at the coming session not only to launch the State in the workmen's compensation insurance business, but also in fire and life insurance. How strong a sentiment for such radical legislation exists is not known. It may be only an expression of the views of a small contingent, but the position Kansas has taken on fire insurance rates has shown a willingness in the State to deal with insurance on radical lines.

* * *

Hartford Accident and Indemnity Gets Strong Man.—In appointing John T. Wagner manager of its branch office at Chicago, the Hartford Accident and Indemnity has secured one of the best of the younger casualty men in the city. His past record is a fair guarantee that he will build up a business for the company rapidly and at the same time substantially. After considerable experience in liability insurance with the Travelers at the home office and in Northwestern Ohio, Mr. Wagner came to Chicago in the Fall of 1908 as assistant manager of the liability department in the branch office of that company. There he made an excellent record, not only assisting in building up that company's business, but improving the general situation in Chicago. He was elected secretary of the Casualty Underwriters' Association of Chicago when it was organized and has held that position ever since. The Fidelity and Deposit having entered the casualty field, it decided to open a branch office for that department of its business in Chicago, and on January 1, 1912, Mr. Wagner assumed the duties of manager. For that company he has built up a good organization and a large volume of business and he had done this in a high-class manner. He resigned from that company's service, not because of any dissatisfaction, but simply because the offer from the Hartford company presented opportunities which he did not feel justified in letting pass. In his new position he will have the selection of his subordinates, and he will at once undertake the forming of a strong organization.

* * *

Casualty Situation Unsettled in Chicago.—It is stated that some of the important casualty offices in Chicago are showing a considerable decrease in premium income this year as compared with last. One general agent who is a close observer of conditions ascribes this to a number of causes. As regards his own office, he says a number of his contract customers have not the work on hand this year that they had last, and he has lost considerable in premiums where employers would not pay the rate that he demanded. With several active companies that make their own rates

and a number of inter-insurance exchanges that are free lances, there are several ways open to those seeking lower rates.

* * *

Mr. Potts on Inter-Insurers.—Superintendent Potts, of Illinois, has made an interesting statement concerning the attitude of the Insurance Department on licensing inter-insurance concerns. Three or four years ago an act was passed to provide for the licensing of fire inter-insurers and Lloyds, and in 1912 an act was passed also permitting the licenses of such exchanges to do liability and workmen's compensation business. Recently, however, the department gave its approval to the plans of an exchange organized to insure dram-shop keepers, their bondsmen and owners and lessees of property used for dram-shop purposes against liability under the Illinois dram-shop act. As this concern did not come within the classes named in the laws already mentiond, Mr. Potts was asked under what law he acted in taking supervision over it. He answered in effect that the Supreme Court of Illinois has held that the right to do inter-insurance business in the State is based on the constitutional right of private contract. Where an exchange is organized to engage in a legitimate business and its plans meet the approval of the Insurance Department, if the exchange so desires, the department will take it under its supervision on the ground that it is better to have it supervised than free to run wild if it should so elect.

* * *

Excise Bond Situation in Nebraska.—Nebraska excise bond business appears to be growing worse rather than better. Several of the companies that had written considerable of it previously, quit the line three or four years ago, but that is not preventing their having to pay large claims that are arising under their old bonds. An Omaha surety man stated recently that one company has about $30,000 in judgments against it in Nebraska under these bonds, with a large number of suits yet untried. Since the lawyers who handle them for the plaintiffs have been starting the suits in counties far distant from where the cause of action arose and where "dry" sentiment exists, the chance of defending them successfully is reduced. Recently seven companies interested in one bond for $5,000 paid judgments amounting to $11,500, given in favor of three different parties, one of whom was a posthumous child of the man who had been killed after visiting the bonded saloon. This instance shows the possibility for loss these bonds have.

* * *

Plans Perfected for New Accident and Health Association.—Plans for the organization of the new association of accident and health companies and associations are now pretty well worked out. Last week a conference of officers of the Detroit Conference, the American Association of Accident Underwriters and the National Mutual Union was held in Chicago and certain recommendations to the companies were agreed upon. Among them are the following: That the name of the new organization shall be the "National Accident Underwriters"; that its purposes shall be to promote good will among companies, protect the companies' property rights in the business and to promote co-operation and general advancement of the accident and health business; that active membership shall consist of companies licensed in their home States; that associate membership shall consist of officers and home office department heads of companies, these to have all privileges of active members except that of voting; that dues be $10 a year for active members and $5 a year for associate members.

As the number of companies that have expressed any opposition to the new organization is almost negligible, there remains virtually no doubt that on September 8 and 9 the old organizations will hold their final meetings at Atlantic City and on September 10 the new association will be launched with a large membership.

LA SALLE

Chicago, August 7, 1914.

ITEMS OF INSURANCE NEWS.

The Fidelity Mutual Life has published a book in memory of President L. G. Fouse, who died in Philadelphia on January 16 last. Mr. Fouse was the founder of the Fidelity Mutual Life and was for more than thirty-five years its president. In point of service he was the dean of the life insurance presidents of America. The book is not a biography, but is a gathering together of many beautiful tributes of esteem called forth from all over the United States upon the passing of one of the great men of life insurance, a man of broad intellect and high courage, who played a conspicuous part in writing the history of his time.

The State Supreme Court of Missouri rendered a decision recently that a divorced wife has no claim on her former husband's insurance, even though named as beneficiary in the policy. The deceased had taken out $30,000 of life insurance and made it payable to his wife. The couple were divorced. The husband sought to have the policy made payable to his estate, but his former wife entered suit and alleged a property right in the policies. The assured died before the case was decided. The court now holds that whatever rights the wife had should have been adjusted in the matter of alimony at the time when the divorce was obtained.

In answer to an inquiry as to how the present situation would effect the insurance companies, Superintendent Hasbrouck, of the New York Insurance Department, said that although the market value of the securities owned by the insurance companies would, at the present time, show a depreciation, the actual values have not been changed by reason of the war in Europe and the closing of the stock exchanges. The policyholders, he states, are amply protected and have no occasion for alarm.

Joy Lichtenstein has been appointed manager for the Pacific Coast department of the Hartford Accident and Indemnity Company, associated with Dixwell Hewitt, Pacific Coast general agent of the Hartford Fire Insurance Company. Mr. Lichtenstein has been manage for the Globe Indemnity's surety department for the Coast since its organization.

The Northern Assurance Company of London, has purchased the entire shareholding of the Royal Scottish Insurance Company, Limited, Glasgow, which does a fire, burglary, workmen's compensation, personal accidents, property owners, third party, plate glass, profits, and general contingency insurance business.

Attorney General Dawson, of Kansas, has filed a petition for a rehearing by the Supreme Court of the suit begun by the fire insurance companies setting aside the Barnes reduction of rates, recently decided in their favor. As the Supreme Court does not reconvene until Fall no action can be taken until then.

Having expended $144,217 in equipping its passenger cars to meet the requirements of the Federal Safety Appliance acts, the Pennsylvania Railroad has notified other railroads that it will no longer accept from lines with which it connects any passenger cars which do not meet the requirements of the acts.

Comptroller Prendergast, of New York City, has recommended that the city carry its own risks on the surety bonds of city and county officials, calling attention to the fact that the city's annual insurance premum is now $50,000 and that losses through misappropriation or other derelictions have been infinitesimal.

A new law has been enacted in Louisiana making it a misdemeanor to make or transmit false and derogatory statements, rumors, or suggestions, written, printed or spoken, concerning the financial condition of any life insurance company organized under the laws of Louisiana.

The Columbia National Life of Boston will hold its agency convention at Santa Cruz, Cal., meeting on Monday, the 23d of August, 1915. On the 26th the delegates will be taken to San Francisco for the balance of the week at the Exposition.

Fire losses are reported to be above normal in Oregon and the annual report of the Insurance Department says that many of the stock and mutual companies have expended more than they took in in premiums in the State.

Robert S. Hart, secretary of the Fidelity and Deposit Company of Baltimore, Md., has been appointed manager of the company's fidelity department as successor to Vice-President George H. Gist, who died recently.

The Southwestern Surety Insurance Company of Denison, Tex., has reinsured all the outstanding accident and health and plate glass business of the General Bonding and Casualty Insurance Company of Dallas.

The Kentucky industrial and commercial business of the Midland Casualty of Chicago has been reinsured in the National Life of the U. S. A. of Chicago. The Midland has withdrawn from that State.

The Iowa department has approved the change of name of the Automobile Mutual Protective Association of Cedar Rapids to the Iowa Mutual Liability Company.

REVIEW OF THE FINANCIAL SITUATION

IT is significant of the composure which the country has recovered in the last few days despite the tremendous difficulties with which trade, industry and finance are beset that even now time is being found, while pressing problems are under consideration, to regard somewhat the prospects of the further future. One of the striking features of the chaotic situation caused by Europe's earthquake of war is that so much recognition is being taken of the important changes in the conditions of banking and business which are bound to be the permanent result of the new processes which will have to be devised for coping with an unprecedented economice emergency.

After so much has been said, however, as to the future attention has to be turned to the immediate aspect of affairs. Up to last Saturday night there were still important members of the business and banking community who refused to believe, against the evidence of their own eyes, that any general war was impending in Europe. This refusal was based on positive assurances from high finance abroad that Armageddon was still an apocalyptic vision and not an imminent fact. How ruthlessly a civilized world has been disillusioned is recorded in the history made in the last few fateful days. All the overwhelming validity of the economic as well as the humanitarian arguments against war counted as nothing in the scales of destiny, and before the present week drew to its close there were not enough nations excluded from the area of European conflict to be worth enumerating.

Irrespective of all the subleties of diplomatic pretense, the concensus which has been arrived at in this country is that upon Germany must be fastened responsibility for inflicting the fearful trouble with which the whole world has to deal to-day, although the attribution of responsibility is accompanied by a singularly clear conception of the probability that a stage had been reached in the affairs of nations when nothing but war could settle questions of tremendous moment. Indeed, it is part of the consideration of the further future already referred to that general war in Europe had become the only and necessary cure for a dreadful disease which was holding civilization in economic check, the disease of militarism dominated by dynastic purposes.

The proof that Germany forced this trial on humanity seems, however, difficult to combat. From the day when German seizure of Alsace-Lorraine set up an eternal cause of quarrel that facilitated Bismarck's programme of organizing Germany into one huge army, there has been an obvious adherence to one objective, the German dictatorship of Europe. In the last decade there have been at least three occasions when Germany with increasing determination tried out the temper of its people and the disposition of Europe, probably deriving from each test encouragement for the desperate venture undertaken this Summer when Austria's ultimatum to Servia ushered in the train of catastrophic events that have followed.

A very fair case could be offered for the theory that Germany made a colossal bluff to all Europe on certain mistaken calculations, but the bluff was carried so far that the Kaiser had to make it good. It is a reasonable guess that he counted on Russia's unreadiness for war to demonstrate to the Slav States and the Balkans that they could not rely on the Czar's protection. That France was supposed to be in a state of internal disaffection which would cause it to weaken in the face of German aggression is also inferential. There was hardly a thought of Great Britain's willingness to get into a war or that the Low Countries would oppose Germany and that Italy was expected to side with Austria and Germany cannot be doubted. With what magnificence of self-confidence Germany has met the issues raised by itself is shown in the fast following declarations of war which have been made at Berlin, and it is evident that the Kaiser held his Empire to be fit and ready to stake everything on the gauge of battle. The proof of financial preparedness but adds to the other proofs that Germany courted and brought on this fearful struggle, but only time can tell whether or not and where the Kaiser went wrong in his reckoning.

As the week approached its end Germany and Austria, represented in the Hohenzollern and Hapsburg dynasties, found themselves surrounded with armies of provoked enemies. For Russia's attitude the explanation of ancient hostility between the Slav and the Teuton will suffice, but for the rest one can only see in the alignment of allies against Germany the effect of slow working influences which have at last brought the spirit of democracy into open combat with dynastic ascendancy. Some day in all likelihood there will be a European union against the Slav nations, but the significant aspects of the present struggle are those which express popular aspirations for political freedom against dynastic traditions.

The struggle goes back to the suppression of the French revolution in the Napoleonic phenomena. After Napoleon came Metternich with his Holy Alliance and his policy of reaction designed to prevent revival and spread of revolutionary ideas which menaced all kingly power. After Metternich came Bismarck with his policy of alliances which also contemplated the preservation of dynastic autocracy. The policies of reaction are now bearing their legitimate fruit in a war which finds the German people, although wonderfully equipped for democracy, fighting to maintain the dynasties in middle Europe. The conversion of the peaceful German people into a war mad nation is a tribute to the mind of Bismarck and one of the absorbing questions of the moment is whether or not the Germans will, in the course of the next few weeks, have a blinding revelation of what it has meant for them to organize their country for war, involving as it has a generation of the submission and subjection of public opinion to autocratic wills.

Through military organization there has been effected a wonderfully centralized control over the whole German life with the result of facilitating a directed and scientific economic development which is the wonder of modern times, but the burden of militarism has become too high a price for Germany and the rest of Europe to pay. Just as a century ago all Europe arrayed itself against France personified in Napoleon, so Europe has had to array itself against Germany personified in the Kaiser or accept a dominant militarism absolutely irreconcilable with the progress of mankind. Without hatred for the German people there has been manifested an instinctive American hope for Germany's defeat in the war which the Kaiser has brought on in deliberate adherence to an ideal of world empire or downfall. If the allies against Germany prevail we can expect to see democracy go forward and dynasty decline with the way prepared by the war for the eventual consolidation of the Western European nations against the final warfare for the destruction of absolutism, which will be waged when the whole world goes against the Slav.

For the time being news of the war will make us all more or

less oblivious of the troubles which the war has brought upon us, but they are real and others are to follow. International commerce all over the world has been suspended and international finance has been paralyzed. Domestic trade is backing up and slowing down rapidly in consequence.

Thanks to the swift adoption of emergency measures the banking position of the country has been fortified against both shock and strain. Last Sunday there was a feeling of great anxiety in banking circles as to what the new week might bring forth, but it was seen by Monday night that the steps taken to meet even panic exigencies had been plainly successful in preventing excitement. The closing of the Stock Exchange and the embargo placed on gold exports, together with the country-wide resort to clearing house certificates and the issuance of emergency currency, had allayed public unrest and had lightened immensely the sudden fearful pressure thrown on the financial organization. The next thing to do was obviously to devise some method of renewing the foreign trade movement and reopening the international money market, but headway has been made very slowly in the solution of this problem.

The chances are that no solution will be contrived in advance of an establishment of naval control over the ocean by one side or the other in the European conflict. Unless all the analysis of naval authorities is hopelessly awry it should not be many days before the British Government can announce that the seas are clear for shipping in all but German and Austrian bottoms, and for all goods except those contraband of war consigned to Austria and Germany. When such an announcement is made a huge volume of exports will be released here and with their release the blockade on the international exchanges will be lifted and domestic trade will proceed to move in volume. The situation will even then be far from spelling prosperity, but it will be infinitely better than the prostration which must be endured in the interval. What will come after can be left until then to discuss. Great Britain, whose economic life is wholly dependent on international trade and finance, has every reason for taking the most energetic action to clear the ocean for commerce, and it is possible that we have been concerning ourselves a little over-anxiously here as to how the supplies which we can send to foreign markets are to be delivered.

COTTON

August 8, 1914.

THERE have been no cotton markets during the past week. Every cotton exchange in the world upon which contracts for the future delivery of cotton are made has been closed by reason of the general war in Europe, and the members of these exchanges who are ordinarily doing business for customers in almost every city in the world have to a large extent been unable to get into communication with these customers at all. On the Continent of Europe many members of the cotton trade have been obliged to bring their business to an instant standstill, in order that they might join the colors. They were unable to give any directions to their correspondents in Liverpool and New York with regard to the disposition of their outstanding contracts, and commission houses in these markets are left in complete uncertainty as to what they should do to protect their customers' and their own interests. There is not the faintest expectation of the reopening of these exchanges for many days, possibly for weeks or even months. All the energies of the members of the greater exchanges have been devoted to reducing to the lowest possible terms the contracts outstanding between themselves, and, in so far as this is possible, the contracts carried by them for the account of customers. To accomplish these ends all the processes of "rings," "settlements" and "set-offs" have been resorted to. In Liverpool there has been a kind of forced transfer of all contracts, whether bought or sold, to the single position of January-February, and members have been required to bring their contracts with each other to the single price of 6.12d. for January-February. On the New York Cotton Exchange, the prices of the several positions, on contracts between members, have been brought to the prices quoted at 11.16 a. m. on Friday of last week, the moment when the exchange was officially closed for business. The result of these processes has been that the number of contracts outstanding between members of these exchanges has been reduced to the lowest practicable point, and prices to so low a level, compared with any recent prices for contracts for future delivery, that it is believed that, on the opening of the exchanges, even should a lower level of prices still obtain, all members could easily meet the situation. It is an almost marvelous thing that with such violent changes in the prices of cotton as occurred just before the closing of the New York Cotton Exchange on Friday, only three failures of member houses should have occurred, two of them of comparatively small size, and the third the large house whose inability to meet its engagements precipitated the final collapse of the market. The inherent security afforded to the trade in the "hedge" insurance obtained by buying or selling future contracts on the Exchange was eloquently illustrated by this fact. So conservatively is the business conducted that even the outbreak of greatest war in history and price fluctuations of the most violent character in the cotton futures markets were accompanied by failures extremely few in number and involving amounts of money infinitesimal in comparison with the enormous aggregate of business done. It should be noted that the same fact is true of the New Orleans Cotton Exchange and of the Liverpool Cotton Association. Outside of the absorbing activities of the members of the great cotton exchanges just described, the great question has arisen as to how the coming American cotton crop, which has already begun to be offered on the American markets and soon will be coming forward by the hundreds of thousands and then millions of bales, is to be financed and distributed in the face of such utter commercial and financial confusion as the European war has brought about. The problem is one of national importance in the United States, for the value of the cotton annually sold abroad is the backbone of our entire system of international financing. Certain it is, that the American cotton exchanges have not resources enough to carry the burden alone. Their capital and hence their ability to afford hedge insurance have accommodated themselves to the normal amount of business the American exchanges are called upon to care for. They cannot suddenly step into the place of the world at large and provide the facilities not only for the one-third of the American crop consumed at home, but also the two-thirds consumed abroad. Some provision of price insurance must be devised for the cotton trade unless the market value of cotton in the most active marketing months is to fall to ruinously low figures, reducing the cotton farmers to penury and disarranging the finances of the entire country. Able minds, both in the cotton trade and among bankers, are now busy with this problem, and it is to be expected that a plan will be worked out which will enable the early surplus of cotton to be carried along until it is later needed, without tremendous variations in the price between the earlier and the later part of the season. In the editorial pages of this paper, this matter is discussed more at length.

THE CONTRACT MARKETS

COTTON CROP EXPECTANCY BY STATES AS INDICATED BY DEPARTMENT OF AGRICULTURE'S CONDITION REPORT FOR JULY 25.

In last week's issue of this paper (page 151), the expectancy of this season's American cotton crop was figured to be 13,823,349 bales, on the basis of the average condition of 76.4 per cent of normal announced by the Department of Agriculture as obtaining on July 25, the Department's formula for "normal," or 100 per cent, for August 1 of this year, and the Department's estimated cotton acreage of 36,960,000 acres. In this calculation the general averages for the entire Cotton Belt were used. But, as the Department of Agriculture has more than once indicated, the general average of condition is in reality a composite of the averages of condition for the several States, and the "normal," or 100 per cent, is also an average of the "normal" for each of the States. The process of averaging allows the introduction into the totals of a certain variant of error, or, in other words, not quite the same results are reached if the crop expectancy is calculated by States, as if averages for the States combined are employed. In "Pearsall's Market Bulletins" for August 1, the crop expectancy indicated by the recent report of the Department of Agriculture is published, as calculated by States, each State being given its own "normal," or 100 per cent, production of cotton per acre for August 1, on the Department of Agriculture's formula. The result is a crop expectancy of 13,912,000 bales, instead of the 13,823,349 bales arrived at by the use of the general averages alone. The following tables gives, by States and in total, the condition on July 25, the acreage, the "normal" yield by acre in pounds, and the indicated crop in bales of 500 pounds gross weight, or 478 pounds net weight:

State.	Condition July 25.	Acreage.	Equivalent to 100% lbs. Per Acre.	Indicated Crop in Bales of 478 lbs. Net.
Virginia	89	46,000	275	24,000
North Carolina	86	1,589,000	305	872,000
South Carolina	79	2,826,000	285	1,331,000

Totals	76.4	36,960,000	234	13,912,000

* * *

Adana Province.— Mr. Edward I. Nathan, United States Consul at Mersina, Turkey, writes that all indications point to a

large cotton crop in the Province of Adana, Turkey, this year. Last year's crop of 115,000 bales will doubtless be exceeded if present prospects are realized. Sowings this year are in excess of last year and the plentiful rains have caused most of the seed to sprout. The cotton is, however, mostly short fibre and will not in any way affect the demand for American cotton.

* * *

Costa Rica.—Mr. Samuel T. Lee, United States Consul at San Jose, Costa Rica, writes that a petition is about to be made to the Congress of Costa Rica by Messrs. Harrell and Cooper Marshall, who will ask for a concession granting large tracts of unoccupied lands, to be planted in a new variety of cotton, which has been produced by the former during his residence on the Canal Zone. Samples of this cotton have recently been furnished the United States Department of Agriculture by Mr. Harrell. Mr. Marshall represents British interests, which, apparently, are ready to undertake cotton planting on a large scale.

* * *

Philippine Islands.—Mr. J. F. Boomer, correspondent of the of the United States Department of Commerce, writes from Manila that in the Island of Marinduque and the Province of Batangas, Island of Luzon, a wild shrub cotton (a type of *Gossypium*) has been found that promises to supply a valuable fibre for cloth weaving. This shrub, or bush cotton, is different entirely from the kapok or so-called "tree-cotton," that grows in abundance in many parts of the islands. The newly found bush, or shrub, cotton has a long fibre pronounced by the local cotton-mill managers longer and finer than that of the cotton imported from the United States. This cotton has been purchased and used in small quantities by the local mill at 4½ cents a pound more than is paid for the imported cotton. The shrub in places grows 15 feet high. It is a perennial and bears flowers and bolls at nearly all seasons of the year. No attention has been paid to the plant heretofore. It is probable that official experiments in planting and cultivating the shrub will be started. So far the plant is reported as growing wild in more or less abundance in the Provinces of Cebu, Batangas, Tayabas, and in the island of Marinduque.

NEW YORK QUOTATIONS FOR STANDARD COTTON GOODS AND YARNS

The following are quoted prices in the New York market for typical standard cotton goods (in cents per yard) and cotton yarns (in cents per pound) on Saturday of last week and on Wednesday of the present week:

Cloths.	Saturday.	Wednesday.
Print cloths, 28 in. 64 x 64s	3¾ nom.	3¾ nom.
Gray goods, 38 in., standard	5	5
Brown sheetings, Southern standard	7¾-8	7¾-8
Denims, 9-ounce	14-17	14-17
Tickings, 8-ounce	13	13
Standard prints	5¼	5¼
Standard staple ginghams	6¼	6¼
Yarns.		
Southern 2-ply skeins, 30s	24½-25	24½-25

Coal Production in the United States.—The production of coal in the United States has again broken all previous records, the output for 1913 being 570,048,125 short tons, which is considerably more than double the production in 1900 and more than eight times the production of 1880, according to a statement just issued by the United States Geological Survey, from figures compiled by Edward W. Parker, coal statistician. The value of the coal mined in 1913 is given as $760,488,785.

Compared with the previous year the output for 1913 shows an increase of 35,581,545 tons, or nearly 7 per cent. The increased activity indicated by these figures was well distributed throughout the twenty-nine coal producing States, twenty-three of which showed increases and only six decreased production, the decrease in one of these—Colorado—being due solely to labor trouble. Of those showing increase, twelve made record yields, and Pennsylvania, the leading coal State, broke records in both bituminous and anthracite production.

The development of our coal-mining industry with reference to population presents some interesting comparisons. In 1850, the coal output was 7,018,181 tons, or 0.3 ton for each of the 23,191,876 inhabitants; in 1880 the population had increased to about 50,000,000 and the production of coal to about 71,000,000 tons, an average of 1.42 tons per capita. At the close of the nineteenth century, the population was 76,303,387, an increase of a little over 50 per cent as compared with 1880, while the production of coal had increased nearly 400 per cent in the same period and averaged 3.53 tons for each person. In 1913, the per capita production was figured at 5.85 tons. In addition to this increase in the consumption of coal, the use in recent years of petroleum and natural gas should also be considered.

The coal mines of the country gave employment, in 1913, to an army of nearly three-quarters of a million men—747,644. The average number of days worked by the bituminous miners in 1913 was 232, against 223 in 1912, while the average time made in the anthracite mines in 1913 was the best on record—257 days for each man. The average production per miner in the bituminous mines increased from 820 tons in 1912 to 838 tons in 1913, both being record-breaking averages, while anthracite miners increased their average from 485 tons to 532 tons in 1913.

Things and actions are what they are, and the consequences of them will be what they will be; why then should we desire to be deceived?—Bishop Butler's Sermons at the Rolls.

"WHOM the gods would destroy, they first make mad." On Thursday of this week the Senate of the United States completed the legislative action required to make the so-called Lever Bill, regulating cotton exchanges, a law. It remains now only for President Wilson to sign the bill, and it is the general expectation that he will do this. The bill has already been sufficiently described in these pages, and there is no need to go over the ground anew. Six months will elapse before the new act actually goes into effect, but there can be no doubt that the cotton markets will immediately begin to show its effects, inasmuch as the very nature of the cotton markets is to make commitments predominantly for the future. On the two great American cotton exchanges, New York and New Orleans, it is reasonably safe to say that in normal times the average due date of all commitments is not far from six months ahead. Of course, at the present moment both these exchanges, as well as all the European exchanges, are closed on account of the dislocation of all international business by the war in Europe; and no one can foresee the probable time of their re-opening. Adjustments that have been going on in the Liverpool exchange since the war broke out would indicate that English cotton merchants hardly expect to be able to re-open their exchange until towards the very end of the present year. They have arranged to transfer all their outstanding commitments for the future delivery of cotton to the coupled position of January-February, 1915. It may, of course, be that events will permit an earlier resumption of active trading, but it was evidently looked upon as the part of conservatism not to expect a sufficient clearing-up of the situation to make it safe to resume business until towards the very end of the present year. It may very well be that even this period will prove too short, and that a full six months may elapse before the cotton trade feels itself to be in a position to renew the purchase and sale of cotton according to the system which has been developed during the past forty-odd years. Should this prove to a correct prognostication the Lever Act would become operative almost coincidently with the resumption of business on the domestic and foreign cotton exchanges. The Lever Act itself will undoubtedly be a most powerful influence against the early re-opening of the American exchanges. The cotton trade has been thrown into the utmost confusion by the war; its members are for the most part completely at sea with regard to their existing commitments, and are taking the severest losses in an attempt to reduce these commitments to such a status that they can be controlled and protected in the immediate future. The changes in the entire system of marketing the American cotton crop embodied in the Lever Act are far too profound to warrant members of the cotton trade in experimenting with them while the world is economically and financially, as well as politically, distraught. There is no generally accepted view as to the results which will be produced by this legislation; the very members of Congress who framed it and have procured its adoption are completely ignorant of its probable consequences; it is a leap in the dark, a blind snatching at a political remedy for a disease never competently diagnosed; prejudice and jealousy and ignorance and economic absurdity drove it on to its passage. And outside of Congress there is the same inability, on the part even of the most experienced minds, to reduce to the concrete terms of commercial practice the strange and hitherto unheard-of provisions of the act. There is not in the whole wide world one single cotton merchant whose conception of the effects of the act upon the cotton trade is more than the merest guess. There is no merchant anywhere who would dare, even if the Act were to go into effect in a time of universal peace and of undisturbed commercial relations, to enter upon engagements governed by the terms of the Act except tentatively and to a most limited extent. He would know that common prudence demanded that he should merely feel his way. It goes without saying that in times like the present, when all international commercial intercourse is either interrupted or subject to interruption at a moment's notice, a cotton merchant would be little less than insane to venture into the unknown and perilous field, where alone, according to the mandate of Congress, he may exercise his activities and employ his experience and judgment. It would, accordingly, be little less than a crime for the American cotton exchanges

to open and to hold out to the unsuspecting opportunities for making future commitments in cotton, at a time when the entire world is in a state of confusion with regard to commitments made under the thoroughly understood system about to be replaced, and when new commitments would virtually have to be made according to the terms of a statute which nobody understands.

It is impossible to deny that this is one of the most distressing conjunctures of affairs that has ever been seen in the commerce of the United States. The cotton crop is, (or should be), from the point of view of the country's international relations, commercial and financial, the greatest single asset we possess. At this very moment the picking of this season's crop has begun; in three weeks it will be in full swing and in six weeks over 100,000 bales of cotton will every day be picked and ginned, ready for market. This is a far greater amount than is required for daily consumption throughout the world, even in times of profound peace; and for months to come the daily consumption will be reduced, because of the disturbance of international trade by war, to an amount far below the normal. The surplus to be cared for will thus be, in all human probability, far greater, both absolutely and relatively, than has ever been known in the whole history of cotton. During the past forty years and more it has been the custom for cotton merchants and manufacturers to assume the burden of the surplus cotton of the active marketing months by means of commitments for future months and years entered into with owners of cotton, on the one side, and with ultimate consumers, on the other, assuming at the start the form of contracts for future delivery made on the great cotton exchanges, at home and abroad. But this year, with the burden greater than ever was known, the means of adjusting and carrying it are infinitely less than have been available for over forty years, i. e. since the cotton exchanges were established. The entire cotton trade is enmeshed in all the uncertainties of the war; and at the same time it is unable to look beyond the war by reason of the plight in which the cotton exchanges find themselves, partly as a direct result of the war and still more because of the complete ignorance of every one concerned as to the ultimate effects upon exchange transactions of the provisions of the Lever Act.

At the present moment, bankers are anxiously considering, in conjunction with the Government, projects for financing the season's cotton crop in such wise as to preserve to the country as a whole, in the first instance, and to the cotton producers, in the second instance, as large a part as possible of the value of the cotton we shall have to sell. The cotton producers themselves are sending delegations to Washington, in the endeavor to obtain governmental aid in their distressful situation. The commercial interests of the entire country, and particularly of the cotton-producing States, are keenly alive to the economic loss involved in marketing the cotton crop at a ruinously low price. It may almost be said that our entire financial situation for a long time to come is dependent upon a successful solution of the problem. And yet this is the very time chosen by Congress to tie the entire cotton trade hand and foot for virtually the whole period of greatest danger, to annihilate at a stroke the basis of the credit of all modern cotton merchants,—a credit which has enabled them to buy all the cotton grown in the country, ready for sale by the producers, and to sell it to the consumers all over the world, whenever and wherever they might desire it; in other words, to remove the cotton trade entirely, as a saving force, at the very time of greatest need. Human folly could reach no farther!

This is no proper moment for a detailed analysis of the Lever Act. A little later, when the agonies of commerce and credit and finance have become somewhat less acute, this paper will atempt to apply the scalpel and to dissect the measure, with a view to showing what it really means and what consequences will really flow from it. It must suffice now, however, to bring out the essential preposterousness of one or two of its provisions, as that preposterousness is made apparent by the difficulties and dangers of the present situation. We would invite attention especially to the unspeakable absurdity of a whole great nation like the United States seeking any and every means of reaching foreign markets with the two-thirds of the cotton crop that must be sold abroad, and at the same time enacting legislation such as is contained in Section 11 of the Lever Act. Here is this precious legislative panacea for the troubles of the harassed producers of the most important, in an international sense, of all the commodities produced in the United States, and that the very commodity which every thinking man is at the present moment most anxious to find every possible market for, upon the most advantageous terms possible. Section 11 of the Act reads as follows:

"Sec. 11. That upon each order transmitted, or directed or authorized to be transmitted, by any person within the United States for the making of any contract of sale of cotton grown in the United States for future delivery in cases in which the contract of sale is or is to be made at, on, or in any exchange, board of trade, or similar institution or place of business in any foreign country, there is hereby levied an excise tax at the rate of 2 cents for each pound of the cotton so ordered to be bought or sold under such contract: *Provided*, That no tax shall be levied under this Act on any such order if the contract made in pursuance thereof comply either with the conditions specified in the first, second, third, fourth, fifth, and sixth subdivisions of section five, or with all the conditions specified in section ten of this Act, except that the quantity of the cotton involved in the contract may be expressed therein in terms of kilograms instead of pounds."

The legislative explanation of this extraordinary provision of the Lever Act is that it will never do to hold the "cotton gamblers" who now frequent the American cotton exchanges to rigid and sharply restricted conditions of trading at home and at the same time to have it open to these immoral persons to use the readily accessible cables and go on with their "gambling" in the Liverpool and other foreign markets. The actual effect of the provision, however, is that not a single person within the United States, except a mere buying agent of a foreign house, can buy a hundred bales of cotton and sell on a foreign exchange a contract for the future delivery of the same, without paying a tax of $10 per bale, or $100 for the one hundred bales included in the contract. Surely, this is a marvelous device for obtaining the widest possible market and the highest possible price for the American cotton crop! It may be said that the proviso contained in Section 11 will become operative and that the foreign exchanges will make their form of contract conform to the provisions of the Lever Act, so that the selling of future contracts on those exchanges will become tax free. But every person familiar with the conditions of the cotton trade

in foreign countries,—conditions which must be met by the forms of contract of the foreign exchanges,—knows that contracts embodying the provisions of the Lever Act are impossible there. Hence, so long as the Lever Act is in force, all American cotton merchants will be precluded from buying any cotton at all for sale, in the form of future contracts, on the Liverpool and other foreign cotton exchanges. Should the Liverpool Exchange re-open to-morrow, (assuming that President Wilson will sign the Lever Bill within a day or two), none of the cotton now beginning to be offered for sale in the South, nor any of the vast burden of cotton requiring to be marketed by the South in the next three or four months, could be safely bought by any person within the United States and "hedged" with future contracts on that exchange; for should such a buyer be unable to dispose of his cotton before the end of February, 1915—i. e. before the possible or even probable date of the termination of the European war,—and thus be compelled to transfer his hedge to a position later than February, he would be compelled to pay to the United States Government a tax of $10 per bale on every bale of the cotton whose "hedges" were thus transferred. This is indeed a mockery of good sense in the solution of a problem that is to-day deeply vexing the minds of American bankers and merchants, as well as of American cotton producers, and that is troubling the Government of the United States itself.

Arthur Richmond Marsh

WILL GOVERNMENT REGULATION SUCCEED

By Samuel O. Dunn*

WHETHER government regulation of railways and other public service corporations will succeed is a question of foremost importance to the American people. If regulation is a failure the public will be presented with two alternatives. It may let these concerns be managed without regulation and control; or it may acquire and operate them itself.

Many have no doubt as to which of these alternatives would be preferable. They would unhesitatingly choose public ownership. Many would even prefer public ownership rather than private ownership subject to public regulation. I have given some years of study to government ownership; and I have become with respect to the politico-economic opinion now apparently dominant, a heretic. I do not accept the view that if we had to choose between unregulated private management and government ownership we ought to choose public ownership. Under the political conditions that exist in this country, if I had to choose between unregulated private management and government management I would choose unregulated private management. Five years ago I would have said the opposite. That was before I had really studied the subject. Unregulated private management has serious faults. It has developed numerous abuses in this and other countries. But government management is also unregulated management, for the government cannot regulate itself. And unregulated government management has greater faults than unregulated private management. Under unregulated, or practically unregulated, private management of railways we had rebating, stock watering and numerous other abuses. But along with those abuses we had the most enterprising and progressive railway management that ever existed. The unregulated private management developed railways faster, built them cheaper, paid higher wages, charged lower rates, and did more to promote commercial and industrial development than has been done by any other railway management, regulated or unregulated, private or public. It was the first railway management in the world to adopt the air brake. It was the first to adopt the automatic block signal. It was the first to adopt steel freight and passenger cars. It was the first to develop those systematic methods for increasing the average load hauled per car and per train which have done more to reduce the cost of railway transportation, and thereby to keep down the rates that must be charged for it, than all the other methods that have been developed since the railway was invented. As President Hadley, of Yale has said, "With all the talent that has been put into public administration of industry, it is a salient fact that the important inventions have been made in countries enjoying private enterprise. * * * In most cases it took government experts from twenty to twenty-five years to discover them after they had been in use on private (railway) lines." It is this initiative and enterprise which constitute the great merit of private management; and it is the lack of them which constitutes the great defect of public management. And this one demerit of public management is more than an offset to all the shortcomings and offenses of unregulated private management.

Private management means progress, although incidental to that progress there may be abuses. Nowhere has public management meant progress in the true sense. Public management is like the Japanese nation. It is often skillful at imitating improved methods or machinery that others have introduced, but it never creates them. And this is a shortcoming of public management which is ineradicable.

I know that the advocates of public ownership make remarkable claims regarding the results it has secured in other countries, and that it would secure here. But you will search the world in vain for evidence in support of these claims. They tell us that government management would be more economical than private management; but the evidence shows that under comparable conditions private management is almost invariably more economical than public management. They tell us that public management would provide more adequate facilities than private management; but the evidence shows that under comparable conditions private management usually has provided more adequate facilities than public management. They tell us that our railways would be safer under public management; but when you study the evidence you find that in almost every country where there are both State and private railways the private railways are as safe as, or safer than, the State railways. They tell us that under government ownership railway rates in this country would be lower, in spite of the fact that the evidence shows that, all conditions considered, the rates here are the lowest in the world. They tell us that under government ownership the public would derive a profit from the railways, in spite of the fact that a great majority of State railways do not earn their operating expenses and interest, and, therefore, have a deficit which must be paid from public taxation.

But while to some of us it may seem clear that private ownership, even without regulation, would be preferable to government ownership, the fact must be recognized that it is very doubtful if the public could be convinced of this. The public believes that the only alternatives are either successful public regulation or public ownership. And if regulation fails public ownership very probably will soon follow. Therefore, all who believe in the advantages of private ownership and management should be anxious to see a policy of regulation worked out and adopted which will succeed.

The first essentials of such a policy are that its purpose and

*An address before the Indianapolis Transportation Club, May 11, 1914.

scope be clearly defined, and that it be kept to that purpose and within that scope.

The proper purpose of government regulation is the promotion and protection of those interests of the public that are affected by the concerns regulated. And how may this be best accomplished? The fact that a policy of regulation is adopted implies a conviction that the government cannot best promote and protect the interest of the public by undertaking the management of railways and other similar concerns itself. It may be assumed that if the public believed that government management would be preferable it would adopt that policy. By adopting public regulation the public shows that it wants the duties and responsibilities of management left with the owners and officers of these concerns, and intends that the regulating authorities shall interfere with and control their acts and policies only when they require control for the protection of the public. The function of those who regulate is not an executive function. It is a corrective one. It is not ordinarily their place to tell the managements what they must do any more than it is ordinarily the place of a police department to tell citizens what they must do. It is ordinarily their function to tell the managements what things they must not do, and keep them from doing those things, as it is the duty of a police department to tell citizens what they must not do and keep them from doing those things. Because policemen are required to prevent burglaries and apprehend those who commit them is no reason why the police departments should be authorized to control and direct every action of every citizen in every detail of his life. Likewise, because it is necessary to have laws and commissions to control those public service concerns and their officers who may be disposed to act dishonesty or unfairly, it does not follow that all public service concerns and all their officers should be presumed to be malefactors and extortionists and should have their every business act subjected to scrutiny and direction by public authorities.

The purpose of public regulation is, or ought to be, to conserve all the benefits of private enterprise and management while curbing the excesses and abuses to which they give rise when unregulated. To attempt to control and direct in detail the acts and policies of public service concerns while leaving them in private hands would be to sacrifice all of the advantages of private ownership and management, and secure none of the advantages of public ownership and management.

The purpose of public regulation should be, then, not managerial or executive, but corerctive. Over what parts of the business of a public service concern should this corrective authority extend? It should extend, it would seem, wherever experience shows that abuses will develop which work a detriment to the public. Experience has shown that railways may discriminate unfairly in their rates. Therefore, the regulating body should have authority to correct unfair railway discriminations. Experience has shown that railways and public utilities may charge exorbitant rates. Therefore, the regulating body should have authority to reduce rates that are unreasonable. Experience has shown that private managements, in the absence of competition, or where there is combination, may give poor service. Therefore, the regulating body should have power to correct defects of service. Experience has shown that such concerns may so keep their accounts as to deceive investors. Therefore, the regulating body should have authority to make them keep proper accounts and make proper reports. There is no necessary conflict between the principle that regulation should be given a wide scope, and the principle that it should not seek to arrogate to itself the functions of management. The regulating body which has a proper conception of its functions, and a reasonable capacity for self-restraint, will have no difficulty in correcting unfair discriminations in rates and shortcomings in service without trying to supersede the traffic manager in initiating rates and the general manager in directing operations.

Experence has shown that if regulation is to be at once tolerably intelligent and effective it must be taken out of the hands of both legislatures and courts and intrusted to administrative commissions. We have developed regulation by commission to a greater extent than the people of any other country, and some foreign observers whose opinions merit respect have expressed optimism regarding our experiment in this direction. "There can be little doubt," says Sidney Brooks, one of the leading publicists of England, "that it is in the utilization of such commissions to stand between the local authorities on the one hand and the corporations on the other that the United States is destined to lead the world and make the most valuable of all contributions to the problem of combining private initiative and enterprise with protection of public rights." Another Englishman who is a very keen student of public affairs and economic matters in this country is W. M. Acworth; and recently when Mr. Acworth appeared before the British Royal Commission on Railways he described the authority and work of the Interstate Commerce Commission and advocated the creation of a body with somewhat similar powers in England.

As we have adopted a policy of regulation which in outward seeming approximates the policy which it would appear is adapted to our needs, it might be thought that there could be no reason for serious doubt as to its success. And yet there is much ground for very serious doubt as to whether it will succeed. Why is this? Whose fault is it? What needs to be done to insure the success of regulation?

That the permanent success of regulation is so doubtful is due to the attitude and conduct of the corporations and their representatives, on the one hand, and the attitude and conduct of the public and its representatives, on the other hand.

When the policy of public regulation first began to be adopted most officers of public service corporations resented and resisted it as a meddlesome interference with their work and an encroachment on the property rights of investors. As time passed this general opposition to regulation merely as such declined, and it has finally disappeared. But there are managements of public service corporations here and there which, although some of them are honest and efficient, still regard public regulation in the same old way, and seize every opportunity to flout and defy the regulating authorities and the public which they represent. A short time ago a newspaper despatch described how a vice-president of a large railway system—which, by the way, is notably well managed—had literally booted out of his office a representative of the Interstate Commerce Commission. Now, nothing could be sillier from the standpoint of the railways themselves than such conduct on the part of a railway officer. Its necessary tendency is to incense the regulating authorities and the public against the railways, and, thereby, to promote drastic and harmful regulation. Again, some railway managements continue to do things which are unwise and dishonorable, if not downright dishonest, and the disclosure of which tends to blacken the reputations of all railway managers and managements. For example, right in the midst of the splendid fight which railway officers have been making for less drastic regulation of their rates and earnings were disclosed the facts regarding the financial legerdemain which contributed so largely to throw the St. Louis and San Francisco into bankruptcy and to compel the New York, New Haven and Hartford to suspend its dividend. These disclosures have done more harm to the cause of fair and salutary regulation for railways than the malevolent and ex-

aggerated attacks of many muckrakers and many demagogues. It is regrettable, but it is true, that one imbecile or dishonest railway manager can do more to turn government regulation in the wrong direction than ten capable and honest railway managers can do to turn it in the right direction.

While the success of regulation is menaced by the tactless, unwise, or unscrupulous conduct of a minority of corporation managers, it is menaced even more by the spirit which animates a large part of the public and which to an even greater degree animates most of the public authorities that are directly concerned with regulation. The public began to adopt laws and create tribunals for regulation in a prejudiced, revengeful spirit. This is not surprising, in view of some of the abuses which had prevailed and which it was the purpose of regulation to correct. It is not very surprising that this prejudiced, revengeful spirit has continued to be shown in view of some of the disclosures regarding corporation management which have continued to be made up to the present time. Nevertheless, that spirit has come to be, as respects the managements of most railways at least, entirely unjustified, and it is now, because of the effects which it is producing, very much the greatest obstacle to the success of public regulation.

One of its effects is the continuance of the adoption of legislation to regulate features of corporation management which either ought not to be regulated at all or ought to be left to be dealt with by the public service commissions. For example, there are the full crew laws which the labor lobby has succeeded in getting ignorant or vote-seeking lawmakers to burden the railways with. You have one of them in Indiana, As a means of promoting safety they are worse than worthless. They increase expenses, and they tend rather to increase than reduce the danger of accidents. Why are such laws passed? Sometimes it seems that the public must think that any legislation which will injure the railways is bound to benefit the public. You may say that the public is not responsible for such legislation and does not want it. But in every democratic community or country the people get the kind of legislation and government they really want and deserve. It is mere cant to say they do not. If a democratic government is corrupt, it reflects a corrupt people; if it is vicious, it reflects a vicious people; if it is foolish it reflects a foolish people.

Another menace to the success of regulation is the subjection of railways and other large concerns, such as telephone and telegraph companies, to the requirements of all of the States and of the Federal Government, besides. This might be tolerable if the various regulating authorities would show a disposition to unify and harmonize their regulations and to be reasonable and just. But, unfortunately, the requirements made by them are extremely diverse and often conflicting. And as to most of the States, it is impossible to say whether their laws, or the men they put on commissions to enforce them, are the more ignorant and unjust.

A spectacle which has been presented at the recent hearings before the Interstate Commerce Commission in the matter of advances in freight rates in eastern territory illustrates the kind of regulation and the kind of regulating officials we have in many States. The State commissions, like the Interstate Commerce Commission, are charged with enforcing the regulatory statutes. They are, besides, charged with the regulation of rates. It is tacitly assumed that in passing on the reasonableness of rates they will act as impartial arbiters between the concerns that charge them and those who pay them. Nevertheless, some time ago representatives of the commissions of eight States, all of them west of the Mississippi River, met at Kansas City, adopted resolutions declaring that no advances in rates were justified and designated the chairman of one of these commissions to appear for them before the Interstate Commerce Commission and oppose any advances. These wise and impartial commissioners, without having heard a single word of testimony or argument on either side, settled the entire question to their own satisfaction, and then proceeded to constitute themselves parties to the case. Their representative went to Washington and appeared there, as the record shows, not only for the State commissions which paid his expenses with the money of the taxpayers of their States, but also for two large shippers' organizations, the American National Live Stock Association and the Grain Dealers' Association.

Now, what must we think of the spirit that animates the railroad commissions of those eight States? What must railway men think of their chances of getting a square deal from them? What must investors think of the chance of fair treatment that capital invested in railways has in those States? Manifestly, those State commissions are packed against the railways. Their members have no sense of fairness and only a rudimentary sense of decency. A railway stands as much show of getting a square deal from them as a heretic stood of getting a square deal from the Spanish inquisition under Torquemada, or as a negro accused of rape does from a Southern mob. Railway regulation is in the same condition in those States as the administration of the criminal law was in Kansas and Colorado in past years, when every distinguished citizen of Dodge City or Cripple Creek had his own private burying ground; and it is not without its significance that in the one Western State where railway regulation has been the most drastic the chairman of the commission is an ex-cowpuncher who was once tried for murder, and one of the leading candidates for Governor is a former member of the Dalton gang of bandits. This State, I might add, is one of the eight whose commissions sent Mr. Thorne to Washington. Do you say that the action of these eight commissions did not reflect the public opinion of their States? It can hardly be without significance that in every one of them the members of the commissions are elected by the vote of the people.

Perhaps the most serious menace of all to the success of government regulation is the acceptance by many regulating authorities and a large part of the public of the principle that public service corporations should be limited to what is called a "fair return" upon the fair value of their properties. To this principle it is now being attempted to add the principle that there should not be included in valuation any allowances for increment in value or for value created by the investment of earnings. It is commonly assumed that the Supreme Court of the United States has held that all that a public service corporation is entitled to is a "fair return." The court never has laid down any such principle. What it has held is that a concern rendering a public service may not be restricted to less than a "fair return." Furthermore, it has held that such concerns are entitled to benefit by the increase in the value of their properties. But the public assumes, and perhaps correctly, that the court meant that the public may restrict a public service corporation to barely what might be construed to be a fair return, and a large part of the public has assumed, further, that this minimum which the courts have fixed may properly be taken by the regulating authorities as a maximum.

Now, there are two questions to be considered here. One is, how small a return a public service corporation may be restricted to without confiscation of its property? That is a legal question. The other is, what return ought a public service corporation to be allowed to earn in justice to investors and for the best interests of the public? That is a question of equity and public expediency. Now, it is the question of expediency, not the question of law, with which the public is most vitally concerned, and it is very unfortunate that it has got the two questions confused in its mind. It

seems not improbable that it would be better both for the owners of railways and public utilities and for the public if the constitutional rule that public service corporations cannot be denied a fair return had never been established. Then the question of public policy could be presented to the public without being mixed up and confused with a question of constitutional law. This is the situation in our neighbor Canada, as it is in France; and in both of these countries the profits well managed railways are allowed to earn, and which they are actually guaranteed by the public, are substantially larger in proportion than the public and regulating authorities in this country are disposed to allow to be earned. In our attempts to apply the legal formula of a fair return to the solution of a problem that is purely one of public policy and public expediency we are hindering, and threatening to arrest, the improvement and the increase of our transportation facilities.

Now, these are some of the obstacles to the success of government regulation. Will they be overcome? Will the attitude and conduct of public service corporations and their representatives, on the one side, and of the public and its representatives, on the other side, change enough to enable us to improve our system of regulation until it shall accomplish what such a system ought to accomplish, without hindering and hampering the managements of the concerns regulated, in doing the things which it is their proper function and their right to do? There is no great reason for pessimism on that score. The attitude and conduct of the owners and managers of public service corporations have improved remarkably within recent years. The number of them who now oppose fair and reasonable regulation is relatively small. On the other hand, there has been, especially within the past year, a remarkable change in public opinion with reference to public service corporations, and especially railways. The talk of business men in their offices and at their clubs, and of people generally on street cars and in trains, as well as the comment of the press, shows that the public is convinced that the policy of railway regulation has been growing too drastic, restrictive and burdensome to be either fair to the concerns regulated or beneficial to the interests of the public.

But while there is ground for optimism it would be easy to be too optimistic. Regulation in most of the States is still an utter failure, because it is ignorant, unpractical, demagogic, and even grossly and viciously unjust. It is much better in the nation, but far from entirely satisfactory. We are not out of the woods. It will take years of educational work and effort to remove the numerous formidable obstacles to the success of regulation. The railway financier who holds up his fellow stock holders and the public, the big shipper who practices piracy on both the railway and the little shipper, the railway official who does not know how to get on with the public, the railway official who grafts, the demagogue who furthers his political ambitions by hurling unjust accusations and cooked-up statistics at the railways, the railway commissioner who discloses his own character and prostitutes his office by constantly appearing as the persecuting attorney instead of acting as a just judge, and the numerous people of socialistic temperament and ideas who cannot conceive of any good coming out of a large corporation—these we shall always have with us to oppose all efforts and to defeat many efforts to put and keep regulation on a fair and sound basis. Perhaps we shall overcome them. Perhaps we shall not. If I were a candidate for office or ever interested to become one, I should tell you that all that is necessary to get this great question settled right, is to refer it to the good sense and conscientious judgment of the American people. As I am not a candidate for office and never expect to be, I feel very strongly that it will be necessary to strive strenuously for many years in order to educate the public mind and the public conscience up to the place where they will be disposed and able to solve the problem fairly and intelligently.

PLAN OF THE NEW YORK COFFEE EXCHANGE FOR DEALING IN RAW SUGAR FUTURES

By Franklin W. Hopkins
Member of New York Stock and Coffee Exchanges

THAT New York is soon to have a market for trading in raw sugar futures now seems practically assured. The New York Coffee Exchange has, by unanimous vote of its Board of Managers, decided to admit raw sugar contracts to dealings on that exchange and has prepared and approved all the necessary rules and regulations under which transactions in them are to be conducted. All that now remains to insure the inauguration of dealings in sugar futures on the Coffee Exchange is for the members to vote on the proposed amendments to the by-laws. This will be done on August 21 next, and should the vote of the members be favorable to the project, as now seems most likely, trading in these contracts will begin on the Coffee Exchange on September 1.

Ever since the present movement was started, a little over two months ago, transactions in raw sugar futures have been carried on "over-the-counter," in anticipation of their actual "listing" by the Coffee Exchange, and the widespread interest that has been manifested in these contracts for the future delivery of sugar would seem to augur well for the success and permanency of the project when business is finally begun on the Coffee Exchange.

The matter of trading in sugar futures, as is well known in the sugar trade, is by no means new, while the present plan for dealings in this country is far from being original. For many years sugar futures have been extensively traded in at both London and Hamburg, and fifteen years ago an attempt was made to introduce a market of this kind here. This movement, however, failed, chiefly for the reason that the principal refiners refused to give their co-operation to the project,—if, indeed, they were not positively hostile to it. In the present instance, though, not only is there a noticeable absence of the opposition which the movement started a number of years ago encountered, but there is a manifest disposition on the part of refiners themselves to help along the enterprise.

Those chiefly interested in the movement now under way, and who have been mainly instrumental in bringing it to practically a successful conclusion, scarcely hope for a big market at the outset, but they do hope and firmly believe that when, sooner or later, the benefits to be derived from having a market of this character become apparent to the dealers in and the consumers of sugar, the market for raw sugar futures will take rank with the futures markets for the other great commodities capable of being uniformly classed or graded,—such as grain, coffee, cotton, etc.

It was principally the fact that sugar, alone, of all the leading commodities, was without a market in this country in which consumers could purchase ahead,—say for two and three months' delivery,—the sugar which they knew they would require in the ordinary conduct of their business, that prompted the promoters of the project to inaugurate it at this time. The keen interest with which the Board of Managers of the Coffee Exchange took up the idea and pushed it to a stage which virtually means the actual establishment of such a market, as well as the enthusiasm displayed in other quarters, would seem to indicate that the movement is responsive to a long-felt want.

Under the new order of things, (assuming that the members of the Coffee Exchange vote in favor of the amended by-laws adopted

by the Board of Managers), it will be possible to contract for the future delivery of raw sugar for any month to be agreed upon between the buyer and seller, the unit of such trading being fixed at lots of fifty tons of 2,240 pounds each. Deliveries are to be made between the first and last days of whatever month the contract provides and are to be at the seller's option as to the time of delivery within the specified month, upon five, six or seven days' notice to the buyer.

It is provided in the rules governing transactions in sugar futures on the New York Coffee Exchange that:

"No contract for the future delivery of sugar shall be noticed in any respect, or in any manner recognized by the Exchange, unless both parties thereto shall be members of the Coffee Exchange of the City of New York. The grades deliverable under Contract I shall be raw sugars based on Cuban centrifugal sugar of 96 degrees average polarization outturn and shall embrace all centrifugals first running, and first product of European beet root sugars of 88 per cent net analysis."

The amended by-laws of the Exchange provide for a Committee on Sugar, the duties of which shall be to consider, report and recommend to the Board of Managers for its action, such matters pertaining to sugar as they consider advisable and beneficial to the interest of the Exchange; and which, in conjunction with the Committee on Trade and Statistics, shall, so far as practicable, establish relations with similar Sugar Associations in this or other countries, for information of common interest, as well as for the securing of such market reports, cables, news of the sugar trade and statistics as may be thought needful. The committee shall see to it that the existing import duties imposed by the Government on foreign sugars shall always be posted on the Bulletin Board of the Exchange and shall promptly post any prospective changes, as announced by the authorities. They shall also establish daily at 2 p. m. (on Saturdays at 11:30 a. m.), the New York Spot Quotation for Cuban Centrifugal (96 degrees average polarization) and report the same to the Superintendent of the Coffee Exchange.

In addition to the foregoing, forms of contract have been arranged under which transactions in the different kinds and grades of raw sugar are to be conducted. Thus it will be observed that all the machinery necessary for the carrying on of business in sugar futures on the New York Coffee Exchange has been completed.

INDUSTRY, COMMERCE AND FINANCE

Federal Reserve Board Completed and Organized.—The confirmation by the Senate, late last week, of the appointments of Mr. Paul M. Warburg, of New York, and Mr. Frederick A. Delano, of Chicago, as members of the Federal Reserve Board, making the membership of that body complete, and the formal organization of the Board early this week, have completed the preliminary steps towards the final organization of the Federal Reserve System, except for the nomination by the Federal Reserve Board of the Class C directors of each of the twelve regional reserve banks. Three such directors must be appointed for each of these banks. The organization of the Federal Reserve Board is as follows:

Governor: Charles S. Hamlin, of Boston, Mass. Vice-Governor: Frederic A. Delano, of Chicago, Ill.

Members of the Board:

Paul M. Warburg, of New York, N. Y.
W. P. G. Harding, of Birmingham, Ala.
Adolph C. Miller, of San Francisco, Cal.

Ex-Oficio Members of the Board:

The Secretary of the Treasury.
The Comptroller of the Currency.

The chairman of the Federal Reserve Board is ex-officio the Secretary of the Treasury.

It is expected that the Board, immediately after it has completed its formal organization, will proceed very rapidly with the choice of the Class C directors of the regional reserve banks, whose Class A directors (three bankers from each of the districts) and Class B directors (three business men of each district) have already been chosen by the member banks. The financial situation in the United States, which has been brought about by the general war in Europe, gives an immediate opportunity for the solution of unprecedentedly difficult problems of credit, the currency and exchange through the co-operation of all the banks of the country combined in the Federal Reserve System. Great crops, like the grain and cotton crops, require to be moved, without undue depreciation of prices, and the industries of the country must be kept in operation, notwithstanding their deprivation of the foreign markets upon which they have come to rely in no small degree. And, in general, the commerce of the United States, both domestic and international, must be safeguarded against the disturbing *contrecoups* of a conflict which has disarranged the entire financial fabric of the world. Hence the speedy inauguration of the new banking and currency system in the United States is now not a question of mere advantage and expediency, but of actual imperative need.

* * *

Pig Iron Production in the United States in July.—According to the statistics compiled by the "Iron Age," the production of coke and anthracite pig iron in this country showed a gain of almost exactly 50,000 gross tons over that for June, and also surpassed that of January and February of the current year. It was, however, about 607,000 tons smaller than the production for July, 1913. In the number of furnaces in blast there was a slight decline in July, as compared with June, 1914,—there being 194 furnaces in blast, with a daily capacity of 63,698 tons on July 1, and 188 furnaces with a daily capacity of 63,935 tons on August 1. Thus there was a decline of 6 furnaces, but an increase of 237 tons in the daily capacity of the furnaces in operation. It was noticeable that the increase of production came entirely from the plant furnaces, as the merchant furnaces actually lost ground to the extent of nearly 950 tons per day. The following table shows the production of pig iron in the United tSates for each of the past twelve months, with comparisons for the two previous years, in gross tons (2,240 pounds):

	1914.	1913.	1912.
July	1,957,645	2,560,646	2,410,889
June	1,917,783	2,628,565	2,440,745
May	2,032,686	2,822,217	2,512,583
April	2,269,955	2,752,761	2,375,436
March	2,347,867	2,763,563	2,405,318
February	1,868,670	2,586,337	2,100,815
January	1,885,054	2,735,331	2,057,911
	1913.	1912.	1911.
December	1,983,607	2,782,737	2,043,737
November	2,233,603	2,630,854	1,999,433
October	2,546,261	2,689,933	2,102,147
September	2,505,947	2,463,839	1,937,102
August	2,545,763	2,512,431	1,926,637

* * *

Highway Statistics of the United States for 1913.—Data compiled by the Bureau of Economics of the United States Department of Agriculture show that the total State expenditures for roads during the year 1913 amounted to about $206,000,000. The total mileage of improved and unimproved roads at the end of 1913 was 2,226,842 miles. In addition, it is shown that automobile revenues of the States in 1913 reached $7,820,895.77. State funds available for road building in 1914 are $42,951,981.

The local cash road and bridge expenditures on the part of coun-

ties, districts and townships have not yet been compiled for 1913. The figures for 1912 are given, however, and it is estimated that these are 10 per cent lower than those for the year 1913. The table shows that in 1913 there was a total expenditure of State funds for roads of approximately $38,750,000. The local road expenditures, if a 10 per cent increase over 1912 is correct, would amount to $151,250,000. In addition, there must be counted approximately $15,000,000, as the value of statute labor in working out the road tax. This makes a total outlay for roads in 1913 of about $206,000,000.

In 1904 the total expenditures for labor aggregated a little less than $80,000,000, so that the present annual expenditure for roads is more than two and a half times as great as it was nine years ago.

The fact that the States for 1914 have appropriated nearly $43,000,000, or an increase of more than $4,000,000, over the 1913 appropriation, and an increase of nearly $13,000,000 over the 1912 State appropriation, indicates an increased interest in the State development of good roads. The mileage of roads built with the aid of State funds to the close of 1913 aggregated nearly 21,000 miles, or only about 2,000 miles less than the famous national road system of France.

It is interesting to note that there are now but nine States that set aside no State funds for road building, and there are only seven States which now have no State highway law. During 1913 eight States employed convict labor in road-building to construct 695 miles of road.

Automobile owners paid in licenses and fees in 1913, $7,820,895, nearly all of which was applied to road work. This sum is about one-thirtieth of the total State and local expenditure for roads.

The following table gives the distribution of expenditures, mileage, etc., by States:

HIGHWAY STATISTICS BY STATES.

State.	Original State Highway Law Passed (year).	State Expenditures—Grand Total for Construction, Maintenance and Administration to Jan. 1, 1914.	State Expenditures—Total 1913.	Mileage—Total Mileage of all Roads.	Mileage—Per Cent of Roads Improved.	Automobile Revenues, 1913.	State Funds Available for 1914.	Cash Road and Bridge Expenditures of Counties, Districts and Townships During 1912 (1913 Appropriations are Estimated to be 10 Per Cent Higher than these Figures).
Alabama	1911	$292,039	$127,005	49,639	11.1	$83,000.00	$267,165	$1,644,094

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

IT is perhaps not unnatural, in this disturbed time, when the world's credit fabric appears to be straining and cracking, and when the ordinary course of business, whether financial or commercial, between the United States and foreign countries is almost completely interrupted, that many Americans holding insurance contracts issued by companies abroad, many of them companies whose domiciles are the very countries now engaged in relentless war, should display uneasiness as to the ability of the American branches of these companies to fulfil their contracts. Almost all the marine insurance taken out by Americans is placed with foreign companies; a very large proportion of the fire insurance of the United States is so placed; and foreign liability and accident companies do a very respectable share of the American business in this field. As the American policyholders of these foreign companies read in the daily press of the terrible financial and economic disturbance over practically all Europe, by reason of the war; as they read and hear of the virtually complete cessation of communication of any kind between the fighting groups of European countries, and of our own complete isolation from some of them; as they are informed that the moratorium,—a term little understood, and commonly taken to mean governmental permission not to pay debts,—is in force even in England, the world's financial centre; as they observe the incessant clamor for gold from this country on the part of all the combatants,—as all these things come to their attention, policyholders in foreign insurance companies can scarcely be blamed, if they jump over-hastily to the conclusion that it may be physically impossible for the companies, no matter how willing they may be, to obtain the money to settle losses as they occur. In the past the policyholders of foreign companies have perhaps felt quite as comfortable in the security of their contracts as have the policyholders of American companies proper. The very fact that a company in England, Germany, Russia, France, etc., had the resources to undertake business on a large scale here, with the ocean between its home office and its American branch, has hitherto carried with it a certain presumption of bigness and strength. But now the picture is reversed; distance no longer lends enchantment to the view; and the dire possibilities suggested by the war news get the upper hand in the policyholders mind. So he writes to a public insurance official or otherwise tries to satisfy himself that his insurance contract is not going to prove a total loss to him and worthless in time of trouble.

Of course, every one who knows anything about the manner in which the American business of foreign insurance companies of all kinds is conducted, is fully aware of the absurdity of these fears. The policyholder of what purports to be a foreign insurance company in reality holds no direct contract of insurance with the foreign company itself, but a contract of insurance with the American branch of the foreign company; and this American branch is in reality an independent insurance company, organized under the laws of some State, whose connection with the parent company is simply one of close relationship and support, and not one of commingling of affairs. The American branch of a foreign insurance company is compelled by our laws to maintain itself independently solvent; to keep in this country, in actual cash or securities, the full legal reserve required of any American company conducting the same branch of insurance; to make the same statutory deposits as American companies with the public authorities of States in which it does business; and, in general, to keep itself in precisely as strong a position, notwithstanding that it has the foreign company back of it, as if it had been organized under the laws of some one of our States. The obligation of the American branch to the parent company abroad is to remit to it such profits as it may actually make and as may be determined upon as not required for the purposes of a surplus, over and above legal liabilities in the United States. Hence it must always be in as good a position to pay its losses promptly as a purely American company can be required to be under the law. In fact, in some respects it is more closely supervised and guarded by public authority than is the American insurance company proper. For instance, the securities of the American branch of a foreign insurance company, representing its statutory reserves and surplus, if it has the latter, are deposited with trustees, under a trust instrument which requires an application to the public insurance authorities, before any of the securities may be released by the trustees, whether for the payment of losses or for transmission to the home office of the company abroad. Accordingly, the present chaos in the countries abroad which are the domiciles of the parent companies, can have no effect whatever upon the solvency of the American branches, unless the extreme need of money in those countries should lead to surreptitious depletion of the surpluses and even the reserves of the American branches, an almost inconceivable event.

And yet even the possibility of this event has been foreseen and guarded against by the New York State Insurance Department. On Friday of this week, Mr. Frank Hasbrouck, Superintendent of Insurance, addressed to the United States manager of each foreign fire insurance company having a branch or doing business in the State of New York two memoranda, the one calling attention to the provisions of the trust instrument, under which its securities are held, with regard to the necessary consent of the Department of Insurance for the release or transfer of these; and the second strongly urging the retention on this side of the water of all resources, whether cash or other, even though a part of them might legally be transmitted to the home offices of the companies abroad. The essential paragraph in the first of these memoranda is as follows:

"Under a provision of the trust instrument, you will note that no securities deposited with trustees may be released or transferred to the company without first obtaining the consent of the Superintendent of Insurance. In this connection it seems desirable to advise that the department holds that the trustee or trustees cannot release any securities or cash, other than interest earnings, to the manager or managers for any purpose other than to meet United States loss claims. The releasing of any such funds to the manager or managers so that same may be transmitted to home office will be held to be an evasion of the trust deed. You will further bear in mind the responsibliity of trustees for any and all branches of trust."

A FURTHER CONTRIBUTION BY MR. SAMUEL DAVIS TO THE DISCUSSION OF FEDERAL REGULATION OF INSURANCE

To the Editor of The Market World and Chronicle:

SIR:—"Scrutator Redivivus" returns to the attack, in your issue of July 25th, by insisting that it is over-enthusiastic to expect that Federal regulation of insurance—the result of a Constitutional amendment—would *ipso facto* deprive the States of any control whatsoever over the business. The incredulity he expresses is shared by others. For this reason President Kingsley recently obtained the opinion of an eminent Constitutional authority, former United States Senator John C. Spooner, hoping thereby to convince the doubting "Scrutators." Nevertheless it is even so. There is no room for doubt that the States must let go completely. But before adducing proof let us dispose of the exceptions taken by "Scrutator" to my statement that the law of insurance takes its rise in the *lex mercatoria*.

He says: "The traditions of the law are to be found in the common law of the Anglo Saxon race as far back as that law deals with questions of insurance." The authorities, I fear, are against this statement. In 1845 Barcelona adopted ordinances regulating insurance. Dr. Hoffman says:[1] "By a decree of Venice in 1468 insurance cases were to be tried before the consular mercantile court, and a complete code of insurance laws was made for Florence in 1523." According to Park: "The practice of insurance was introduced from Italy into England through the Lombards."[2] Professor Huebner also says: "Finally there followed the epoch-making Ordinance de la Marine, of 1861, which became the model for practically all the modern codes of commercial law on the Continent, including the law of marine insurance."[3] And, what is more to the point, he adds: "In England, on the contrary, the development of the law concerning insurance did not begin to assume such clear and definite form until almost the middle of the 18th century. It was then that Lord Mansfield in his efforts to formulate the commercial law of England, began to draw his legal principles very largely from the commercial ordinances and codes of the Continent."[4] In the Supreme Court case of the New England Marine Insurance Company vs. Dunham[5] it is said: "The contract of insurance is an exotic in the common law." And lastly may be cited Professor Vance, who says: "In order to determine what rules should be applied in deciding these causes, he looked to the various authorities that were in vogue on the Continent * * *. Thus in the skilful hands of Lord Mansfield the essential principles of the law merchant were incorporated into the common-law system of England, and the common-law courts thereby rendered competent to take adequate cognizance of all questions involving insurance."[6] These few citations (there are many more) seem to show conclusively that insurance law was not part of the common law of England, but was introduced from the Continent as a part of the law merchant.

The authorities are also numerous which hold insurance to be itself commerce. For example, it is said that "Franklin, Wilson and Hamilton, all members of the Constitutional convention, are on record to the effect that insurance was then commerce."[7]

Dr. Bigelow, quoted at home and abroad as a law writer of eminence, has this: "Congress has power under the Constitution to regulate commerce between States. 'Commerce' was no doubt an unfortunate word to use; but what the framers of the Constitution were aiming at is made plain enough in their debates and in the notorious facts of the times, if not in the final language of the Constitution itself; they were endeavoring to break down the barriers to freedom of intercourse between the States—business intercourse especially of all kinds. They, however, without due caution used the word 'commerce.' instead of business or some such term, and the Supreme Court of the United States, looking at the letter alone, could accordingly say, and did say, that insurance was not commerce, and hence that the States were not prohibited from discriminating against each other in regard to that important subject. And so the business of insurance was put in fetters not intended."[8] Other critics of the Supreme Court, in respect of the decision in "Paul vs. Virginia,"—and these authoritative writers on Constitutional law,—are Mr. Watson[9] and Professor Willoughby.[10]

In his second letter "Scrutator" holds that a Virginia case, Harris vs. The Commonwealth,[11] "assimilates insurance to labor and not to commerce." But this case does not do anything of the sort. It was a criminal prosecution against some insurance agents for combining to fix rates. And because the court relied upon "Paul vs. Virginia," it held that insurance was not a "commodity or a necessity to life within the spirit or letter of the law against engrossing." Then the court being under the necessity of deciding the issue before it, namely, whether the defendants were criminally liable for their combination, found a decision holding that combinations of laborers were in the absence of statute not unlawful for the purpose of increasing their wages, and thereupon it decided that a combination of insurance agents was not unlawful either. Thus the court does not assimilate insurance to labor. It does assimilate combination with combination and decides the issue accordingly. In the Texas case[12] cited by "Scrutator" we have the court construing a penal statute, prohibiting combinations to prevent competition in any article of merchandise intended for public use. Again the court referred to "Paul vs. Virginia," and held that the defendants were not guilty, because insurance was not a business of commerce nor one in which the public has an interest. So in the case of Hatch vs. Reardon,[13] the court held: "There is not the shadow of a ground for calling the transaction commerce"; and Judge Holmes expressly refused to consider what the situation would be if the acts in question were commerce. The court does not decide that brokers and commission men are not ordinarily engaged in commerce; it simply holds that in this case they were not.

The necessity for clear thinking and careful discrimination is apparent, otherwise our readers will be mislead on the tremendously important issue of Federal control. None of the cases herein considered can possibly be found to cast a doubt on the clear-cut status of insurance, if lawfully regulated by Congress. Every one of them is based upon "Paul vs. Virginia." If that case is overruled by a Constitutional amendment, as was the famous case of Chisholm vs. Georgia,[14] in 1798, by the 11th Amendment, all the decisions based upon it fall with it. In all probability, it was this consideration which prevented the Supreme Court, in the Deer Lodge County case, from reversing "Paul vs. Virginia." It is also inter-

esting to note that the court's view in the Texas case has recently been overruled by the United States Supreme Court in German Alliance Insurance Company vs. Lewis,[15] which holds that insurance "is charged with a public interest," whereas the Texas court, taking "Paul vs. Virginia" for its text, held that the insurance business was not one in which the public has an interest. So far as the courts are concerned, they are beset with difficulties of their own making, as is clearly shown by the dissenting opinions in the Deer Lodge County and the German Alliance cases. These difficulties and the serious situation of the insurance business emphasize the great need of adding a few lines to the Constitution.

"Scrutator" is surely mistaken in thinking that the State has reserved power of any kind over matters expressly delegated to the National Government. Such subjects are given entirely and exclusively to Congress. Within its delegated sphere every foot of this country is United States territory first. By the 14th Amendment, even the citizenship of persons in a given locality is first Federal and then State. No instance of State taxation of a Federal franchise can be found. Property which is physically within the confines of a municipal government may be taxed, i. e. real estate, machinery, and the like. But no excise tax, no tax on gross or on net premiums, no regulation as to sub-standard or other forms of business, no requirements concerning surrender values can possibly be prescribed by any State Government, when once the regulation of insurance is lawfully given to Congress. One may amuse oneself with the decisions of State courts if he will, but this is a region where the Supreme Court alone rules, "anything in the Constitution or laws of any State to the contrary notwithstanding."[16] In Brown vs. Maryland,[17] Chief Justice Marshall remarks: "It has been observed that the powers remaining with the States may be so exercised as to come in conflict with those vested in Congress. When this happens that which is not supreme must yield to that which is supreme. It necessarily results from this principle that the taxing power of the State must have some limits. It cannot interfere with any regulation of commerce." And the opinion of Justice Bradley, in a leading case,[18] is also illuminating. It shows definitely that the State is in no way permitted to regulate, tax or hamper the conduct of a matter under the superior jurisdiction of Congress. As a summation of the whole subject he quotes the remarks of the Chief Justice in a previous case[19]: "We have repeatedly held that no State has the right to lay a tax on interstate commerce in any form * * * for the reason that taxation is a burden on that commerce and amounts to a regulation of it which belongs solely to Congress"; and goes on to say: "This is abundantly shown by the decisions, which are clear to the effect that neither licenses nor indirect taxation of any kind, nor any system of State regulation can be imposed upon interstate commerce; and that all acts of legislation producing any such result are to that extent unconstitutional and void." The Minnesota Rate Cases affirm this rule. In Simpson vs. Shepard,[20] the court says: "The grant in the Constitution of its own force, that is, without action by Congress, established the essential immunity of interstate commercial intercourse from the direct control of the States with respect to those subjects embraced within the grant which are of such a nature as to demand that if regulated at all their regulation should be prescribed by single authority. It has repeatedly been declared by this Court that as to those subjects which require a general system or uniformity of regulation, the power of Congress is exclusive."

But in order to prevent all necessity of freshly adjudicating the boundaries of State and Federal control, even in the single State which incorporates the insurance company—in which case the incorporating State only has some small control over intrastate questions– I would have the companies exchange their State charters for others to be granted by Congress, which has frequently in the past exercised its right to grant charters of incorporation. When by a Constitutional amendment the business or commerce of insurance shall be placed within the exclusive control of the National Government, then Congress will enact the legislation necessary for it to assume control. The creation of National insurance corporations, the enactment of a comprehensive code for regulating the business and the establishment of an adequate bureau of supervision will follow, in due course, as part of the incidental power belonging to Congress for the purpose of making effective the mandates of the Constitution. In conclusion, the thanks of those interested in placing insurance upon a National basis are due to "Scrutator Rerum" for raising the questions which he brings forward. The more the subject is studied and discussed the greater will be the interest aroused in the minds of those whose present indifference may result from a belief that the cause does not promise success. It is something to have abandoned the wrong road and to have entered the right path. The goal is sure to be reached. Yours truly,

Boston, Mass., July 29, 1914. SAMUEL DAVIS.

[Editor's Note.—We have obtained from "Scrutator Rerum" the following comment upon this second letter from Mr. Davis:

I must confine myself to the briefest of answers to Mr. Davis' contentions. At the start, I freely admit that by the introduction of marine insurance into the discussion he has apparently turned my flank on the question of a connection between the law of insurance and the law merchant. He is, of course, quite correct in alleging that marine insurance had its origin with merchants, was from the start governed by the law merchant, and to a large extent is still so governed. In my previous communications, I have had in mind only those kinds of insurance which are carried on within the United States and whose subjection to Federal regulation is primarily desired. I have left to one side marine insurance as *sui generis*, both in its method and in its law, and as not interstate in any but a very limited sense. I have supposed that the insurance which President Kingsley, Mr. Davis and other advocates of Federal regulation are concerned with is the insurance of life and property within the United States, and not on the high seas. I wish to call attention to the fact, however, that both in the English speaking countries and on the Continent of Europe, the law of marine insurance has been and is to-day something quite distinct and different from the law of life insurance, fire insurance, liability insurance, accident insurance, etc. I do not assert that no reflex and analogical influences of the law of marine insurance upon the law of the other forms of insurance may not be found. But the fundamental theory of marine insurance,—a participation of merchants in losses common to them all,—is different from the theory of the contractual forms of indemnity insurance. The very forms of policy show this, and the law recognizes it. The law of life insurance, fire insurance, and the other similar insurance has developed within the past two centuries, beginning with the time when the contracts of these insurances began to be looked upon as not mere wagers, but as having an actuarial basis which rendered them legitimate. The law of these insurances has been worked out in the civil, and not in the commercial courts.

But this is now a non-essential matter, and I shall not attempt

[15] U. S. Adv. Ops., 1913, page 613.
[16] Constitution of the United States, Article VI.

to review Mr. Davis' interpretation of the decisions of the courts to which I have previously referred. The interested reader may turn to those decisions for himself and decide whether my interpretation of their implications or Mr. Davis' is the more consonant with a sound conception of their historical and analytical significance.

With regard to the matter which has now become the essential one, the character of the power that would be vested in the Federal Government by a Constitutional amendment conferring upon it the right to regulate insurance,—I am glad to observe that in one respect I am absolutely at one with Mr. Davis. The power so conferred would be co-extensive with the existing power to regulate interstate and foreign commerce, no greater and no less. And the Supreme Court has decided in numberless cases that the power of the Federal Government to regulate interstate and foreign commerce is plenary, extends to every portion of the territory of the United States, and applies directly to every citizen of the United States. The Supreme Court has also decided in almost as many cases that the States may exercise this power in connection with matters within their jurisdiction, in so far as Congress has not exercised it; and that Congress itself must not exercise it in contravention of other provisions of the Constitution, nor in derogation of the police power of the States, reasonably exercised, nor of the power of the States to tax property within their several jurisdictions. I need not cite cases on these points other than those I have already cited in my previous communications; but a useful collection of them may be found in a recent digest of the decisions of the Supreme Court upon the "Power of Congress over Interstate Commerce," compiled for the use of the Committee on Interstate Commerce of the Senate of the United States.

That the power of the Federal Government to regulate insurance will not do away with the right of the States to apply reasonable police regulations to insurance nor to tax the property of insurance companies within the jurisdiction of the States cannot, in the light of the decisions, be doubted for a moment. And, as I have said before, the opportunities for the exercise of the police power are infinitely more numerous and of larger scope in the case of insurance than in that of interstate commerce. How, for instance, would Mr. Davis go about proving that the so-called Robertson Law, in Texas, requiring life insurance companies doing business in that State to invest within the State moneys collected by them from the citizens of the State, is not a valid exercise of the police power? And if he failed to prove this, how would he prove that the taxation of these moneys, whether kept in cash or invested, is beyond the power of the State? And how would Federal incorporation help in either respect? The Union Pacific Railroad, with its Federal charter, is in no different position, as regards the States through which it passes, than any State-incorporated railroad.

I must not intrude upon your space further, nor shall I again have anything to say in your pages on this subject. Like Mr. Davis, however, I am glad the discussion has arisen, because I, too, deeply feel the importance of having the managers of insurance in this country clearly understand what they will be getting, if the Federal Government takes over the regulation of insurance. —Speculator Rerum.]

THE COTTON MILL FIRE HAZARD IN THE UNITED STATES

THE quarterly bulletin of the National Fire Protection Association for July gives the following discussion of cotton mill fire hazard and causes in the United States:

There is probably no class of property which has received more study by fire protection engineers than cotton mills. The record given in this issue is based on fires for the years 1912 and 1913 only, and consequently permits of a comparison between present conditions and those of a few years ago, which were contained in the April, 1909, "Quarterly," which will be referred to as the old record. This old record embraced 4,510 fires, in 1,423 of which automatic sprinklers operated. In some of the tables the values of this old record have been given in heavy type to assist in the comparison. The efficiency of water supplies to sprinkler systems has been illustrated by diagrams which help to bring out many of the interesting points in such a study.

The new record of cotton mill fires does not present any radical differences from that given in the April, 1909, "Quarterly." As may be expected, the fires originating from pickers, openers, etc., constitute approximately one-half of the known causes of cotton mill fires. It is interesting to note a slight decrease in the number of fires due to spinning, especially in view of the fact that our table of losses indicates that fires occurring in spinning rooms have a high average loss. The fires attributed directly to matches have doubled in amount, which would seem to indicate that the American people are becoming more and more careless with matches. The increase in the percentage of fires due to lightning is noticeable but does not offer any ready explanation. Taken as a whole, the record apparently indicates that more attention has been given to special hazard causes, since that figure has dropped from 85.6 per cent in the old record to 79 per cent in the new record.

The causes of the fires naturally influence the statistics showing the rooms in which fires occur; so practically the same differences between the two records are found as were indicated in the tables of causes. Fifty-six and eight-tenths per cent of all fires occur in the picker or opener rooms, while 7.5 per cent are in the conveyor tube, and 10.6 per cent in the carding room.

It is always interesting to study the amount of loss in fires and particularly the relation of this loss to the location of the fire. A table giving this information in the buildings where sprinklers were installed has been prepared and brings out several important points. Many people have the impression that picker fires under sprinkler protection are trifling matters and should not be given serious thought even if they do occur frequently. Although an average of $284.37 for such fires is small in proportion to the total value of the property, nevertheless several such fires each year make up an appreciable total. It should also be noticed that waste house fires average $349.39, as compared with $297.46 in carding rooms, and $295.83 in conveyor tubes. The most important fact brought out by this table is the high average loss in spinning rooms, namely, $1,242.26, which value was not influenced by any especially large individual loss.

The percentage of day fires was 84.9 per cent, as compared with 88 per cent in the old record, and the percentage of fires while the plant was in operation remains practically the same, being 90.9 per cent, as compared to 92 per cent in the old record. It is worthy of note that a slight increase has taken place in the number of fires discovered by the watchman, with a corresponding drop in those discovered by employes.

The effect of automatic sprinklers in the new record does not show so large a percentage of fires extinguished or with no claim as in the old record, but on the other hand it is much more favorable in respect to large loss and unsatisfactory fires. It is indeed a remarkable showing for a class of property as hazardous as cotton mills, to be able to find only two unsatisfactory and five fires having a loss of more than $5,000 out of 578 such fires reported. It should be further considered that in every one of these the fire had a sufficient start to cause the sprinklers to operate.

The conclusion to be drawn from a review of such a record can only emphasize the tremendous value of automatic sprinklers as a means of protection, particularly in this class of property. In general, it would seem as if the showing of the new record is better than that of the old record, and indicates a slow but steady improvement in cotton mills as a fire risk.

AMERICAN LIFE INSURANCE COMPANIES AND THE WAR IN EUROPE

THE general war in Europe has made necessary decisive action on the part of the American life insurance companies doing business in European countries. These companies have outstanding in Europe a large volume of policies and of late years have been able to compete advantageously with the native companies. They have from the beginning been fully aware of the increased risk involved in the excessive militarism of the European countries, and have protected themselves in two ways: first, by writing policies absolving the companies from liability in case of death in military service, and, second, by charging premium rates high enough to cover this risk. It is understood, however, that owing to the extent of the present outburst of hostilities among the European countries and the probably relentless character of the struggle, all the companies doing a European business of importance have for some time past been declining new business, except in England and to some extent in France, though in both cases with a strong war-risk clause. Some idea of the amount of European business which American companies have on their books may be obtained from the recently issued German official figures of the business done and outstanding in Germany in 1912, for the four great American companies operating in that country. The figures, in marks [mark = 23.8 cents], are as follows:

LIFE INSURANCE BUSINESS OF AMERICAN COMPANIES IN GERMANY.

Name of Company.	Outstanding Life Insurances. End of 1912, Marks.	End of 1911, Marks.	Annuities 1912, Marks.	Premium Income 1912, Marks.
Equitable	34,330,624	37,900,095	49,210	827,038
Germania Life	174,250,031	170,952,491	109,518	7,601,573
Mutual Life	41,440,243	45,460,464	75,400	1,146,662
New York Life	285,530,851	263,184,946	314,868	14,021,860
Totals	835,551,809	817,497,996	548,986	23,597,133

During 1913, the two American companies which were expanding their German business, the New York Life and the Germania Life, wrote new insurance to the amounts of 33.3 million marks and 16.6 million marks, respectively. On the contrary, the Equitable and the Mutual Life have been gradually withdrawing from their European business, as the above figures indicate.

As to the manner in which the present European situation is being handled by the most active of the American companies in the European field,—the New York Life,—a public statement was made early this week by President Darwin P. Kingsley, of that company, of which the essential portion, as published in the New York "Evening Post" is as follows:

"Our headquarters for Europe is in Paris. At the present time, of course, there is no communication between Berlin and Paris, Vienna and Paris, and probably none between St. Petersburg and Paris. At the same time, our contract obligations must be currently carried out, and it will become necessary to modify the organization of our business until such time as the present conditions pass away. The business of Russia, Germany, Austria-Hungary, and France, and possibly even of England, will temporarily have to be treated as though it were a separate and distinct company.

"Our representatives in charge within each country will be given authority to sign for the company whatever papers may be necessary currently to carry out the company's obligations. It should be remembered that in each of these countries, except England, we have a deposit of liquid securities, mostly the bonds of their own governments, equal to the mathematical reserve on our business. Our local managements in case of necessity could sell these securities for current needs, but that contingency seems to be remote, because the bankers of the companies in each country, in case the current income should not be sufficient to meet the current obligations, will undoubtedly extend whatever credit we may need until communication between the different countries of the world is again restored.

"In the matter of mortality we have no fear. Business has been done in Europe for a long time in the expectation that something like this might happen. We are protected by the premium rates charged and the conditions in the policies themselves. Moreover, there is no probability that the actual mortality of people engaged in battle, either on the land or on the sea, will cause any very appreciable increase in our death claims. The civilians who have our policies are almost wholly of an age and in such positions that their liability of service is slight. The experience of life insurance companies in previous wars all confirms this.

"Of course, under existing conditions, no new business whatever will be written, with the possible exception of some business in France and in Great Britain. All such policies will contain a strong war clause."

RESULTS OBTAINED BY BRITISH MARINE INSURANCE COMPANIES IN 1912 AND 1913

THE now completed list of annual reports of British companies doing a strictly marine business makes it possible to survey the completed results of these companies for 1912 and indicate the results for the business written in 1913. British marine companies keep their accounts open for two years, so that complete figures are not yet possible for 1913. In fact, many settlements are made even in the third year, against which liability the companies are obliged to maintain a reserve even after the expiration of the year after that in which the policies were written.

The year 1912 found eight British companies doing a strictly marine business. The following table, compiled by the London "Times," shows the net premium income of these companies and their net profits, with a comparison with the profits obtained on the 1911 account:

UNDERWRITING ACCOUNTS OF 1912.

Company.	Net Premiums.	Net Profit After Meeting Claims and Expenses and Providing for Further Claims.	Pct. of Prems.	Corresponding Profit on the 1911 Accounts Amounts.	Pct. of Prems.
British and foreign	£513,527	£77,251	15.0	£85,583	18.1
Indemnity	435,860	30,037	6.89	62,522	19.
Maritime	290,350	25,730	8.9	7,849	3.
Merchants	251,536	1,802	.7	16,654	6.5
Reliance	135,763	12,597	9.2	20,507	15.9
Sea	404,144	27,580	7.0	25,048	7.
Union	562,593	37,394	6.6	35,485	7.5
World	256,524	4,879	1.9	23,366	9.1
Totals	£2,850,306	£217,270	7.6	£277,014	10.9

It is interesting to compare these results with the results of British marine insurance companies for the past ten years. The following table, from the "Australasian Insurance and Banking Record," shows that for the last four years marine underwriting has been profitable for the companies, making up in some degree for the disastrous experience of the four years, 1905 to 1908, inclusive:

UNDERWRITING RESULTS OF TEN YEARS' PERIOD, 1903-1912, INCLUSIVE.

Year.	Total Net Premiums.	Total Claims and Expenses.	Profit or Loss.	Pct. of Premiums.
1903 (11 companies)	£2,917,876	£2,808,463	£109,513	+3.7
1904 (11 companies)	2,949,263	2,803,686	+ 145,577	+ 4.9
1905 (11 companies)	2,862,523	2,915,510	— 52,987	—1.9
1906 (10 companies)	2,703,079	2,780,029	— 76,950	—2.8
1907 (9 companies)	2,534,428	2,548,588	— 14,160	—0.6
1908 (9 companies)	2,318,078	2,365,389	— 47,311	—2.0
1909 (10 companies)	2,790,173	2,644,736	+ 145,437	+ 5.2
1910 (8 companies)	2,285,903	2,129 081	+ 156,822	+ 6.9
1911 (9 companies)	2,751,185	2,483,721	267,464	9.7
1912 (8 companies	2,850,306	2,633,060	217,246	7.6
	£25,962,914	£26,112 263	£850,651	3.2

For 1913, only figures for first year settlements are as yet available. These figures, with corresponding figures for 1912, were as follows:

FIRST YEAR'S SETTLEMENT ON THE 1913 ACCOUNT.

Company.	Net Premiums.	First Year's Settlements and Expenses Amounts.	Pct. of Prems.	Corresponding Figures in 1912 Accounts Amounts.	Pct. of Prems.
British and foreign	£511,037	£214,003	41.2	£214,583	41.8
Indemnity	431,013	140,775	32.8	163,206	37.5
Maritime	0, [illegible]	113,657	39.1	103,210	37.3
Merchants	[illegible]	78,354	32.1	87,788	34.9
Reliance	[illegible]	[illegible] 41	31.8	49,072	36.1
Sea	[illegible]	[illegible] 07	28.	152,954	37.8
Union	[illegible]	[illegible] 86	29.8	225,759	40.1
World	[illegible]	[illegible] 1	[illegible]	87,613	34.2
Totals	[illegible]	[illegible] 26	30.2	£1,069,585	38.2

The final table shows the funds, interest receipts, and dividends payable on account of 1913:

FUNDS, INTEREST RECEIPTS, DIVIDENDS AND AMOUNTS WRITTEN OFF INVESTMENTS FOR 1913.

Company.	Funds, excl. Capital at 31 12 1913.	Interest Receipts.	Amounts to Be Paid in Dividends.	Amounts Written off Investments.
British and foreign	£1,871,754	£70,461	£70,978	£64,761
Indemnity	971,924	33,688	36,850	20,000
Maritime	462,658	17,924	12,500	20,000
Merchants	339,996	14,834	9,375	4,592
Reliance	303,637	11,443	14,125	16,000
Sea	646,682	38,154	40,000	35,000
Union	872,405	31,187	21,255	26,176
World	218,409	8,833	5,000	19,520
	£5,687,465	£232,524	£210,083	£206,049

This table sheds some light upon the source from which dividends have been paid in former years, when the underwriting yielded small profits or even losses. In these earlier years dividends were paid out of the profits, and such success attended marine underwriting that, in addition to the payment of dividends, very large reserves were accumulated. Later, in the periods of depression and underwriting loss, these reserves proved a boon to shareholders, dividends having been frequently paid out of the interest earned from investments. On the other hand, of recent years it has been a matter of no small moment in the companies' finances that large amounts have had to be written off for depreciation of investments.

NOTES ON INSURANCE, AMERICAN AND FOREIGN

Fire Losses in July.—The losses by fire in the United States and Canada during the month of July, as compiled from the carefully kept records of the "Journal of Commerce," aggregate $17,539,800, as compared with $20,660,900 during the same month last year. The following table gives a comparison of the losses by months this year with those of the same months in 1913 and 1912:

	1912.	1913.	1914.
January	$35,653,150	$20,193,250	$23,204,700
February	28,601,650	22,084,600	21,744,200
March	16,650,850	17,511,000	25,512,750
April	16,349,400	16,738,250	17,700,800
May	21,013,950	17,225,850	15,507,800
June	16,103,450	24,942,700	23,348,000
July	15,219,100	20,660,900	17,539,800
Total for seven months	$149,591,550	$138,906,550	$150,558,050

* * *

An Insurance Census of Argentina.—According to the "Review of the River Plate," the Commercial and Industrial Department of the Ministry of Agriculture has published the results of a census recently taken of the insurance business in Argentina. Prior to the putting into force of the first Argentine Commercial Code in 1859 it was impossible for insurance companies to be formed in the country. In 1864 there were seven insurance companies working, of which one was marine, two fire, three life, and one unspecified. One of these exists to-day, and of those actually existing in the country one, La Estrella, an Argentine company, and one foreign, the London Assurance, commenced operations in 1865. Prior to 1897 foreign companies did not have to put up any guarantee, but the law sanctioned in that year obliged foreign fire companies to deposit $300,000 paper, and other companies $150,000 paper. Companies operating in more than one class of risk have to put up a guarantee for each extra risk of $100,000. To-day there are eighty-five insurance companies operating in the country, of which fifty-two are Argentine, twenty-four English, three German, two American, one Brazilian, and one Swiss. Of the National Companies thirty-six have their head offices in the Federal capital and

sixteen in the interior. Of the eighty-five companies, eighty are limited liability, two co-operative, and three mutual. The paid-up capital of the national companies is $27,413,373 paper, and that of the foreign companies $115,892,100. The reserves of the companies are: National, $71,393,711; foreign, $46,642,897. The risks in which the companies work are:

	National.	Foreign.
Fire	36	23
Marine	7	6
Accident	19	3
Life	26	8
Hail	16	..
Various	11	3

Classification according to risk:

	National.	Foreign.
LIFE.		
Policies in force	32,677	13,622
Value of policies	$215,372,821	$137,510,445
Premiums	12,030,942	5,713,512
Claims paid last year	1,916,404	1,042,946
FIRE.		
Policies in force	117,806	57,163
Value of policies	$1,600,118,447	$1,468,514,268
Premiums	11,361,148	1,334,204
Claims paid last year	3,912,613	3,740,780
MARINE.		
Policies in force	11,190	26,780
Value of policies	$47,412,884	$140,879,015
Premiums	1,055,547	1,020,077
Claims paid last year	454,806	624,628
ACCIDENT.		
Policies in force	9,371	955
Value of policies	$174,227,280	$17,957,619
Premiums	2,595,098	226,093
Claims paid	1,253,308	163,893
HAIL.		
Premiums	$6,781,146	.....
Claims paid	3,403,784	.....

The total premium income from all classes of insurance for one year was: National, $34,188,414; foreign, $15,343,872. The claims paid in one year were: National, $11,018,762; foreign, $5,592,243.

Insurance Agents and Brokers Must Pay Income Tax on Renewal Commissions.—That commissions on renewal premiums for insurance are taxable under the Income Tax section of the Tariff Act, and must be returned as income for the period in which they were received, was a ruling handed down by the Commissioner of Internal Revenue, William H. Osborn, on August 8. Moreover, this ruling is retroactive in respect of commissions on renewal premiums received during the period March 1, 1913, to December 31, 1913. On this point the ruling says:

"Therefore, commissions on renewal premiums received between March 1 and December 31, 1913, are taxable income for that period and should be included in returns of income for 1913.

"Where commissions on renewal premiums received by individuals between March 1 and December 31, 1913 (including commissions on renewal premiums on business written prior to March 1, 1913, and payable and paid subsequent to that date) were not included in returns of income of such dividends for 1913, they should file amended returns and include in such amended returns the amount of said commissions on renewal premiums."

* * *

Accident and Burglary Insurance in Italy.—According to statistics published in "L'Assicurazione," eight companies transacting ordinary accident insurance collected in 1912 in premiums 17,505,375 lire [lira = 19.3 cents], and paid for claims 10,651,921 lire, equal to a loss ratio of 62 per cent, and the charges were equal to 27 per cent on the premium income. Workmen's compensation insurance was carried on by seven companies, and their experience, as in other countries, was unfavorable, as they paid on a premium income of 20,580,374 lire for claims 16,546,730 lire, or 82 per cent, while the charges amounted to 23 per cent, causing a loss of 5 per cent on the premium income. Burglary insurance business develops slowly in Italy, the total premium revenue of six companies reaching only 656,157 lire, but the claims thereon were equal to not more than 42 per cent, while the charge rate was equal to 30 per cent.

* * *

French Vital Statistics in 1913.—It is evident from statistics just published, says the "Insurance Observer," of London, that the decline of the French birth-rate has not yet been checked. Last year the number of births was 745,539, against 750,651 in the year before. This is the lowest total which has ever been reached, with the exception of 1911. In the years from 1872 to 1875 the average was about 950,000. Since 1907 it has been below 800,000. In less than forty years the birth-rate of France has diminished by 200,000 a year. This decline has become still more disquieting when compared with the birth statistics of other countries. In 1912 the excess of births over deaths in France was only 15 per 10,000. In the same year it was 158 in Belgium, 140 in Italy, 130 in Hungary, 127 in Germany, 107 in Austria, and 105 in England. In thirty-eight departments out of the eighty-seven the deaths last year exceeded the births. In 1912 this was only so in thirty-one departments. The birth-rate is the highest in Pas de Calais (266 per 10,000) and in Brittany and on the Northern coast generally, It is lowest in Burgundy and the valley of the Garonne, where the Department of Gers has only 129 births per 10,000. Thirteen thousand one hundred and sixty-nine fewer marriages were celebrated last year than in the year before. On the other hand, the number of divorces has increased by about 500. There were 15,076 last year, or 761 per million of the population.

* * *

Bills of Lading and Insurance.—A recent paragraph in the London "Times" says that in view especially of the recent epidemic of fires at Bombay underwriters are now giving careful consideration to the question of "clean" bills of lading. The problem has really been apparent for many years and is not confined to India. The difficulty, simply expressed, is that if a shipowner is at all lax in issuing clean bills of lading the underwriter may be asked to pay claims which really should never be placed before him. Thus if, as has happened before now, salt water is used to extinguish fire among cotton in India, and cotton be shipped in a damaged condition under a "clean" bill of lading, the underwriter might later be called upon to pay a claim on the ground that the cotton was damaged by sea water in the course of transit. It is maintained that the insurance companies have frequently been asked to pay claims in this manner, and the suggestion is made that owners, no doubt never thinking that marine underwriters might be held responsible, have granted a clean bill in exchange for letters of indemnity. The proceeding, perhaps, would be harmless enough if it merely meant that the owner desired a guarantee that he was not liable for damage done before shipment; but it would assume a very different complexion if it were ever shown that the owner issued clean bills against dirty merchandise, realizing at the time that marine underwriters might be called upon to pay for the damage as having been caused in transit. The difficulty probably only needs to be thoroughly ventilated to be removed. There are fire insurance companies and marine insurance companies, and in well-conducted businesses neither set of underwriters should be called upon to pay for liabilities properly attaching to the other.

* * *

Employers' Liability Insurance in Belgium.—Mr. Arthur J. Cook, in a recent issue of the "Post Magazine and Insurance Moni-

tor," of London, summarizes the employers' liability insurance business of Belgium in 1912 as follows:

The following particulars respecting the native and foreign companies which transact employers' liability insurance in Belgium are extracted from the accounts of the various organizations for 1912, which have been published in the official "Moniteur Belge."

The figures of the foreign companies refer only to Belgian business. [Franc 19.3 cents.]

Summary:	Premiums Received (Frs.)	Claims Paid (Frs.)
Belgian companies	14,253,835	10,199,324
British companies	4,312,501	3,649,092
French companies	2,235,301	1,559,450
Swiss companies	4,798,887	3,366,015
Totals	25,600,524	18,773,881

In 1910 the total premiums received amounted to francs 22,406,580 and the claims paid to francs 14,888,341. In the above sums are included premiums which fell due in 1911 and were not paid until 1912, but not those that were unpaid at the close of the latter year—some of which may never be received. On the other hand ,each association had unadjusted claims on its books that are not included in the above items, but claims of 1911 which were paid in 1912 are added. As in other countries, the temporary disablement cases unduly increase in Belgium, notwithstanding the efforts made to check malingering.

* * *

Infant Mortality According to Order of Birth.—The old belief, still common among the laity, that first-born children are endowed by nature with greater vitality and longevity than last-born, says the New York "Times," has induced Dr. Alfred Ploetz, of Munich, Germany, to make an exhaustive study to ascertain if this were true. He compiled the returns from a very large number of families of the nobility, and his figures show, generally speaking, that the vitality of first to ninth-born children varied very little, but that from the tenth to the nineteenth-born the mortality was markedly greater. Dr. Ploetz's figures, published in the "Archiv für Rassen und Gesellschafts-Biologie," appear in a recent issue of the "Journal of Heredity" of the American Genetic Association.

In the following table, Dr. Ploetz has made groupings of first-born, second-born, and so on, and it was his object to find out how many of these died before the fifth year:

Order of Birth.	Number of Children.	Per Cent Died.
First-born	614	26.4
Second-born	539	24.9
Third-born	455	26.4
Fourth-born	386	25.6
Fifth-born	311	26.0
Sixth-born	249	26.1
Seventh to ninth-born	463	26.3
Tenth to nineteenth-born	302	34.4
	3,319	26.7

Dr. Ploetz does not undertake to interpret the result of the investigation.

* * *

Registered Mail Insurance in 1913.—During the year 1913, registered mail insurance in the United States brought in premiums to the amount of $203,527, while losses reached only $14,101, or 7 per cent. The business was divided among twenty-four companies and so few got a good volume that the possibility of an underwriting profit to the majority was precluded. Only three companies wrote in excess of $10,000 in premiums and seven did less than $1,000 in premiums. Among the latter were two of the three reinsurance companies that participated in the business.

The returns show that the marine offices have been pushing the line and that the big fire agency plants of the fire and marine companies have not been educated up to getting this business. While the business is not of sufficient size to warrant the expenditure of a great deal of money in going after it, there are certain features, other than the low loss ratio, that make it desirable. It is short term business on which practically no reserve is necessary and the company knows at the end of each year just where it stands.

* * *

Group Compensation Insurance in Michigan.—Charles Van Keuren, of Lansing, district agent for the Detroit Life, says the "Indicator," of Detroit, has devised a co-operative compensation insurance plan which has now been in successful operation for about a month. The plan is to combine a number of employers of labor into a group through which they can secure a reduction in premium rate. The policy is a co-operative compensation one and under its terms the greater the number insured the less will be the amount of the minimum premium and the rate per $100 of payroll to be paid by each member. It is claimed that there are many small employers of labor in the small towns of Michigan who have not come under the Workmen's Compensation Act mainly because it has never been explained to them. Especial efforts are being made by Mr. Van Kueren to reach this class and so far with good success. Employers in the same line of business are grouped together and then for the purpose of formulating rates groups are formed according to the number of members. The first class to be rated is threshermen, and there are seven groups of these, ranging from 10 or less members to from 501 to 1,000. The rates per $100 range from $3.75 in group A to $3.25 in Group G, and the minimum premium from $50 to $25. The business is conducted mainly by mail and is really a campaign of education. The policy is copyrighted. At present its use is confined to Michigan, but Mr. Van Keuren plans to put it in operation in other States in the near future.

* * *

War Risks and Government.—Following close on the announcement made last week that the British Government would insure shipments of wheat to Great Britain in English bottoms up to 80 per cent, comes the news that the Belgian Government would also cover war risks on wheat shipped to Belgian ports. Pierre Mali, Belgian Consul at New York, received urgent cablegrams from the Minister of Foreign Affairs, at Brussels, on August 9 and 10, to the effect that the Belgian Government had decided to take this step and that war risks would be insured at ¼ per cent. It was also stated that, in the belief that the seas were now comparatively safe, the National Bank of Belgium was taking up documents on wheat.

In the United States, the National Foreign Trade Council, meeting in special session on August 10, adopted a resolution in which it was said:

"Even with legislation permitting the American registry and operation of foreign-built ships under the American flag, the movement of exports and imports will be greatly retarded because of prohibitive war risks—British Government insurance covering only British vessels and their cargoes—therefore, be it resolved, that we recommend that the Government promptly provide war-risk insurance on both the hulls and cargoes of American vessels engaged in over-sea trade at reasonable rates, and we urge upon Congress the immediate enactment of the laws necessary thereto."

The Special Committee on Shipments During the European War of the New York Chamber of Commerce issued a bulletin of information to American shippers on August 12.

According to the bulletin there is only one exception to the international rule that goods shipped by American shippers, as neutrals, to a neutral destination are exempt from capture, whether

shipped on an American or other neutral ship or on a belligerent ship. This exception is where the goods are intended to be transshipped to a hostile destination. Then a captor must prove intention to transship to justify the capture.

Contraband goods are of two classes, absolute and conditional. Absolute contraband is subject to capture even in an American bottom. Goods known as conditional contraband are not subject to capture in an American or other neutral or a belligerent bottom unless destined for the military use or benefit of a belligerent country. By way of warning, the bulletin here adds:

"As, however, the prize court of the captor has jurisdiction to determine the question of contraband, shippers should contemplate the possibility that both classes of contraband may possibly be seized and condemned."

INSURANCE NEWS IN THE WEST

Foreign Companies Scrutinized in Chicago.—Foreign companies have been receiving chief attention in Chicago during the past few days. Some of the banks and trust companies have given instructions to watch closely fire policies of foreign companies on property in which these institutions are interested as creditors, trustees or otherwise. That was only a reasonable precaution. It does not cast reflections upon admitted foreign companies. There are, however, so many policies in force issued by Lloyds and non-admitted surplus line companies, whose American assets are not a large factor, that financial institutions must be more careful than usual in scrutinizing insurance offered. The public at large also has shown an interest in the affairs of foreign companies and some of these companies of the highest standing have seen fit to take active measures to allay fears as to the possible effect of foreign wars upon them. It is reported in Chicago that some field men of American companies have been short-sighted or mean enough to attempt to create doubts as to the condition of foreign companies, hoping thereby to gain some little advantage for their own companies.

* * *

Phoenix of London Managerial Appointment.—Walter L. Maillot, of Chicago, for a number of years in the service of the New York Underwriters, has been appointed assistant Western manager of the Phoenix of London. It has been known in inside circles for two or three weeks that the Phoenix was negotiating with Mr. Maillot, but it was understood until this week that they had not got together. Assistant United States Manager Hart Darlington had stated that the company desired as assistant manager of the Western department a man who, in addition to his other duties, would take an active part in organizations of fire underwriters and make the company more of a factor in them. Mr. Maillot is such a man. Just coming into his prime, energetic, thoroughly competent, of fine presence and pleasing personality, he has taken an active part in organizations of field men with which he has been associated, and there appears no reason why he should not prove in every way a strong assistant manager and fine representative of the Phoenix.

Mr. Maillot received his early training in the home office of the New York Underwriters. Later he was in the field in Virginia, Texas, Arkansas and Oklahoma for the company. Later it made him State agent for Missouri. A few months ago, when Robert M. Bennett was transferred from Chicago to New York, Mr. Maillot was transferred to Chicago as State agent for Illinois and was also put in charge of the company's Western special hazard department. He stands high among Western field men.

* * *

Henry Evans, president of the Continental and the Fidelity-Phenix, has been in Chicago this week. He does not visit the city very often, but when he does come there usually is something important to be done. Hence the report that he is in town starts speculation as to what he is going to do, often wild speculation at that. Nothing has come out yet to show that his present visit has any special significance.

* * *

Southern Surety Changes.—Announcement was made this week of the appointment of the Smyth & Coambs Company as general agents at Chicago of the Southern Surety for all lines except industrial, health and accident. This is a corporation which recently succeeded the firm of Smyth & Coambs, composed of two young men who in the past few years have built up a considerable business as brokers. They have specialized on surety lines. In their new capacity they expect to employ a competent casualty man to handle that branch of their business. O. W. Huncke & Co., who have been general agents of the surety department of the Southern Surety, will continue as general agents of that department but will report their business through the Smyth & Coambs Company.

* * *

As was expected from the presence of Vice-President Harris in Chicago this week, the appointment of a successor to John T. Wagner as manager of the Chicago branch office of the casualty department of the Fidelity and Deposit was announced on Wednesday, in the person of H. B. Hodge. Mr. Hodge has been with the company in various capacities for seven years, serving both in the home office and in the field. He was for a time Western district manager and is therefore familiar with the company's Illinois business.

Mr. Wagner has opened a small office for the Hartford Accident and Indemnity in part of the space of the Royal Casualty. The last named company will move its home office back to St. Louis, which is its legal domicile, before the end of the month. Then the Hartford Indemnity will have the entire space it occupies in the Insurance Exchange. Mr. Wagner is now negotiating for certain agency connections. If these negotiations are successful, changes will result in the representation of one or more other companies now operating in the city.

* * *

Opposition to Proposed Accident Underwriters' Association.—Louis H. Fibel, president of the Great Eastern Casualty, has addressed a circular letter to certain of the industrial, health and accident companies urging them not to take part in the organization of the National Accident Underwriters and stating that he will give his reasons for this request at the meeting of the Detroit Conference at Atlantic City on September 9. As only one other man prominent in the Detroit Conference has expressed opposition to the organization of the new association, it does not look as if their protests would avail much. Aside from this opposition everything looks favorable for the successful launching of the National Accident Underwriters on September 10 and the peaceful dissolution of the three present organizations. Leaders in the business recognize the urgent need of certain reforms and are convinced that they can be brought about only through one strong organization. While some of them are strongly attached to their present associations, they are willing to abandon them in the interests of the business.

* * *

Surety Situation in the West.—Surety underwriters in Chicago profess to see very little effect upon their business from the European war. One, who is in a position to make observations over a large territory, states that there is apparent a slight tendency to defer action on contemplated contracts until financial conditions become

...ness outlook. Another [illegible] large, attributes this tendency to [illegible] has prevailed for several months [illegible] He does not believe the business will [illegible] of the war appreciably for several months yet [illegible] perhaps. There is an increase in fidelity losses due to the [illegible] employes who have been caught in the financial [illegible] themselves by "borrowing" from their employers.

The demand for fidelity bonds to protect the deposits of individuals and corporations, which was strong in July, has mostly died down. This demand was noticeable in Illinois more than elsewhere and resulted from the closing of the Munday Lorimer banks in Chicago, in June. The lesson apparently has been forgotten by this time. This really does not cause any regret on the part of some of the surety men. Their companies write these bonds and they are glad of the commissions on them, but they do not like them. Some conservative underwriters fear that great harm will result at a time of financial stress if some prominent surety company is obliged to decline to write such bonds on a bank on which it has assumed all the liability prudence will permit. In times of suspicion, they point out, such action by a surety company would be misconstrued by the public and give rise to rumors that the banks on which a company had full lines were in an unsound condition.

LA SALLE

Chicago, August 14, 1914.

ITEMS OF INSURANCE NEWS.

According to figures compiled by the "Journal of Commerce," one hundred and thirty-seven fire insurance companies report premiums aggregating over $9,600,000 in New York City for the first six months of 1914.

Press notices and dispatches, as collated by the bonding department of the Fidelity and Casualty indicate, for the month of June, the following defalcations in the United States: Banks and trust companies, $83,339; beneficial associations, $18,110; public service, $4,001.10; general business, $33,317; insurance companies, $8,575; miscellaneous, $50,561,61. Total, $196,904.71.

In his annual report to the Governor, W. J. Deacon, registrar of vital statistics of Kansas, recommends State life insurance, on the ground that the average death rate in Kansas is lower than in the large cities of the East, but that the rate of premium charged Kansas policyholders is based upon the general experience.

Following the reply of the South-Eastern Underwriters' Association to the city authorities and civic bodies of Birmingham, Ala., who had protested against the decision of the association to raise the fire insurance rates in Greater Birmingham 15 per cent, it is announced that arrangements will be made for a thorough investigation of the fire hazards and protective features of the city. Meanwhile, however, the recent 15 per cent increase in rates will stand.

The Equitable Life Assurance Society of New York has decided to abolish its practice of publishing lists of its death claims, as it has been discovered that these lists are used by unscrupulous promoters in finding prospects for wild-cat investment schemes.

The Southern Pacific Railroad Company has notified the New York Workmen's Commission that it will test the application of the workmen's compensation act as to the longshoremen and stevedores employed on the company's piers in New York City.

Reports to the South Carolina Insurance Department by insurance companies show, for the first six months of 1914: total number of fires, 5,415, against [illegible] for the same period in 1913; total insurance losses, $[illegible], against $1,276,574.10 for the same period in 1913.

The Second International Exposition of Safety and Sanitation will be held in New York City on December 12 to 19, 1914, under the direction of the American Museum of Safety.

The following officers were chosen by the Southern Casualty and Surety Conference at the Chattanooga convention: President A. B. Landon, Gulf Life; vice-president, P. M. Estes, Life and Casualty Co. of Tennessee; secretary and treasurer, Edwin Shelly, New Orleans Casualty. The executive committee is composed of:—Chairman, C. E. Clarke, Pelican Casualty; C. J. Cochran, United Casualty and Surety; O. P. Ott, Southern Mutual Life; R. D. Hoffaker, Interstate Life and Casualty; J. J. Wilson, Southern Surety.

Gunnar Huitfeldt, [illegible] commissioner of the World's Insurance Congress at the Panama-Pacific Exposition, recently stated at a dinner in Cincinnati that, to date, 80 per cent of the insurance interests in the United States have appointed delegates to the national council and of the 300 conventions already booked for San Francisco in 1915 one-third are insurance conventions.

The programme of the nineteenth annual convention of the National Association of Insurance Agents, to be held at Mineapolis, Minn., on August 17-18-19, is, briefly, as follows:

Monday, 11 to 12 A. M.—Address of Welcome and Response; President's Address; Address, "Agents' License and Qualification Laws," J. O. Preus, Insurance Commissioner, St. Paul, Minn.; Reports.

Tuesday, 10 A. M.—Address, "Jumbo Lines and Reinsurance Treaties," J. F. Joseph, vice-president Sterling Fire Insurance Co.; Discussion; Address, "Underwriters' Agencies," R. M. Potts, Superintendent of Insurance, Springfield, Ill.; Discussion; Introduction of Resolutions.

Tuesday (Casualty Section), 2 P. M.—Election of chairman and secretary; Organization of section; Discussion; General Business.

Wednesday, 10 A.M.—Address, "Co-operation of Insurance Interests," W. S. Diggs, president Ohio Insurance Federation; Discussion; Introduction of New Business.

Wednesday, 2 P. M.—Report of Committee on Resolutions; Discussion; Report of Committee on Nominations; Discussion; Adjournment.

The Insurance Federation of Pennsylvania has been organized, enlisting agents and policyholders in all lines of insurance for the protection of the business against adverse legislation. J. W. Henry and J. L. Rivolta, both of Pittsburgh, were elected president and secretary, respectively. Dues were placed at $2 per annum.

Insurance Commissioner Epsteen, of Colorado, has reprimanded A. N. Dempsey and revoked the license, for one month, of C. T. Austin, both agents of the Mutual Benefit Life, on the charge of the Pacific Mutual Life that these agents prepared and used literature containing false statements by implication and half truths damaging to the Pacific Mutual. This is the first result under Section 78 of the Colorado Insurance laws, recently put in effect, penalizing those guilty of circulating false literature, etc., as regards any insurance company.

Assistant Attorney-General Sagan, of Kentucky, has given his opinion that the Act of 1912 amending the Kentucky statutes providing for the organization of co-operative assessment life insurance companies is unconstitutional.

The Insurance Commissioner of Ohio has issued a warning to the property owners of that State against dealing in any way with insurance concerns not properly licensed in the Commonwealth. The notice is directed principally against inter-insurance concerns.

The Oregon Supreme Court, in W. C. Doyle vs. Portland Railway, Light and Power Co., has decided that trespassing upon railway property can no longer be considered "voluntary exposure to risk" where "a considerable number of people, in a thickly settled community, have been accustomed every day for several years to use a railroad bridge as a foot passageway, with the knowledge and acquiescence of the railroad company and its employes."

The Newark Fire Insurance Company has amended its charter, increasing its authorized capital from $500,000 to $1,000,000 and allowing the company to write all lines of automobile insurance.

The American Surety Co. announces the appointment of Secretary H. B. Zevely to be vice-president, with assignment to the Pacific Coast district, and the promotion of Auditor L. E. Carman to vice-president. Treasurer W. A. Brandt has been elected secretary-treasurer.

The Southwestern Surety Insurance Company, of Denison, Tex., has reinsured the outstanding accident and health and plate glass business of the General Bonding and Casualty Insurance Company of Dallas.

The Ohio Valley Fire and Marine of Paducah, Ky., has been licensed to do business, with a paid up capital of $51,750, and surplus of $44,409.

The Union Central Life, of Cincinnati, has secured an amendment to its charter permitting it to write personal accident and health insurance.

The stockholders of the Aegis Life, of Denver, have voted to reduce the capital stock of that company by one-half. The capital stock outstanding on January 1, 1911, was $236,360.

The New York Life announces that in view of the state of war in Europe, it has been decided to put the following clause in all policies issued to Europeans now residing in America, where there seems a possibility of these Europeans being called into active service abroad:

"During the first two years of the existence of this policy, if the insured shall die while engaged in military or naval service, or in consequence of such service, the amount payable under this policy shall be limited to the total premiums paid, without interest."

It is reported that the Norwegian Parliament has rejected the bill to secure a State monopoly of the life insurance business in Norway.. A commission was appointed to consider the question, and in the report stress was laid upon the heavy compensation which would have to paid to the companies and the insignificant benefits which would accrue to the Government were such a scheme adopted.

REVIEW OF THE FINANCIAL SITUATION

WHILE all the world seemed to be waiting for real and significant war news, in the past week events in reality did not stand still. The scope of the European conflict was enlarged by the recognition of a state of war between France and Austria and between Great Britain and Austria. Indications were also presented that some of the smaller neutral States were likely to be drawn into the contest shortly. It need not be said that this added nothing to the sum of calamity of the European Armageddon. On the contrary, it could not fail to be rather hopefully regarded. Irrespective of American sympathies, however these may lie, the more the countries that are drawn into the conflict, especially against Germany and Austria, the brighter the prospect for its early termination.

Indeed, it is becoming increasingly unthinkable that the war can long survive the first desperate encounters. Unless all signs fail, the slaughter will be so awful as to stun the European peoples and set up a reaction from the war craze which will operate powerfully in behalf of the advocates of peace. At some stage of the war, finance, which was so impotent to prevent the precipitation of war, should be able to exert a tremendous influence for its termination, and nothing is more likely to contribute support to finance than the realization of the catastrophe to humanity threatened by a continuation of the struggle after determined engagements have shown the futile ruin occasioned by it all.

Such considerations must pervade the minds of men to-day, although it is too soon to allow them to govern the formation of plans to deal with the situation which the war has created. At the moment all efforts have to be directed toward coping with the brutal fact of the war and the terrific derangement of the financial and commercial machinery, the operations of which provide the world with its living. There has been no cessation of endeavor in this respect; and as the end of the week approached it was possible to see that progress was being made in the solution of the greatest problem of most immediate pressing importance, how to contrive a resumption of international trade movements and of international financial dealings, upon which the course of domestic trade and finance in every peaceful land depends, and without which some of the belligerent nations at least cannot long maintain their belligerency.

One of the most striking features of the situation is that the allies against Germany and Austria constitute an outer ring in contact with the rest of the world. With them, therefore, there can be some sustained commercial and financial relations. It happens also that one of the allies, Great Britain, is the foremost trading and banking country on the globe and Great Britain has been taking the most resolute steps to provide for a speedy resumption of these relations. One of the chief happenings of the week was the announcement which the British Admiralty was able to make that the Western half of the Atlantic Ocean was safe for shipping; and, unless the French and British navies should be overcome by the German fleet, no long time is likely to elapse before all international waters will be pronounced open for trade, except the English Channel and the North and Baltic seas, which have been closed for the purposes of naval warfare. Obviously this means a momentous contribution to the solution of the problem stated above, for when shipping can begin to move across the oceans there must be a very rapid recovery of trade and industry, domestic and international. Even though production, distribution and consumption will be less than normal they will be in much greater volume than when they have been laid under an embargo against all international traffic.

It was not, however, the maritime outlook which constituted the principal subject of interest in the last few days. That was supplied by the measures instituted,—especially in Great Britain,—and the co-operative projects launched elsewhere, to rehabilitate the international money market. Without the restoration of those credit processes which are called foreign exchange, there cannot be any foreign trade, and domestic trade will be dammed up by the blockade of exports and imports. To no country anywhere is it of more consequence at this time than to the United States to facilitate in every possible way the international movement of goods and commodities, for this country is in a position to make huge trade exports to take the place of those which ordinarily go from Europe to various parts of the world. It is going to be vital to our future welfare when settlement for this war has to be made, to have accumulated in advance enormous credit balances as a result of our provision of supplies to the world's markets. In that way alone can we hope to meet without disaster the demands which will be made upon us after the war to furnish capital to Europe with which to repair the waste of the war. In the meantime, it is going to be essential to the welfare of our people that American industry and commerce be busily engaged in purveying to foreign markets those commodities and goods in furnishing which full occupation will be given to the American population. Domestic trade alone will not suffice to employ our resources of men and materials to anything like the extent required to avert tremendous hardship and distress.

It has been quite natural that in the past turbulent fortnight American optimism should have turned its attention to the possibilities which this war seems to hold out for taking advantage of its sinister opportunity for procuring the enhanced economic good of the United States. It does provide such an opportunity. Nevertheless we are likely to place obstacles in our own way by rushing impulsively into undertakings, seeking to devise and extemporize expedients which have nothing to commend them save that they are experiments suggested by the opportunity. It is not wisdom, or even the highest self-interest, to regard too exclusively the prize which the war offers to the United States.

There has been more than enough of wild folly in the public prints in the past few days about New York becoming the world's financial centre. Already some frenzied prophets have had visions (and proclaimed them) of bills of exchange on New York supplanting bills on London and of foreign exchange quoted everywhere in terms of dollars, instead of in pounds sterling. Now, these like other good things may be expected to come in time, if we have patience to wait and work, but just at the moment the wisest thing we can do is not to try to rush the future. Nobody can tell what the European war will bring forth, but in the present posture of affairs it ought to suffice us to rely to the utmost on the financial and commercial machinery which has stood the world in stead in the past and helped to reconstruct it after its many breakdowns, rather than to attempt to substitute machinery of our own special pattern. The British Empire has not gone to pieces yet. It still has the colossal merchant marine that carries the bulk of the world's ocean trade; and it is more than doubtful if we are going to create out of hand

an American merchant marine which will compete with the British mercantile fleet, unless Great Britain is shattered by the war.

The matter which has given most concern to American bankers and merchants in the crisis of the European war has been the quantity of our immediate indebtedness abroad, represented practically by accounts against us at London. What the British banker has been trying to do is to devise some process by which so solvent a debtor as the United States can pay debts and still keep solvent. At least two measures of the past week have shown how prudently and wisely British finance is working to that end. Great Britain is the only belligerent nation which will have a gold supply during the war. The Bank of England has arranged to accumulate reserves in South Africa and in Australia from the output of the gold mines. It has arranged to accumulate another reserve in Canada; and against these reserves it will issue its notes in London. The British Government has also guaranteed the Bank of England against loss on the discount of domestic or foreign bills of exchange, on either home or foreign banks, accepted before August 4. This of itself will go very far toward rehabilitating the London money market, which is another phrase for describing the world's money market.

There would seem to remain, then, only the necessity for a comprehension on the part of our bankers of the desirability of co-operating with the Bank of England in the most practical way possible and arranging for the transfer of such a quantity of gold to Ottawa as circumstances may dictate. Without such initial gold payments on our foreign indebtedness it is going to be difficult to bring about a resumption of foreign exchange operations here, no matter if we have available commodity exports which could create bills. Ten days or so ago it was an excellent thing to enter into an agreement, as our bankers did, to discourage gold exports. It would be a very foolish thing to refuse to export gold for such an intelligent and effective use of it as has been indicated in the Bank of England's Canadian reserve scheme.

We expect to see a moderate amount of gold go across the Canadian border from this country in the next few days and we believe that no large amount will be necessary to start the foreign exchanges working again. We do not expect to see any vicious expedients for releasing gold resorted to, such as have been implied in the recommendation of legislation for the substitution of bank notes as a part of National bank reserves.

COTTON

August 15, 1914.

ALL the cotton exchanges in the world, upon which contracts for the future delivery of American cotton are made, have remained closed during the past week, as have the world's securities exchanges. The absolute interruption of commercial intercourse between the nations of Europe by reason of the war, and the only partial intercourse between the United States and these countries, have to all intents and purposes brought the cotton trade to a standstill. Owing to the prohibitive rates of marine insurance and of exchange it is virtually impossible to export any cotton from the United States at present, although it has been reported that Japanese buyers have shown some activity in Texas, doubtless on the theory that by the time their cotton reaches the Pacific coast, the danger of capture on the voyage to Japan will have been eliminated. European merchants are not showing the slightest indication of a desire to buy actual cotton or to contract for it in the future. In such spot markets in the South as have any stock of cotton, for the first time in half a century it is being discovered that cotton may be utterly unsalable and that under such conditions it is no longer true to assert that "cotton is gold." In the absence of quotations from the cotton exchanges nobody in the South has any idea as to the market value of cotton; prices are anything that can be got from purchasers, of whom the only survivors are American spinners; quotations vary from place to place and from hour to hour in the same place. Moreover, with each succeeding day the confusion grows worse confounded, as the picking of the new crop extends, and more and more cotton accumulates in the markets of the extreme Southern sections of the Cotton Belt, where the crop moves earliest. Almost for the first time in history everybody is afraid of cotton. The merchant dares not buy it; the banker dares not lend upon it; the spinner is concerned lest, however cheaply he may purchase it, his competitors will obtain it still more cheaply a little later and will be able to undersell him in the marketing of his product. Four years ago spinners were willing to buy millions of bales of cotton for delivery to them over a period of years ahead; to-day the markets are practically devoid of any future commitments at all. Consequently, there is no support to prices from the anticipated requirements of the future, translated into the form of contracts for future delivery. Cotton is to-day exactly what some of the Congressional economists have insisted it ought to be, a commodity like hay or wool or lumber or potatoes. Like those commodities it can be sold, if a purchaser turns up; but in default of a purchaser who needs it for immediate use, it has no market value at all. For the time being it has ceased to be a world commodity with a world market, and has become, in respect of each lot of it, a local commodity with such market as accident may supply. The speculators will have nothing to do with it, and the merchants are ready to do nothing more than serve as mere intermediaries between the consumer ad the producer. This is a condition of things which the Southern critics of the "gambling" on cotton exchanges have long been proclaiming their desire to have brought about; their spokesmen in Congress have filled pages of the Congressional Record with eloquent pleas for it; and now events beyond the control either of Congress or of the cotton trade have brought it about. It will be well worth while to observe how the reality compares with the dream, in the opinion of those who have the reality to face. Within the cotton exchanges, both at home and abroad, the one effort is to liquidate outstanding engagements down to the bare bones of unescapable commitments entered into before the present situation came about. All endeavors are concentrated upon getting contracts off the books, upon disposing of all stocks of cotton at almost any sacrifice, and upon preventing any new commitments from being made. There is not to-day a cotton futures market in the world in which it would be possible to "hedge" even one hundred bales of cotton. All the vast machinery by means of which the future needs of Manchuria or of India in the way of cotton goods were made to provide a market for cotton now in the hands of merchants, but unsold, has been brought to a complete stop. Of course, the air is full of projects for replacing all this machinery and providing a market for the cotton crop, if in no other way, at the expense of the taxpayers of the country. At Washington, the colossal economic and financial ignorance of the coterie of Senators and Congressmen who have just compassed the passage of the Lever Bill through both Houses of Congress, is disporting itself in its fustian and bombast of tremendous schemes for Government valorization of cotton or for unlimited Government lending on uncontrolled warehouse receipts for cotton or even on cotton in farmers' hands, always at a very high price. More serious efforts are being made by bankers of high repute, in conjunction with exalted officers of the Government, to work out a programme for financing the season's crop and for distributing it at home and abroad as rapidly and at as high a price as possible. The one part of the community which it is generally agreed not to be worth while to call into consultation is the cotton trade itself. The experience, the resources, the credit, the accumulated knowledge of the cotton trade with regard to the possible outlet for cotton,—all these are treated as negligible, in comparison with the wisdom of statesmen, financiers, and political personages who have hitherto contributed nothing whatever to the distribution of the American cotton crop. It will be interesting to observe the financial and commercial results which these amateurish gentlemen obtain.

THE CONTRACT MARKETS

THE NEW YORK COTTON EXCHANGE.

The following were the high, low and closing bid prices for each delivery, on Friday, July 31, in cents and hundredths of a cent per pound, gross weight:

August—

CENSUS BUREAU REPORT ON CONSUMPTION AND DISTRIBUTION OF COTTON IN JULY.

On Friday, August 14, the United tSates Census Bureau issued its monthly report (the eleventh of the season of 1913-1914) on the consumption, distribution and supply of cotton in the United States for July, 1014. The figures, with comparisons for July, 1913, are given in the following tables,—round bales being counted as half bales and bales imported from foreign countries being reduced to equivalent 500-pound bales (net weight):

CONSUMPTION AND ACTIVE SPINDLES IN JULY

	Consumption		Active Spindles	
	1913, Bales.	1914, Bales.	1913, No.	1914, No.
In mills in the Cotton States	240,969	227,546	11,969,736	12,305,985
In mills in all other States	221,273	220,723	18,052,918	18,370,970
Totals for United States	462,242	*448,269	30,022,654	30,676,955

*Includes 17,237 bales of foreign cotton.

STOCKS OF COTTON AT MILLS AND IN WAREHOUSES ON JULY 31.

	In Manufacturers' Establishments		In Independent Warehouses	
	1913, Bales.	1914, Bales.	1913, Bales.	1914, Bales.
In the Cotton States	345,152	326,907	306,904	257,530
In all other States	612,409	577,507	74,835	166,686
Totals for U. S.	957,561	†904,414	381,739	‡424,216

†Includes 62,400 bales of foreign cotton.
‡Includes 9,504 bales of foreign cotton.

IMPORTS AND EXPORTS OF COTTON IN JULY.

Imports from	1913, Bales.	1914, Bales.	Exports to	1913, Bales.	1914, Bales.
Egypt	7,049	13,302	United Kingdom	39,898	53,739
Peru	906	442	Germany	40,548	41,291
China	1,303	3,338	France	7,132	2,522
All other countries	238	6,661	Italy	24,589	22,758
			All other countries	28,543	15,863
Total imports	9,496	23,743	Total exports	140,710	*136,173

*Includes 8,644 bales of linters.

In addition to cotton proper there were consumed in the United States, during July, 23,452 bales of linters (24,570 bales in July, 1913). Stocks of linters on July 31 were 83,928 bales at manufacturers' establishments (72,393 bales in July, 1913), and 33,444 bales in independent warehouses (29,148 bales in July, 1913).

The consumptio of cotton proper (including foreign cotton) in the United tSates for the ten months ended July 31, 1914, was 5,193,659 bales, compared with 5,050,971 bales for the same period in 1913.

* * *

Opportunity of American Cotton Mills During the Coming Season.—Under any consideration the spindles of Europe may be counted upon to consume at least 3,000,000 bales less than normal the coming season, says the "New York Sun," in a review and forecast of textile conditions. Such goods as may be manufactured will

be sold in the home markets, with the exception of a large part of the reduced output of Lancashire. The interesting question, therefore, is how much of this deficit in the world's supply of cotton fabrics the mills of the United States and Canada may be forced to make up. China has no large stock of goods, and the South American demand must be met.

American mills have a spindle and loom capacity to manufacture close to 7,000,000 bales, if they can find a market for their output. If cotton should be pressed for sale they probably would be willing to buy much more than their requirements. Hitherto the European spinner has been fortunate enough to buy low-priced cotton while his American competitor has held off until an advance in prices has forced him into the market. This year, however, it is hoped that the American manufacturer will seize his opportunity and not let bargains go to his European rival.

* * *

BRITISH BOARD OF TRADE OFFICIAL EXPORT FIGURES

The preliminary figures for the July exports of cotton yarns and cloths from Great Britain have been received by cable by the New York Cotton Exchange. We give them below, with the completed figures of the months since September 1, 1913:

	1913. Yarns, Pounds. Month.	Since Jan. 1.	Cloth, Yards. Month.	Since Jan. 1.
1913—September	15,734,400	154,761,700	548,972,500	5,350,278,900
1912—September	18,999,500	185,099,300	569,622,300	5,123,124,900
1913—October	19,959,100	174,720,800	630,937,100	5,981,216,300
1912—October	22,515,500	207,614,800	666,185,300	5,789,310,200
1913—November	18,247,000	192,968,400	563,650,100	6,544,866,100
1912—November	18,025,000	225,640,000	568,945,600	6,358,255,800
1913—December	17,207,100	210,175,500	530,692,300	7,075,558,400
1912—December	18,314,300	243,954,300	554,370,000	6,912,625,800
	1914.			
1914—January	19,056,000	19,056,000	688,105,100	688,105,100
1913—January	19,093,300	19,093,300	648,912,700	648,912,700
1914—February	18,074,100	37,130,100	583,451,600	1,271,556,700
1913—February	16,761,100	35,854,400	563,606,400	1,212,519,100
1914—March	19,824,300	56,954,400	590,375,000	1,861,931,700
1913—March	17,212,600	53,067,000	560,905,000	1,773,424,100
1914—April	18,992,500	75,946,900	531,908,600	2,393,840,300
1913—April	18,578,600	71,645,600	587,552,800	2,360,976,900
1914—May	20,234,300	96,181,200	572,913,100	2,966,753,400
1913—May	17,746,700	89,422,300	606,254,300	2,967,231,200
1914—June	17,233,000	113,414,200	498,504,900	3,465,258,300
1913—June	16,986,700	106,409,000	615,557,600	3,582,788,800
1914—July	20,000,000	126,419,000	629,000,000	4,094,278,300
1913—July	16,620,200	123,029,000	638,971,100	4,221,759,900

NEW YORK QUOTATIONS FOR STANDARD COTTON GOODS AND YARNS

Mexico	158	51.67	3.06	.....	158
Total all taxes	$129,778,135	246,842.01	$524.94	$3,221,894	$132,800,029

Taxes paid by switching and terminal companies are not shown per mile because of their great proportion of terminal real estate and also because report of miles of first main track of these roads is not required by the commission.

Railways of Classes I and II include respectively roads having annual operating revenues above $1,000,000 and those having annual operating revenues from $100,000 to $1,000,000. The mileage given for these two classes of roads is miles of line, that is, miles of first main track owned, including branches and spurs. Taxes have not been apportioned per mile of track because the Interstate Commerce Commission does not require reports of miles of track by States.

Class III roads are omitted, because their taxes are only about two-thirds of 1 per cent of the aggregate.

Total State and local taxes per mile of line amounting to $529.44 in 1913 show an increase over 1912 of $26.49, or 5.27 per cent, and over 1911 of $70.50, or 15.36 per cent.

A. R. MARSH, Editor

IT must have struck every thoughtful American that, since the outbreak of the general war in Europe, our own Government has been taking up in quick succession plans for providing through the agency of the Government itself for commercial and financial necessities which hitherto either have been left to purely private initiative, or else have been regarded as implying a National policy quite the contrary of what it is proposed now to do. The general explanation is, of course, that although we are not in a state of war, in the sense of being engaged in a conflict of arms with another country, we are in every other respect so involved in the complications of the war other nations are engaged in that we must proceed in a multitude of matters just as if we were actually engaged in warfare ourselves. War of any kind is a very exceptional thing, despite the not infrequent occurrence of small wars between nations living as unfriendly neighbors; and war on the scale of the present war in Europe is something that occurs only at intervals of a century or more. In the very nature of things it is impossible for all the nations of the earth to maintain over the long periods of time intervening between the major wars reserves of money and goods sufficient to enable them to meet by the mere resources of their individual citizens all the vast uncertainties and all the derangements of customary activities which are produced by these wars. During times of peace each department of industry and commerce in a given country gathers to itself by a natural process just that amount of capital and of human energy that will enable it to supply the requirements of the community, whether that community be the narrower one of the given country itself, or the wider one of the world's customers for what is produced and offered for sale. A few examples of what we mean may make this essential point clear. The capital employed in the cotton manufacturing industry in the United States is directly governed by the country's requirements for dry goods in normal times, plus such surplus as a foreign market can be found for; and the number of persons engaged in the industry is directly governed by the capital employed and indirectly by the same requirements for goods that control the supply of capital that is drawn to the industry. It is true that capital is continually being lost to the industry though the inefficiency of those attempting to employ it; but new capital in new hands continually takes the place of that lost in this manner, and the sum-total of capital and of persons employed in the industry remains always exactly what the community requires for the satisfaction of its needs. In the same way, the number of cotton merchants and the amount of capital employed in the cotton trade remain always exactly what are required for the distribution of the cotton crop, notwithstanding that numerous cotton merchants fail, dissipating their capital, while new merchants constantly join the ranks with new capital. The same is true in every other branch of business. There are at any given time just as many dealers in foreign exchange, and no more, with just as much capital as is required, and no more, as are required to handle the customary amount of foreign exchange called for by our commercial and financial transactions with foreign countries. In normal times, the operation of the law of competition alone is itself sufficient to accomplish these results. Through it the incompetent minds and the ill-used capital are being continually eliminated from every branch of industry and commerce, while the remuneration paid by the community for the service it requires is continually drawing in minds (some competent, others later to be found incompetent) and capital (some to become immediately productive, and other to be lost through unprofitable use), which will provide what is called for from this particular department of economic activity.

After long years of general peace, the adjustments of capital and of persons employed to the various departments of industry and trade become exceedingly fine and complex; and, more than this, they become international instead of merely national in their scope. In addition, as the adjustments of capital and personnel to the requirements to be met become international, the differentiation of industries and trades as between the different nations grows apace. In every country the available capital and personnel flow to those economic pursuits from which the greatest profit can be obtained in that country, and commodities which can be produced in some other country are left to that country. For example, chemical dyes can be manufactured in the United States, of equal quality in every respect with those produced in Germany; yet virtually no chemical dyes actually are produced here, as the cotton and woolen manufacturers have recently discovered to their dismay. The explanation is that capital and labor employed in dye-making in Germany are relatively more profitable than the same capital and labor can be made to be in making dyes in the United States. It is, then, economically absurd to have American capital and labor employed in the making of dyes, when the same capital and labor can be employed here in other industries which yield a larger relative return and enable us to buy German dyes at a saving to ourselves. This principle operates in a hundred ways, and is of course the reason why there is international commerce at all. The notion of a country industrially and commercially sufficient unto itself, such as the Secretary of the Interior, Mr. Franklin K. Lane,

has expounded in a pro forma interview printed elsewhere in this paper, is simply one of a nation doing for itself a multitude of things which it could more profitably leave to other countries to do.

But all this has to do with normal times, when peace reigns generally between country and country throughout the world. It is the result of purely competitive forces, grounded in human initiative, and working freely because there is little interference with them. And the longer the period of general peace, the more completely will the process just described have been carried out. The vast internexus of relations between country and country will be found to have made the very countries dependent one upon another. The closeness of the adjustment of capital and personnel, the world over, to the normal requirements of each department of trade and industry, will have made every one of those departments less able to deal independently with conditions that destroy the delicate balance between the conveniently placed supply and the easily directed demand for the product or service required. In fact, if there is too violent a rupture of the continuity of relations, more than one of the departments of industry and commerce, in more than one country, will find itself unable to survive unless it is given some help from the outside.

It is when things come to this pass that even the most independent and self reliant turn to their government for aid. It is no denial of the principle of individual responsibility, when those fully adequate to all situations that may develop in time of peace, find themselves inadequate to the situations produced by a war virtually world-wide. The foundation of modern society is the interdependence of the several parts. When one or more of the parts are deprived of their ability to fulfil their functions, all the rest must come to a standstill in their activities. This is precisely what a general war anywhere on the globe now brings about; and war is always and everywhere a national and not an individual affair. This is as much true of the nations not directly engaged in the war as of the belligerents themselves.

There is, then, nothing inconsistent with the perpetuation of the principle of a free and individually independent and responsible community, in the measures which the National Government has recently adopted, or is about to adopt, for the purpose of providing for the country as a whole the use of certain instrumentalities which private initiative is no longer in a position to supply, though the welfare of the whole community depends upon their being available.

It is clear that our financial, and hence our industrial and commercial health, depend upon our being able to ship to other countries the commodities which we produce in super-abundance, because they are the most profitable to us. We have been buying from these other countries those commodities which they can produce more efficiently and economically than we can. We have been counting upon paying them for their commodities with our own commodities and not with gold. But the war in Europe has brought [illegible] either cannot ship our commodities at all [illegible] relations ruinous to ourselves. We have virtually [illegible] ships of our own, because it has been [illegible] to use the ships of other countries and [illegible] capital, brains and labor to the production of certain [illegible] transported in those ships. Now, however, by reason of the war, we cannot have the use of the ships of other countries; nor are there private resources here available for the quick provision of ships and their operation on the terms which our laws make possible.

Here is a war situation and we are quite right in expecting the National Government to deal with it as such. In fact, the Government has already begun to do so through the act amendatory of the Panama Canal Act, which was signed by President Wilson on Tuesday of this week, under which foreign-built ships may be admitted to American registry for over-seas trade. The further legislation, not yet enacted into law but reported as earnestly approved by President Wilson, under which $25,000,000 derived from the sale of Panama bonds, will be devoted to the purchase of a fleet of ocean-going steamships, about whose neutrality there can be no doubt, as they will belong to the Government of the United States itself, is a war measure designed to relieve the involuntary embargo upon our exports of cotton, wheat, corn and manufactured articles. As a war measure this legislation will be justified even in the eyes of those to whom government ownership is anathema maranatha. It is probably true that after all is over there will be plenty of politicians who will clamorously urge that the United States should continue to operate its vast steamship system. We all remember the long train of trouble that flowed from the issue of greenbacks by reason of the emergency of our Civil War. No doubt we shall have a similar prolonged agitation for the continuance of the policy of keeping the Government in the steamship business. But the Greenbackers, with all their fervor and supposed influence over the masses, did not prevail; and we do not believe that the fate of any who strive to procure the maintenance of an ocean fleet owned and operated by the Government will have greater success.

We need speak only in passing of the steps taken by the Treasury Department to prevent the tie-up of accounts due to the war from producing a stringency of money and untoward results in the value of all kinds of property. Here the Government has been on ground familiar to the community, inasmuch as, in one or another form, Governmental help has more than once been given during our periods of panic. Here, too, the principle of the war measure comes into play, and it has not been found by experience that the community has lost in respect of its free initiative by reason of such temporary Governmental interposition.

There remains the question of Governmental aid in the marketing of the cotton crop, our great National asset for the purposes of our international financial and commercial relations. Conference upon conference has been held upon this subject with high officers of the Government,—bankers and spinners and farmers having been called into consultation, and only cotton merchants having thus far been omitted. On Monday next, a still greater conference is to be held in Washington, at which, we understand, there is to be some representation of the cotton trade, for the purpose of discussing still further what the Government can do to conserve the great asset of the country, the cotton crop of the present season. There is here one of the greatest war emergencies we have to face. Governmental help is as indispensable here as it is in the matter of the ships to transport the cotton and other of our commodities across the seas. It is profoundly to be hoped that next Monday's conference will arrive at a just conclusion as to the methods that should be adopted.

Arthur Richmond Marsh

HOW THE UNITED STATES MAY PROFIT ECONOMICALLY FROM THE WAR IN EUROPE

An Interview Given Out by Hon. Franklin K. Lane, Secretary of the Interior*

WASHINGTON, August 16.—"A direct benefit to the United States from the European war will be its effect in making the people of this country realize to a greater extent the value of its mineral resources," said Franklin K. Lane, Secretary of the Interior, in an interview to-day. "It is entirely possible to so mutilize these resources and expand our industries that the label 'Made in America' will become familiar in our own foreign markets.

"Of an importance second only to that of the food supply," said Mr. Lane, "is the supply of mineral products necessary to meet the requirements of twentieth century civilization. One of the first effects of the war has been to make us realize the interdependence of nations in the matter of food supply. Most of the countries now at war are dependent upon importation of foodstuffs, and we have cause for self-congratulation in the United States that we are able to feed ourselves. What we possibly have not so fully realized is that we are nearly as independent in the possession of essential mineral resources, and that the interference with manufacturing caused by interruption of the flow of importations of many necessary raw materials, may be overcome almost wholly by development of neglected resources in our own country."

"Do you mean," Mr. Lane was asked, "that the United States can make itself independent of the rest of the world in its manufactures?"

"Very largely," asserted the Secretary. "The main difficulties to be overcome are in the rearrangement of the distribution system necessary to establishing this independence. Business is established along certain well-marked channels, and usually follows the line of least resistance. It has been easier, and perhaps cheaper, to import mineral products and materials from other countries than to go to the trouble and expense of developing our own resources of the same nature. Forced to the latter course by suspension of commerce with other countries, I believe that American enterprise and energy will almost at once turn to the development of the native resources, rather than permit production to lag and supply to be diminished in any industry.

"For the maintenance of agriculture, for instance, we rely more and more largely upon mineral fertilizers. The three essential plant foods are potash, nitrogen and phosphorus, the latter used generally in the form of phosphates. We have depended, with the rest of the world, very largely upon the mines of Germany for our supply of potash salts, and war has cut off this supply, but we have large deposits of potash in a California reserve which can be immediately opened and developed if a bill now before Congress to make these supplies available is enacted. Chile holds a practical world monopoly of the most readily available nitrogen in its great nitrate beds, and not only the manufacture of agricultural fertilizers, but also of many kinds of high explosives, have been made dependent upon the Chilean supply of nitrates. If this supply should be cut off, a new supply would have to be found or manufactures and agriculture would suffer. Fortunately, this new supply is at hand. We can draw nitrogen from the air and fix it with lime by the use of large and cheap electrical development, as is done at Niagara Falls and in Norway, and all that is necessary to pave the way to this electrical development is the passage by Congress of the Ferris Bill now pending, which will make possible the utilization of the great unused water powers of the Western States.

"The Southern States have for years largely supplied the world with phosphates, but because of the distribution system, a large part of this supply has gone to Europe, and much of the phosphates used in the Western States have been imported across the Pacific. We have some 3,000,000 acres of phosphate lands in the West lying near the smelters from which is produced the sulphuric acid necessary to convert these phosphates into form available for plant food, and still there is no law by which these phosphate deposits can be made commercially available, although a bill which would allow of their immediate development has been favorably reported by the Public Lands Committee of the House of Representatives, and is awaiting the approval of the House and Senate."

"Will these resources be developed if these laws are passed?" the Secretary was asked.

"Of course they will," he replied. "You can depend upon American enterprise and ambition to make good when it is given an opportunity. At present these deposits and resources are locked up out of use. To open them to use when the supply from other countries is cut off means to make American industries using these materials independent of the rest of the world, and business men will not neglect the opportunity to make our industries safe from the interruptions of war we are now experiencing."

"What other industries are there now dependent upon the products of other countries, which can be made independent?" Mr. Lane was asked.

"The steel industry, for one," he replied. "Manganese is of large importance to this industry, and the largest supply of ore comes from Russia and other countries with which commerce is now paralyzed. There are large deposits in South America which have not been developed, but it is not necessary even to go so far away as that. We have great stores of manganese in this country which has been largely untouched because it is somewhat inferior in quality. To bring this home supply into use means merely adoption of methods for its purification, which are known and can be successfully used, and then we can continue making manganese steel without regard to foreign wars or sources of material. There are other international contributions, though, in the steel industry. We have depended largely upon the Island of Ceylon for the graphite used in the manufacture of the crucibles in which crucible steel for edge tools and small firearms is made. Or to take another metal, European smelters, using in part Chinese and Mexican ores, have in late years furnished much of the world's supply of antimony, which is used in the manufacture of type metal, and also medicinally. War has paralyzed the production of antimony in England (at Newcastle), and prices have gone up. Antimony, however, is easily extracted from many low grade ores which we have in great quantities in at least seven States, and there is no reason why we should not make this extraction and be independent of other countries, both as to supply and prices. Similar conditions hold in the case of arsenic.

"A large tonnage of ferromanganese alloys comes from Germany and England. It is only in the last ten years that we have freed ourselves from Sicily's monopolistic control of the sulphur supply. Flint pebbles are common and the supply large enough in the United States, but for such an apparently unimportant product as these, used in the fine grinding of cement and ores, we have been depending upon the chalk cliffs of England, Denmark and France. Ores and mineral freight depend almost wholly upon the tramp steamer, a carrier of foreign parentage. Now the tramp steamer has taken to cover, and all kinds of ocean freight, espe-

*See editorial comment on Mr. Lane's suggestions, Page 227.

cially low grade freight, will be held up and its carriage almost entirely suspended during the war."

"Will this suspension mean disaster to our industries?"

"Not disaster, but inevitable interruption to some extent," replied Mr. Lane. "It means that suddenly materials upon which great industries depend, must be obtained from other sources. Importers, consumers and manufacturers are making anxious inquiries as to where they may find in the United States supplies of crude materials to replace the foreign supplies now shut off. This is the opportunity of the United States to free itself from dependence of its industries upon other countries, and business men are awakening to this fact. They look to the Government for aid in finding new sources of material with which to keep the factories open and in operation. When they have found the domestic supply and begin its use, they will not return to dependence upon the foreign supply, and thereafter good or bad times in the United States, so far as the maintenance of industries is concerned, will be more independent of foreign complications."

"What is the Government doing to aid industry in these matters?"

"All it can do under present laws," replied the Secretary. "The Nation's greatest natural resources are a part of the public domain, and under the charge of the Interior Department. The annual reports on the mineral resources of the United States published by the United States Geological Survey for the last thirty years, contain not only statistics of yearly production of all commercial minerals, but also useful facts regarding the occurrence, exploitation and application in the arts and sciences of the mineral wealth of the country. The Geological Survey has been instructed to furnish upon request the addresses of producers from whom buyers can supply their wants if the mineral is produced at all in this country or information regarding the localities where reported deposits are undeveloped. In some instances large deposits remain undeveloped simply because of the fact that distance from market has given to the foreign sources of raw material with the lower ocean freights an advantage over domestic producers shipping by rail."

"What immediate effects upon mineral industries may be expected from the war?" Mr. Lane was asked.

"Already the copper industry has felt the injurious effect of war," he said, "and production has been curtailed. While considerable copper is consumed in the munitions of war, the constructive arts of peace furnish a far better world market for American copper than will the destructive art of war. In the case of zinc, however, the effect of the European war is the opposite. The smelting centres of the Continent are in the zone of fighting. In Belgium for instance practically all the zinc smelters lie along the line of attack chosen by the German armies, while in Rhenish Prussia, Austria-Hungary, and Russian Poland the smelters are likewise located where military operations promise to be most active. It is within the limits of probability to expect a loss of a half million tons in the foreign production of zinc or nearly half the world's output, with beneficial effect upon the recent over-production in the United States, especially as affording the opportunity to export zinc and galvanized iron products to South American countries, which market has hitherto been only in part utilized by our exporters.

"Fuel oil has a large use in naval warfare of to-day, yet the tying up of the big tank steamers on both the Atlantic and Pacific seaports is already embarrassing the oil producers of this country who depend so largely upon the export trade in all the forms of petroleum, crude and refined. On the other hand, Russia, our strongest rival in oil production, must suffer more complete and longer continued interruption of exports, which should tend to enlarge the market for our oil."

"The supply of cheap foreign barytes has prevented the development of many good deposits of that mineral, but with the consumers on the Atlantic seaboard already looking for domestic supplies, some of the Southern mines should be reopened to supplement the outputs of those already in operation."

"The closure of the European market leaves but one buyer for the radium ores of Colorado and Utah, which is decidedly to the disadvantage of the miner. Had the legislation introduced in Congress been promptly enacted the United States Government would probably have been buying these ores at this time."

"While the United States leads in coal mines," continued the Secretary, "the six European nations now at war happen to be the next largest coal mining countries, producing together over half the world's coal. Interference with both the mining and the commerce of these nations must necessarily increase the demand for our coal at least in the neutral countries of the world. And coal is our one resource about which there need be no present anxiety. The United States is now producing 40 per cent of the world's supply of coal, and the reserves yet to be drawn upon exceed, so far as known, those of all the rest of the world combined. It is not generally known, however, to what an extent we have been depending upon Europe, principally Germany, for many of the chemical products derived from coal, and which we have been permitting to go to waste, in the most reckless manner. Coal tar obtained in the manufacture of coal gas, and of coke (in retort ovens) is capable of producing hundreds of chemical products, but the chemical industries dependent upon coal tar as a raw material have had little development in the United States. Our imports of coal tar products in 1913 were valued at $11,000,000 at initiating points and when they reached the ultimate consumer probably cost double that amount. If the present war continues any length of time the American consumer will have to do without aniline colors and dyes, certain drugs and numerous other coal tar products or the American manufacturers will undertake to supply these essential commodities which have hitherto carried the label 'Made in Germany.'"

"The Panama Canal is opened in time to help us in many ways. Bolivia, for instance, is one of the greatest tin producing countries in the world, but its heaviest exportations have been to Europe, and the United States has been getting its supply of materials for the manufacture of tin plate and tin alloys from London and Liverpool. With the suspension of European industry and the opening of the canal, there is no good reason why we should not now step in, bring Bolivia's tin ore to this country and manufacture it."

"Would this change of supply mean higher prices in this country?"

"Not necessarily," replied Mr. Lane. "During the period of transition from one supply to another, and the initial development of new sources of material, cost of production might possibly be slightly enhanced, but with a new production and distribution system, wholly domestic, once established, there is no reason why prices should be higher, and no reason why fluctuations in prices in other countries should so affect our industries or prices of our products to home consumers."

THE EXTENT OF THE GOVERNMENT OWNERSHIP OF RAILWAYS

[From the "Railway Age Gazette"]

"ARCHIV FÜR EISENBAHNWESEN," the official publication of the Prussian Ministry of Public Works, has again issued its compilation of the railway mileage statistics of the world, showing the mileage of railways owned by gov-

ernments and by private companies for the years 1911 and 1912. The previous compilation was issued in 1912, and the figures were published in the "Railway Age Gazette" for July 19, of that year, page 85. Railways owned by governments are listed as State railways, whether they are actually operated by the government or by private companies. The figures for 1912 are as follows, with the kilometers converted into miles:

EUROPE.

Country.	Private. Railways.	State. Railways.	Total.
Germany	2,750	36,200	38,950
Austria-Hungary	5,400	23,000	28,400
Great Britain	23,400	.....	23,400
France	25,660	5,540	31,200
Russia (in Europe)	14,200	24,400	38,600

SUMMARY.

	Private Railways.		State Railways.		Total	
	1910.	1912.	1910.	1912.	1910.	1912.
Europe	99,497	98,952	107,490	113,699	206,987	212,651
America	314,187	321,406	12,170	22,237	326,357	343,643
Asia	26,537	22,694	36,651	43,840	63,188	66,534
Africa	9,204	10,656	13,646	15,835	22,850	26,491
Australasia	1,234	2,708	17,995	18,970	19,229	21,678
Total miles	450,659	456,416	187,952	214,581	638,611	670,997

It will be seen that of the total mileage of the world for 1912—670,997 miles—private companies owned 456,416 miles, or 68 per cent, and governments owned 214,581 miles, or 32 per cent. In 1911 the total mileage was 654,435, of which companies owned 456,881, or 69.8 per cent, and governments 197,554, or 31.2 per cent. In 1910 the total mileage was 638,611, and the private companies owned 450,659, or 70.57 per cent, while governments owned 187,952, or 29.43 per cent. As compared with the 1910 figures there was an increase in the total railway mileage of the world of 32,386 miles, while the increase of government owned mileage was 26,629, and the increase of privately owned mileage was 5,757. As a matter of fact, however, there has not been as much change in the proportion of private to State railway ownership in that period as these figures seem to indicate.

It will be noted that 7,860 miles of railway in Mexico are included under State railways, whereas in 1911 and 1910 this mileage was credited to companies. A majority of the stock of the National Railways of Mexico is owned by the Mexican Government and has been since before the 1910 compilation was made. The transfer of nearly 8,000 miles of lines in Mexico from the private to the State column would have made the percentage of privately owned railway in 1910 69.2 per cent, instead of 70.57, and in 1911, 68.4 per cent.

"Archiv für Eisenbahnwesen" states that although most of its figures are derived from the official source where they were available it has been obliged to depend in part on unofficial figures, and that its compilation makes no pretense of absolute accuracy, but is only intended to show the approximate proportion of State and private railways.

The greatest increase in government-owned mileage is shown in the figures for America, where the total of State lines was increased by 10,067, mainly by the transfer of the Mexican mileage, but also by 359 miles in Central America, 110 in Colombia, and 68 in Venezuela, where there was none in 1910, a slight increase in the Greater Antilles, and an increase of 208 in Peru, 300 in Chile and 969 in Brazil. America also shows an increase of 7,219 miles in company mileage, principally in the United States and Canada, which is far greater than the actual increase of State railway mileage since 1910.

In Europe the government mileage increased 6,209 miles, principally by extensions of the existing government systems in Ger-

many, Austria-Hungary, Russia, Italy, Norway and Bulgaria, and by absorptions of private lines. The private mileage in Europe decreased 545 miles.

Asia shows an increase of 7,189 miles of government-owned mileage, and a reduction in private mileage of 3,843 miles. The principal change was in British India, where the State mileage increased from 24,406 to 29,300, while the privately-owned lines decreased from 7,615 to 4,100.

In Africa government-owned mileage increased 2,189 miles, while the private mileage increased 1,452, 1,800 miles of new State-owned line having been added in Algeria and Tunis, while the private mileage in those countries decreased from 3,127 to 2,160. The Rhodesian mileage of 2,350 miles, however, has been transferred to the company-owned column. In the compilation for 1910 it was erroneously included in the State mileage.

In Australasia State mileage increased 975 miles, while the company mileage shows an increase of 1,474.

The total increase of State mileage, as previously stated, is 26,629, while the increase in private mileage in America, Africa and Australasia totals 10,145. This is partly offset by the decrease of 4,388 miles in Europe and Asia. While measured by length of line private ownership is still overwhelmingly the railway policy of the world, the bulk of the privately-owned mileage is in the United States, the length of line in this country in 1912 being reported as 249,789 miles, which is 35,208 more than the aggregate length of all the State-owned railways in the world. Outside of the United States the mileage owned by companies is 206,627, or 7,954 miles less than the government-owned mileage.

As the "Railway Age Gazette" pointed out in connection with the 1910 figures, it cannot be said that even in point of mileage government ownership has become the policy of most of the leading countries of the world. All of the railways in the United States, Great Britain, Spain and China are in the hands of private companies, and most of those in Canada; in France three-fourths of the mileage is privately owned, and in Sweden nearly two-thirds; in Brazil and Argentina company mileage is greatly predominant. It is noteworthy that in North and South America there is only one country, Peru, in which there is more government than private mileage. On the other hand, in Germany, Austria-Hungary, Russia and Italy government ownership is the dominant policy, Japan is committed to State ownership, and in India the State-owned mileage greatly predominates. In India, however, the bulk of the State-owned mileage is leased to, and operated by, private companies, and in Mexico all of the lines are operated by companies.

There are twenty-six countries in the list given by "Archiv für Eisenbahnwesen," where there is no State-owned mileage and only five where there are no privately-owned railways, while the privately-owned mileage is greater in thirty-nine countries as against thirty-six where government ownership predominates.

WHAT IS MEANT BY A MORATORIUM

VERY few persons in the United States really understand what is meant by the word "moratorium," or legal period of delay in the payment of some or all forms of indebtedness, as that word is used and as the principle expressed by it has in recent weeks been put into effect by most of the European countries engaged in the great war that now plagues all mankind. There has never been a National moratorium in the United States, for the Constitutional reason that, except in bankruptcy proceedings and in connection with transactions between citizens of different States, the collection of debts is a matter exclusively reserved to the States. To obtain a real moratorium in this country, therefore, it would be necessary for all the States, as well as for the Federal Government, to take concurrent action,—a practical impossibility. This is not to say that we have not had the moratorium in a disguised form more than once in the United States. Thus it was really a moratorium, so far as the Federal Government was concerned, when during the Civil War nearly $1,000,000,000 of greenbacks were issued, and used, instead of gold or secured currency, for the purchase of supplies needed by the Northern armies. A much more common form of moratorium among us, however, is that which develops whenever we have a commercial and financial crisis of the first order, such as the panic of 1893, that of 1907 and the present extreme disturbance of our financial and commercial situation resulting from the European war. Such a moratorium as this comes about because the banks are compelled in large part to desist from the legal collection of their loans, knowing that the sale of their collaterals on a demoralized market would ruin not only their borrowers, but themselves; because business concerns dare not insist generally upon the payment of the indebtedness of their customers, knowing that the losses involved would bring general ruin; and because it is recognized throughout the business part of the community that somehow industry and commerce must be kept moving, even though there is required a relaxation of the usual severe principles of credit. Thus it is that with our securities markets all closed and with most of our great commodity markets in the same position, there is an undeclared yet none the less real moratorium in the United States at the present moment.

It is well worth while, however, for Americans to get a clear understanding of what a legalized moratorium declared by Government itself, as in the countries of Europe, actually is and what matters it covers, as well as what its limitations are. It goes almost without saying that there is much divergence between country and country in Europe with regard to the precise legal application of the legalized moratorium. The Continental countries differ considerably among themselves, and they all differ still more widely from England. The customary methods of conducting business, in respect of the liquidation of indebtedness, have always to be taken into consideration, and the moratorium adapted to them as each particular case may require. As England, however, is closest to us, both as regards its law and as regards its business and financial habits and practices, it will be well here to describe briefly the now partial but potentially complete moratorium in force in Great Britain.

On August 2, the British Government, through Mr. Lloyd George, introduced in the House of Commons a postponement of payments act, which was immediately read twice and passed without discussion. The same day the act was submitted to the House of Lords, which body immediately adopted it without debate. The royal assent was immediately given and the act became a statute of the realm. It is unnecessary to give here the full text of the statute; but, by its terms, it is to remain in effect for a period of six months from the date of its passage. Under it, the Government is empowered to postpone by Royal Proclamation the payment of such debts and for such periods of time as may be thought necessary. The first proclamation under the act was in fact issued on August 2, and reads as follows:

BY THE KING.
A PROCLAMATION
FOR POSTPONING THE PAYMENT OF CERTAIN BILLS OF EXCHANGE.

GEORGE R. I.: Whereas, In view of the critical situation in Europe and the financial difficulties caused thereby, it is expedient

that the payment of certain bills of exchange should be postponed as appears in this Proclamation:

Now, Therefore, We have thought fit, by and with the advice of Our Privy Council, to issue this Our Royal Proclamation, and we do hereby proclaim, direct, and ordain as follows:

If on the presentation for payment of a bill of exchange, other than a check or bill on demand, which has been accepted before the beginning of the fourth day of August, nineteen hundred and fourteen, the acceptor re-accepts the bill by a declaration on the face of the bill in the form set out hereunder, that bill shall, for all purposes, including the liability of any drawer or endorser or any other party thereto, be deemed to be due and be payable on a date one calendar month after the date of its original maturity, instead of on the date of its original maturity, and to be a bill for the original amount thereof increased by the amount of interest thereon calculated from the date of re-acceptance to the new date of payment at the Bank of England rate current on the date of the re-acceptance of the bill.

FORM OF RE-ACCEPTANCE.

Re-accepted under proclamation for £ (insert increased sum).

Signature.....

Date.....

Given at Our Court at Buckingham Palace, this second day of August, in the year of our Lord one thousand nine hundred and fourteen, and in the Fifth year of our Reign.

GOD SAVE THE KING.

On August 6, a second proclamation was issued, under which all payment due before September 4, 1914, under a check or demand bill drawn before August 4, or any negotiable instrument (except a bill of exchange dated before August 4) are to be deemed payable one month after the original due date or on September 4, 1914, whichever date is the *later;* but if payment is demanded and refused, the amount due is to bear interest either from August 4 or from the original due date, at the Bank Rate of Aug. 7. Certain debts, however, are excepted from this proclamation, i. e., wages amounting to less than £5 per week; rates and taxes; maritime freight, debts due from persons resident outside the British Isles, or from firms and corporations having a place of business outside the British Isles; dividends on trustees' securities; bank notes; Government payments; withdrawals of savings bank deposits from the Post Office Savings Bank; and payments under the National Insurance Act and the Workmen's Compensation Act.

The effect of the two proclamations is that virtually all debts due from residents of Great Britain to each other and from residents of Great Britain to residents of other countries, like the United States, (including under the term "residents" both firms and corporations) are unenforceable in Great Britain before September 4, 1914, at the earliest; although debts due from residents of the United States (or other countries) to residents of Great Britain remain payable on their actual due dates. Moreover, the Act of Parliament gives the British Government authority to extend still further by subsequent proclamations the period of the moratorium. Interest, however, upon the amounts due may be collected for the period of the postponement of the payment. It may be mentioned in closing that the advantage of such a legalized moratorium as this over the disguised moratorium now existing in the United States is that everybody gets the benefit of it; while there is only too much reason for thinking that gross discriminations exist in this country in the treatment of debtors by creditors. With us, the large borrowers of our banks fare much better than the small borrowers; the large customers of commercial houses better than the small customers; and, in general, the borrower and debtors in favor with their creditors better than the debtors without personal influence.

INDUSTRY, COMMERCE AND FINANCE

Condition and Expectancy of the Chief Crops in the United States, August 1, 1914.—The Crop Reporting Board (Bureau of Crop Estimates), of the United States Department of Agriculture, issued on August 7 its estimate of the condition and expectancy of yield, as of August 1, of the chief crops of the United States, except that the condition of cotton is given as of July 25. The following tables give first the condition and then the expected production:

ACREAGE AND CONDITION OF CROPS ON AUGUST 1, 1914.

	Acreage, 1914		Condition			
Crop.	Pct. of 1913.	Acres.	Aug. 1, 1914.	Aug. 1, 1913.	Aug. 1, Ten-yr. av.	July 1, 1914.
Winter wheat	111.6	35,387,000	...	...	...	94.1
Spring wheat	97.3	17,990,000	75.5	74.1	80.1	92.1
All wheat	106.4	53,377,000	...	...	...	93.4
Corn	99.3	105,067,000	74.8	75.8	81.9	85.8
Oats	100.0	38,383,000	79.4	73.8	80.9	84.5
Barley	100.4	7,528,000	85.3	74.9	82.1	92.6
Rye	99.1	2,533,000	...	...	...	92.9
Buckwheat	98.9	796,000	88.8	85.5	89.1	...
White potatoes	101.1	3,708,000	79.0	78.0	83.1	83.6
Sweet potatoes	94.9	593,000	75.5	85.8	86.5	77.1
Tobacco	94.6	1,151,000	66.5	78.3	81.5	66.0
Flax	84.1	1,927,000	82.1	77.4	82.6	90.5
Rice	85.2	704,800	87.6	88.7	88.4	86.5
Hay (tame)	98.9	48,400,000	86.7	81.8	†83.9	80.8
Cotton*	98.7	36,960,000	76.4	79.6	80.0	79.6
Apples	...	.....	61.5	52.2	54.3	64.2

*Condition relates to 25th of preceding month. †Six-year average.

The acreage of above crops (excluding apples) total 301,128,000 acres, compared with 300,303,000 in 1913, and 294,692,000 in 1912.

The crop expectancy, or indicated yield, this year derived from the condition of the several crops on August 1, 1914, with final yields for previous years, is shown in the following table:

INDICATED YIELD OF CROPS, BASED ON CONDITION AT AUGUST 1, 1914.

	Yield, Per Acre.		Total Production in Millions of Bushels			
			†1914			
Crop.	†1914. Bus.	1909-13 Av'ge. Bus.	Aug. Forecast.	July Forecast.	1913. Final.	1909-13 Av'ge. Final.
Winter wheat	*19.1	15.6	*675	653	523	441
Spring wheat	13.1	13.3	236	274	240	245
All wheat	17.1	14.7	911	927	763	686

Hay (tame), tons	1.44	1.34	69	...	64	66

†Interpreted from condition reports. *Preliminary estimate.

* * *

New Railway Capital and Its Earnings in America and in Europe.—The Bureau of Railway News and Statistics has recently issued a bulletin on railway earnings on new capital invested in America and abroad. It is as follows:

"Although railroads of the United States added a far smaller amount to capital per mile between 1910 and 1912 than any of the three principal railroad countries of Europe, so great was the burden of increased expenses on revenues that they totally failed to keep abreast of the foreign systems in return on the investment. This is in spite of the fact that our own railways

made by far the largest increase, both actual and relative, in operated mileage.

"In the two years ended with 1912, for which comparisons for all four countries are now possible, United States railways added 3.7 per cent to mileage on an addition of 5.2 per cent to capital. In contrast with this showing, Germany's government roads added 6.4 per cent to capital to make an addition of only 2.5 per cent to mileage, while France, to expand by but 0.9 per cent in mileage, added 4.5 per cent to capital, and England, adding only 0.4 per cent to mileage, expanded capital 1.5 per cent.

"The effect of this economical outlay of new capital on American roads is shown partly in the per mile comparisons. United States railways in 1912 were capitalized only 1.4 per cent higher per mile than in 1910, while German roads were 3.9 per cent higher and French railways were 3.4 per cent higher. Though English roads show a smaller relative increase per mile than our own, this is because their capital per mile already is so excessively high, their 1.1 per cent representing more than three times our own 1.4 per cent in actual figures.

"It is in the absolute increase of capital per mile, however, that the moderation of American capitalization becomes most apparent, for while the United States in the two years was adding a paltry $878 per mile, England was adding $2,784, Germany $4,245 and France almost $4,500 per mile.

"Yet with all the advantage of moderate capitalization United States railways were so pressed between the millstones of sluggish revenue and rising expenses (spending 8.2 per cent more to do 3.3 per cent more business) that the ratio of net income to investment was 10.8 per cent smaller in 1912 than in 1910 (while with taxes included the loss is 12.5 per cent). Germany, despite its excessive capital expenditure aided by gigantic increases in traffic, and rates rigidly maintained in the face of public demands for reductions, displayed a ratio of income to capital 10.3 per cent larger in 1912 than in 1910. England's ratio fell 1.1 per cent, while that for France declined 3.7 per cent."

Formal Opening of the Panama Canal to Shipping.—On Saturday, August 15, 1914, the formal opening of the Panama Canal to ocean-going shipping took place. The steamship "Ancon," belonging to the War Department of the United States, made the first official passage from the Atlantic to the Pacific. The time required for the ship's passage from ocean to ocean was nine hours. For passing through the Gatun locks the time taken was seventy minutes, the shortest yet made by any large vessel. The other locks were passed with equal speed; and all the lock machinery was found to work easily and rapidly. From now on, vessels drawing not more than thirty feet of water may traverse the canal, whether they be commercial vessels or ships of war. In the latter case, strict rules for the observance of the perpetual neutrality provided in the Hay-Pauncefote Treaty with England, are laid down; and should any war ship of a country at war with another country pass through, she may not take coal, refit, revictual, load or unload arms and ammunition, or embark or disembark troops in the Canal Zone, or in the terminal waters at either end of the canal to a distance of three miles from land. The enforcement of these rules lies with the Government of the United States.

July Failures in the United States.—There was a considerable increase in the number of failures in the United States during July, as reported to R. G. Dun & Co., but the total liabilities were about the same as in 1913, although being larger than in other years. Thus, 1,411 concerns were forced to suspend last month, and the amount involved by these was $20,377,148, against 1,169 defaults for $20,325,705 a year ago, 1,230 for $16,098,460 in 1912, and 1,127 for only $12,150,070 in 1911. In 1910, 1,147 firms failed, owing $13,790,753. Of the 1,411 insolvencies in July, 29 were for $100,000 or more, aggregating in all $8,589,014, so that the average of the 1,382 smaller reverses was $8,530, as compared with $7,875 in the previous year. The returns for July of this year do not include the liabilities of the four suspensions in the financial district of New York resulting from the war in Europe, since no figures were available at the time the statement was prepared.

In the following table comparison is made of the number of commercial failures in the United States for July of the last three years, by leading classes of trade, and the liabilities reported in each class for July this year:

	Number			Liabilities.
Manufactures.	1914.	1913.	1912.	1914.
Iron and foundries	16	7	9	$1,787,302
Machinery, etc.	19	20	14	404,703
Woollens, etc.	8	2	6	265,801
Cotton and lace	2	2	3	5,704
Lumber, etc.	50	36	35	3,177,190
Clothing and millinery	59	44	55	718,900
Hats and gloves	11	6	7	119,001
Chemical and drugs	6	1	1	38,104

Immigration Into United States in June and During 1913-1914.—The monthly bulletin of the Bureau of Immigration, the number of aliens admitted to the United States in June showed a severe falling off, both as compared with May this year and as compared with June, 1913. The number admitted in June this year was 71,728, against 107,796 in May this year and 176,261 in June, 1913. The following table shows the immigration into the United States, by months, for the governmental year ended June 30, with comparisons for the three preceding years:

	1914.	1913.	1912.	1911.
June	71,728	176,261	92,425	71,019
May	107,796	137,262	113,635	95,361
April	119,885	136,271	99,839	98,036
March	92,621	96,859	91,185	81,687
February	46,873	59,156	45,380	42,826
January	44,708	46,441	38,453	36,361
	1913.	1912.	1911.	1910.
December	95,387	76,315	61,626	59,841
November	104,671	94,739	61,765	74,353
October	134,140	108,300	69,418	83,805
September	136,347	105,611	62,599	83,938
August	126,180	82,377	50,110	78,574
July	138,244	78,101	57,737	73,153
Total for governmental year.	1,218,180	1,197,532	844,172	863,953

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

ACCORDING to press dispatches from Washington, on Thursday of this week the Administration bill for the provision of war-risk insurance upon vessels of American registry and their cargoes, during the continuance of the war in Europe, was favorably reported to both the Senate and the House, and is in a fair way to be enacted into law immediately. The final text of the measure (printed on another page) came to hand too late to be properly analyzed from an insurance point of view. It appears, however, from Section 7 of the bill that the amount of money to be appropriated for the purpose of this war-risk insurance is $5,000,000, and it is expected that the reasonable premiums to be collected will be quite enough to cover the cost of the insurance, so that in the end the National Treasury will suffer no loss whatever from the venture. The bill differs most advantageously from that introduced into the House by Mr. Lewis, of Maryland, on August 12 (H. R. 18370), in that it is on its face an emergency measure pure and simple, intended to remain on the statute books only so long as the European war lasts, and, perhaps even more important, in that it provides only for war-risk insurance, while the Lewis bill undertakes to establish a permanent governmental Bureau of Marine Insurance, which should "make provision for the insurance of vessels and cargoes against loss and damage through the perils of the sea, or by the risks of war, and all such risks as are incident to navigation and which have been insurable according to the customs of commerce." In short, the Lewis bill meant launching the Federal Government once and for all into the business of marine insurance, in time of peace as well as of war, in competition in time of peace with all the private agencies of marine insurance. It attempted a plain beginning, not merely of State insurance, but of National insurance. The Administration bill, on the other hand, has been best described by Mr. Underwood, the Democratic leader of the House, in what he said before the House Committee on Interstate and Foreign Commerce. The gist of his remarks to the Committee was: "There is no desire to perpetuate this war-risk insurance. It is purely an emergency measure. I do not believe it will cost the Government a dollar, premiums more than meeting charges for losses. The immediate need of this legislation is this. We owe European countries a great deal of money. We don't want to send our gold over to pay these debts. This insurance plan will let us send our wheat, corn and cotton to pay our balances abroad. The risk is slight. I think conditions will require us to keep this bill on the statute books only a short time."

There are some who assert that no matter what the excuse, it is State socialism, and nothing else, for the National Government to undertake the business of marine insurance in any form or at any time. As well accept at once, say these critics, the idea of a State monopoly of insurance, such as Italy has established for life insurance, if this perilous step be taken away from the conception of insurance as something that can be most efficiently conducted by private instrumentalities and hence ought to be left entirely to them. But this objection perhaps arises quite as much from a general suspicion and apprehension with regard to the advance of the idea of State insurance, as from any determinate and demonstrable reason why it would not at this particular time and under these extraordinary circumstances be of advantage to the entire country to have the blockade upon our foreign commerce occasioned by the tremendous rates which private marine underwriters feel obliged to charge for the war-risk, lifted, and the flow of that commerce once more made free. The serious harm to every man, woman and child in the United States occasioned by the conditions set forth by Mr. Underwood must be apparent to everybody. And it is no commitment of the country to a new doctrine of economic and social conduct of its affairs, if the Government intervenes to avert or at any rate mitigate the harm. It is generally recognized that a state of war compels numerous activities of government which are both unnecessary and undesired by the community in time of peace. And at the present moment the United States are, if not in a military sense, at least in an economic sense in a state of war. The reflex effects upon us of war among the nations to which we are most closely bound by financial and commercial relations are little different from the direct effects which would be occasioned for us, if we were actually at war ourselves.

The truth is that no department of our economic and financial activities can afford to provide itself with and to carry along for long periods of years, capital enough to meet the exigencies of war, particularly of war on so monstrous a scale that it is impossible more than once in a century. The capital in any department of business must be adapted to the normal requirements of that business in times of normal peace and commercial intercourse. It cannot be expected of the marine insurance business in private hands that it shall maintain a supply of capital sufficient to enable it off-hand to increase the risks it is underwriting five-fold or ten-fold. The corollary of this is that when events beyond anybody's control do increase the marine risk in its totality to several times its normal amount, the regular marine underwriters must speedily come to the end of their resources. Yet the function performed by marine underwriters is absolutely indispensable to the foreign commerce of every country, whether belligerent or at peace. It is, therefore, a practical and not a political or social question, what should be done to bring up the supply of marine insurance to the requirements of commerce in such a case of major emergency as we are now going through. It is hard to find any other recourse except the Government, with its power, through taxation if necessary, to compel all the citizens of the country who are affected by a stoppage of the country's foreign commerce,—and this means really all the citizens,—to step into the breach and carry the risk, until normal times return and the normal capital of marine underwriters is again sufficient for the needs of that commerce. This, it would appear, is what is proposed in the emergency marine insurance bill, now on the point of enactment into law. The necessity for its passage is so obvious that it is hardly possible to conceive of effective opposition to it.

STATE INSURANCE—ITS MESSAGE TO FRATERNAL ORGANIZATIONS

By S. H. Wolfe, Consulting Actuary*

IF one of us suffering from a headache should consult a physician, would we be content if the doctor confined his examination to the condition of the brain? Would we not be very apt to class him as an incompetent if he did not attempt to find whether the pain was due to an eye strain or to some derangement of the digestive functions or to any of the other causes which might possibly account for the headache?

Now to-day we all must admit that the insurance community is suffering from some trouble and we would be as short-sighted as the physician just referred to if we confined our inquiry to an investigation of the insurance field in our attempt to determine the cause. As an actual fact insurance organizations generally are simply experiencing a sympathetic reflex, a movement which is harmonious with the development of the general social body.

Somebody has compared this movement to a tidal wave which, starting at the Atlantic Coast a few years ago, has swept westward across the country and is doubling back on us from the Pacific Coast. This well describes the course of the various activities in the different State Legislatures, which typifies the awakening of the new consciousness of the people, which represents the changing of an extensive development to an intensive one, and which may be summed up as the attempt to give expression to the belief that the future development of our people must be along more unselfish lines than we have followed in the past. It is interesting to listen to so hardheaded a business man as Colonel Timothy S. Williams, President of the Brooklyn Rapid Transit Company, who, in trying to determine the reason for hard times, says:

"We business men must not deceive ourselves with the repeated assurance to ourselves and to the public that we are the innocent victims of radicalism. When we look for the cause of radicalism we find it in our own misdeeds and lower ethical standards. And in making this admission I do not single out the men of large affairs in industry, trade or finance—nor the managers or manipulators of railroads and other public utilities—but I have in mind as well the small merchant and trader, the small money lender, even the daily wage-earner; and organizations of labor as well as of capital."

In this advance we in this country do not stand alone. In Germany, in England and in practically every European country this conscience was awakened long before our sleep was disturbed; we have been far behind them in the adjustment of the social relationships and in none have we been more tardy than in the realm of insurance of the various kinds, for after all insurance is one of the most potent factors in social development.

Is it wise for any one of us to assume that he can stem this tide and interpose a barrier to what would seem to be a worldwide movement based upon well defined political and social doctrines? It seems to me that the action of such an ill advised individual would simply amount to a repetition of the futile efforts of King Canut, who unsuccessfully ordered the incoming tide to recede from his chair and was thus brought face to face with the stern truth that the forces of nature pay no heed to the orders or wishes of an individual.

This changed condition has manifested itself in many ways, but the growing tendency of the State to transact the business of insurance is one of the most far reaching and important. This participation in what has heretofore been "private business" has taken numerous forms and it may not be uninteresting to trace the origin and development of the idea.

The close connection which State insurance has with political ideas is well illustrated by the history of the movement in Germany. In 1871, when the new German Empire was formed, the Socialist party was a negligible factor and in the first Diet which met that year there were but two members of that political faith; we find, however, that the new cult made rapid strides, that in 1874 the number had increased to seven and in 1877 to twelve. With the object of checking the advance of this idea, the far-seeing Bismarck introduced repressive legislation in the Reichstag, but without success. Nothing daunted by his failure to accomplish his purpose the Iron Chancellor reintroduced his measures, but again met defeat, and it is difficult to predict what the result of this disagreement might have been had not a fanatic, in 1878, attempted to assassinate the Emperor, William the First. Within a few months, the attempt was repeated, and using this as an argument, Bismarck went before the people and asked to have a new Diet elected which would be more sympathetic with his views and wishes. The German people acceded to this request and repressive legislation followed, but it was accompanied by the promise of social reforms which would be of assistance to the people. It was not, however, until 1884 that the Reichstag and Bismarck could harmonize their views and the first accident insurance bill was passed, to become effective in the latter part of 1885. The bill which was then passed was but the forerunner of ones which extended the scope and increased the benefits which were conferred. An idea like this, however, so closely associated with the welfare of the people, could not be confined by geographical boundaries. The plan spread from country to country, varying, of course, with the temperamental differences of the various nationalities and being modified by the differing political conditions.

It took a long time for the basic idea to bridge the three thousand miles which separate this country from Europe. We were a young nation and our great tracts of unpopulated acres permitted us to indulge in a wasteful system of extensive development both agriculturally and socially. Gradually, however, we have been brought face to face with the idea that there are certain things in this world which must be exercised for the benefit of society and not for the selfish purposes of the individual. Once having reached that conclusion, we Americans, with characteristic impetuosity, have rushed in and are attempting not only to catch up with the procession of progressive nations, but are attempting to take our position in the very first rank. It is little wonder that this gigantic effort has resulted in certain crudities and excesses which must be the subject of future corrections.

As the early German Act dealt with accident insurance, so the earlier manifestations of this new order of things in the United States were along the lines of correcting the hardships which followed the injuries received in the course of employment. We inherited our employers' liability laws, as we did most of our elements of jurisprudence, from England, and for years we followed the same conservative model. When an accident occurred the injured workman could not recover any damages from his employer if the latter were able to show that the workman had been negligent to even the slightest degree, or if the injury arose from the negligence of a fellow workman or if the injury were properly associated with the occupation itself so that it was presumed that the workman had a knowledge of the inherent danger of his occupation. Now these three defenses, which may be briefly referred to as the contributory negligence, the fellow servant and the inher-

* A paper read before the National Fraternal Congress of America, August, 1914.

ent risk defenses, are antiquated, unjust and entirely inapplicable to modern industrial conditions. When only two or three men were employed in a shop, when tools were simple, when complicated methods of power transmission were absent, it was fair enough to say that the employer should not be held responsible for injury which resulted from an act of negligence upon the part of the workman himself; under those conditions it was not improper to hold that the employer should not be liable for the acts of another workman; when the processes were simple and every workman was familiar with the various details of the shop, it was not unjust to assume that when he accepted employment he was charged with a knowledge of the risks of the occupation.

All of these conditions, however, have been changed by modern industrial methods and the blind adherence to the three defenses before alluded to, brought home with added force the injustice which was being meted out to the injured workman and his dependent family. As the result, new laws have been placed upon our statute books which have attempted to remove the sufferings caused by industrial accidents, and the line of reasoning may be briefly stated as follows: Every industrial accidental injury may be placed in one of two subdivisions. Either it was caused by the willful intent of the workman or it was unintentionally received. If it belongs in the first class (and accidents solely due to intoxication are included therein) the workman himself must stand the responsibility; if it may properly be classed in the second group it is just as much a part of the cost of the production as the wear and tear of machinery and as such its cost should be added to the cost of production. This may be offered as the basic idea underlying all of the workmen's compensation laws in this country, but the various States have applied it in different ways, and as the methods of application have a direct bearing upon the subject about which I have been invited to speak, I shall briefly refer to them in order that you may see the changed attitude which the State has adopted towards insurance companies and the individual citizen.

In the State of Washington all of the employes in certain industries are brought within the Act and their employers are compelled to pay to the State a certain premium based upon their payroll expenditures. In case of accident the State furnishes medical service and if the disability should impair his earning powers materially, the injured workman receives compensation, the amount of which is based upon his average earnings; should death occur, his dependents receive a certain amount which serves to relieve any physical distress which the dependents may experience as a result of the sudden taking away of the wage-earner. Every employer engaged in the indicated occupations is required to contribute to the State fund and is not permitted to cover his liability by becoming insured in an insurance company.

In the Commonwealth of Massachusetts every employer is ostensibly given the right to decide whether he wants to go under the Act or not. I use the term "ostensibly" because it is the same kind of an option which the highwayman gives to the wayfarer when he points a loaded pistol at the pedestrian's head and says, "I don't insist upon you handing over your purse, but I think it advisable because if you don't I shall blow out your brains." It is true that the employer may elect to stay without the Act, but if he do so and one of his employes should be injured the employer would have all of his effective defenses removed and it would merely be a question of the size of the verdict which the jury would decide to give. In Massachusetts the assenting employer is required to insure in either a stock insurance company or in a mutual insurance company, the Commonwealth up to this time having refrained from the creation of an insurance fund of its own.

New York was one of the last States to put in force a Workmen's Compensation Act (a previous attempt having been declared unconstitutional) and its enactment is the most far reaching and drastic of any in this country. Employers are required to furnish their injured employes with medical and hospital service, crutches, trusses, medicines and other accessories for sixty days; if the disability extend beyond two weeks the injured workman receives two-thirds of his average earnings (within certain maximum and minimum limits) during the disability; if the injury be a specific one, such as the loss of a finger, a toe, an arm or a leg, payments are made for a definite number of weeks, irrespective of the duration of the incapacity; if death occur as a result of the injury, an allowance for funeral expenses is made, and if the deceased leave any dependents (widow, children, father, mother, grandparents, brothers or sisters) a certain percentage of his average earnings is paid to them, the total payments, however, being limited to $66.66 per month. The employer who comes within the Act must insure in a stock company, in a mutual company, in the State fund or furnish to the Commission satisfactory evidence of his financial ability to carry his own insurance; in the last named case he must make a deposit with the Commission of an amount satisfactory to it.

In New York, therefore, we shall have an opportunity to observe the relative merits of the different systems, for we shall have some employers insuring in private organizations and some insuring with the State itself. The New York Act differs from that of some other States, Michigan, for instance, in that the State fund has become an active competitor for business. It has not contented itself with furnishing a means of insurance if the employer should decide to apply to it instead of going into an insurance company, but it has gone actively into the field and has made a spirited canvass among the employers, soliciting their business and promulgating a rate which is lower than that which the insurance companies are permitted to charge. For the first time, as far as I have been able to determine, we have one of our States engaged in active competition with some of its own creations—the corporations which it has licensed. It will be interesting to observe whether the maximum efficiency can be obtained from a State institution or whether private enterprise is better equipped to furnish the particular service which insurance must render.

Heretofore my examples of State insurance have been confined to accident insurance, but I am able to refer to an experiment in this country which should be of greater interest to you. I refer to the attempt of the State of Wisconsin to issue life insurance policies, and lest you think that I am citing an isolated tendency I may remark in passing that in over fifteen of the State Legislatures, bills having for their object the creation of State Life Insurance Funds were introduced during the recent sessions, but all were defeated. With the details of the Wisconsin Act you are doubtless familiar; it plans to use State employes as an organization for spreading the idea; it is exempt from taxation and from certain expenditures which the private insurance companies have to meet. While it may be true that up to this time the number of residents of Wisconsin who have availed themselves of this privilege is comparatively small, it is hardly the part of wisdom to disregard the significance of the movement.

We all remember the investigation of life insurance conditions in New York in 1905. As a result of the disclosures at that time there was started in Massachusetts the project of savings bank insurance, whereby industrial and intermediate insurance could be sold over the counter without incurring any procurement expenses. As savings banks in Massachusetts have no capital stock, have their operations closely supervised by State officials and some of the pure administration expenses of their insurance departments are paid by the Commonwealth, it will be admitted, I think, that the

Massachusetts experiment may be properly considered as a manifestation of the spread of the State insurance idea. The Massachusetts plan, like the one in Wisconsin, has not reached the point where its size is giving the private companies any concern, but its constant progress, slow as it may be, is nevertheless of interest as indicating the trend of modern thought. I may call your attention to the fact that the Wisconsin plan was also an outcome of the investigation of life insurance companies which was undertaken in that State shortly after the Armstrong investigation in New York.

Workmen's Compensation Acts became general as a result of the dissatisfaction which the public felt with liability insurance companies. All who are familiar with insurance recognize that this condemnation was unjust and that the trouble was with the laws and not with the companies which issued policies in accordance with the laws; be this as it may, the fact remains that the constant irritation between the public and the insurance carriers had the important and far-reaching result that the State was brought into the insurance field, in some localities to the exclusion of the private companies and in others to a condition of active competition with them, with the slightly veiled threat that an unsatisfactory experience with this competitive condition will undoubtedly result in the withdrawal of the permission to the companies to engage in the work.

Now the point which I wish to bring to your attention is this: When the public became dissatisfied with liability insurance companies, it took steps to have the State engage in the business; when the public had reason to believe that evils were creeping into the administration of life insurance companies, it created organizations aimed to do away with the private insurer.

Is there not some food for thought here for the fraternal organizations? It is quite evident that we are getting away from the idea that the insurance policy is a contract, with the terms of which the contracting parties alone are interested. Tht State Legislatures have served notice upon us that a third party—the general public—is also vitally interested in seeing that insurance is placed upon a safe and sound basis. For many years the statutes have contained conservative restrictions applicable to the legal reserve companies; as a result no failures have occurred within recent years and at the time of the Armstrong investigation in New York the companies' representatives were enabled to advance the plea that no matter what evils had been disclosed, the integrity of the policy contracts had not been affected and the solvency of the issuing companies had not been questioned.

Fraternal insurance has existed for many years; it was intended that it should occupy a niche in our economic structure which could not be filled in any other way. It was intended that its benefits should be felt in fields which had been neglected by other organizations; it was felt that hand in hand with bonds of fraternal friendship should go some provision for the aid and assistance of those who were left behind when the wage-earner had gone. Can you imagine any situation which presents more valid reasons for surrounding that protection with every safeguard known to business and science? If the phrase had not become so trite and shopworn, I would inquire if a more sacred trust could exist.

If the legislators in every State had refrained from writing one word pertaining to insurance in the statute books, it would be merely an act of self-preservation for us to lay down certain rules of action for our guidance in the administration of the life insurance business, whether legal reserve or fraternal. There are certain principles which can be disregarded only at our peril. Years of experience have taught us that of each 1,000 people whose age is forty, a definite number will die before they reach the age of forty-one. It does not matter whether they are insured in one fraternal society or another. The wave of mortality sweeps on with utter disregard of such practical details. It follows, therefore, that we must provide for the payment of a certain amount to beneficiaries each year.

If our members were content to contribute each year the actual cost of the death claims which occur, everything would be simple and easy. There would be no need for reserve funds or those troublesome creatures known as actuaries. It is a fortunate thing, however, that human nature has a due regard for the future, and the insuring public, therefore, has expressed a desire to have its financial burdens lightened at the time when advancing age limits the productiveness of the individual. This effort to escape the inevitable increase in annual premiums gave birth to the necessity of accumulating a reserve fund, for it is a simple arithmetical fact, which must be apparent to all, that if we are to collect a smaller amount in the later years we must collect a larger amount in the earlier years. And this reserve fund, it will be noted, is the result not of a statutory enactment, but simply of the application of the rules of common sense arithmetic.

The fact just stated having been made patent to the legislators, they devised for the protection of you and of me a standard whereby we would be able to find out whether the company or the order to which we were entrusting our premiums was setting aside an amount necessary to carry all of its contracts to maturity, or whether it was dissipating its funds in riotous official living. That standard is the valuation basis which exists in the insurance statutes. Why anybody should object to a proper valuation is not clear to me. Would you have any confidence in your banking institution if its president told you that he did not know what its liability to its depositors amounted to? Suppose he told you that he knew that he had money enough on hand and received enough in the shape of deposits each day to pay the drafts as they were presented over the counter. Would you not be very apt to ask him whether he was using any part of your deposit to pay his salary and the rent, or whether he was providing for such expenses out of the legitimate profits of the banking business? If he professed an inability to answer your questions, would you be inclined to continue to deposit your money with him, or would you prefer to take your account to an institution which could answer your questions satisfactorily?

That is the situation in a nutshell, and it seems to me that every one of you is more interested than any insurance department can be in knowing whether his organization is in proper shape, whether its premiums have been properly computed, whether it has on hand sufficient funds to pay every claim as it matures and whether its affairs are so shaped as to render unnecessary the disturbances and inevitable damages which come from enforced re-rating.

Since supervision of insurance companies seems to be an accepted function of the State at the present time, would it not be a good idea to look upon that supervision as a friendly attempt to require all of us to maintain the necessary standards of solvency so that no scandal may occur to blot the fair face of fraternal insurance? Why should we not look upon every supervising officer as a friend who can be of assistance to us in carrying out our legitimate plans and who need not be feared as long as we are conducting our affairs along proper lines? Why should we not welcome any legislation which has for its avowed purpose the making of fraternal contracts safe, beyond the peradventure of a doubt, and the elimination of admitted evils?

Now a word in closing. As long as private insurers performed their function to the satisfaction of the people, they were permitted to continue to exercise those functions; when the confidence of the

people in those organizations became impaired, the State stepped in and assumed the role of insurer.

The message which State insurance brings to fraternal organizations, it seems to me, is simply this: "Put your house in order, so that no legitimate reason may be advanced for preventing the fraternal orders of the United States from carrying on the magnificent work which has been accomplished by them in the past in the direction of alleviating human suffering and want." Shall it be said of us in the future that we had the opportunity of profiting by the example of others and failed to avail ourselves of such a valuable privilege?

THE FIRST ANNUAL REPORT OF THE MASSACHUSETTS INDUSTRIAL ACCIDENT BOARD

THE complete statistical digest of the experience of the first year (July 1, 1912, to June 30, 1913) of operation under the Massachusetts Workmen's Compensation Act has just been published by the Massachusetts Industrial Accident Board. This report, of course, is of more interest as a matter of record than as furnishing material of immediate practical working value. The first year's experience is notoriously untrustworthy as a guide to ultimate results under any workmen's compensation law, and little of ultimate worth can be gained from Massachusetts' experience until three or four years have passed, enabling the full social and economic effects of the law to make themselves felt in the statistics. Furthermore, this report is unfortunately compiled in such form that much of its possible value is vitiated. Most serious of the omissions is that of figures for the number of employes employed in the State during the year and coming under the law. The report casually remarks: "If the figures were available, it would be interesting and valuable to show for each industry the relation between the number of employes and the number of accidents. It is possible, however, to get accurate figures only in certain classes of industry [twenty-five in all]." To anyone desirous of using the Massachusetts experience for the purposes of sound insurance calculations, such figures are, of course, not only "interesting and valuable," but indispensable.

It is unfortunate, also, that the report does not go more fully into the question of the length of time required for workmen suffering from certain specific injuries to get back to work. The tendency has invariably been seen, under workmen's compensation in other countries, for the length of time required for such injuries as broken collar-bone, broken arm, etc., to heal, to increase very largely year by year; and this is no small item in the ultimate cost of the system of workmen's compensation. It cannot but be felt that research of this kind would have been far more valuable than, for example, the work that must have been spent on reckoning the occurrence of accidents by hours of the day and days of the week.

The summary of the workings of the Massachusetts law is perhaps best given in the words of the report itself. It is as follows:

"During the first twelve months of the act there were reported to the Industrial Accident Board 89,694 non-fatal accidents.

"Four hundred and seventy-four persons engaged in occupations in Massachusetts, entitled to compensation for injury if insured, died as a result of injuries arising out of and in the course of their employment.

"Seventy-one more fatalities were reported to the Industrial Accident Board which were found on investigation not to arise out of or in the course of employment, or to be subject to the workings of the compensation act.

"Of the 474 fatally injured persons to whom the act was applicable, 290 were insured. and 184 were not insured.

"In 112 of the cases no dependents were left. In the remaining 362 cases there were 873 dependents, of whom 770 were wholly dependent and 103 were partially dependent upon the supporting member of the family.

"One hundred and sixty-four of the persons fatally injured were single, 30 were widowers, 2 were divorced, and 278 were married. These figures show that in 60 per cent of the fatal cases there were left widows in a state of dependency.

"Of the total number of non-fatal accidents reported (89,694), 68,586, or 76 per cent, were for injuries which incapacitated the employe for two weeks or less; and of these, 36,901, or 41 per cent of the total accidents reported, were for injuries which incapacitated the employe for one day only. * * *

"The number of days' work lost as a result of industrial injuries in Massachusetts, during the twelve months July 1, 1912, to June 30, 1913, on the basis of mean duration of disability, was 1,156,787.

"The number of weeks' work lost, due to industrial injury, was 165,255.

"On the basis of days' work lost, the number of persons constantly disabled, taken from industry as a result of industrial accidents in Massachusetts during the year July 1, 1912, to June 30, 1913, was 3,855.

"The average duration of disability for the 89,694 accidents reported was 12.89 days.

"The actual loss to wage-earners employed in the industries in Massachusetts, as a result of the incapacity due to industrial injuries, during the twelve months from July 1, 1912, to June 30, 1913, was $2,965,225,—a loss in wages of about $10,000 each working day.

"Of this total amount, $2,631,085 was a loss to wage-earners who were insured, and $334,140 was a loss for which the injured employes or their dependents received no compensation from insurance.

"The estimated payments by insurance companies for medical and hospital attention, disability and dependency compensation, including estimates of contingent liabilities to dependents of those killed and for those whose disability has not yet ceased, are $1,677,380.82, not including any cost of insurance administration, agents, etc., making the actual amount paid for disability and medical attention about $5,000 for each working day.

"The average cost for each accident reported, not including cost of insurance administration, etc., was $18.70."

The report then goes on to a statistical survey of the year's results, the important parts of which may be summarized as follows:

The magnitude of industrial accidents from July 1, 1912, to June 30, 1913, and the rights to compensation of those who were injured, are shown briefly in the following table:

ACCIDENT MAGNITUDE AND INSURANCE.

Accidents.	Totals.	Insured.	Not Insured.	Stood on Common Law.
Non-fatal	89,694	72,862	16,832	489
Fatal	474	290	184	1

The fact that in fatal cases the proportion of those insured to those who were not insured is much smaller than in non-fatal cases is explained by the large number of fatal accidents chargeable to steam railroads which are not insured under the Act.

Comparing the frequency distribution of non-fatal and fatal accidents by causes, there is found to be no concomitance in magnitude between the two groups. The two classes of accidents are on distinct bases. The figures on non-fatal accidents indicate for the general field where the heaviest cause incidence lies; those on fatal accidents give additional weight to those causes which re-

sulted in cases of an extremely serious nature, and shift the burden of incidence accordingly. The following table gives a summary of the year's experience in this field:

ACCIDENT FREQUENCY BY CAUSES.

Causes of Accidents.	Non-Fatal.	Fatal.
Hand labor	28,737	37
Special industries' machines	11,375	7
Falls	8,417	66
Miscellaneous (unclassified)	5,149	11
Eye injuries	4,331	..
Vehicles	3,770	43
Nails	3,462	..
Burns and boiler explosions	3,355	15
Infections from cuts, etc	2,102	5
Falling material	1,664	8
Saws	1,579	4
Presses	1,425	2
Street railways	1,302	20
Glass	1,281	1
Railroad equipment	1,230	119
Gears	1,101	2
Elevators	1,036	33
Belting	888	6
Animals, insects, etc	779	9
Lathes	767	..
Emery wheels	650	2
Hoists	630	4
Electricity	695	25
Shafting, set screws, etc	481	9
Excavations, cave-ins, etc	164	14
Wood moulders, etc	351	1
Drills	332	..
Cranes	297	11
Asphyxiation, drowning, etc	91	10
Explosions (not boiler)	215	4
Illness	290	3
Occupational diseases	104	2
Assault and fighting	207	1
Eight other causes*	631	..

*This classification applies to non-fatal accidents only.

Of the total number of persons reported as injured, 82,154, or 91 per cent, were males and 7,540, or 9 per cent, were females. The following table gives the accident frequency by age groups and by wages groups:

Age Group.	Non-Fatal.	Fatal.	Wage Group. Weekly Wage.	Non-Fatal.	Fatal.
Under 16	2,286	4	$8 and under	16,620	27
16 to 20	14,285	18	$9 to $15	53,377	288
21 to 29	31,894	135	$16 to $20	13,627	102
30 to 39	21,105	113	$21 and over	6,070	57
40 to 49	12,269	83			
50 to 59	5,876	66			
60 and over	1,979	55			

Grouping the reported fatal and non-fatal accidents according to industries, the results obtained for number, duration of disability and degrees of disability are shown in the accompanying Table A.

The cases of specific injury, for which set compensation is provided under the Massachusetts Act, numbered 967 for the year. The classified distribution of this total, together with the period for which additional compensation was due when the employe was injured, are shown below:

SUMMARY OF SPECIAL INJURIES.

Nature of Injury.	No. of Cases.	Period of Additional Compensation.
Both feet lost	1	100 weeks
Both eyes lost	2	
One eye lost	47	
One hand lost	35	50 weeks
One foot lost	22	
Two or more fingers lost	133	25 weeks
Two or more toes lost	21	
One finger lost	672	12 weeks
One toe lost	34	
Total	967	

The report then goes on to take up problems and unsuspected phases of the system of workmen's compensation which have forced themselves upon the Board's attention during the year, and to give the suggestions of the Board as to advisable changes in the law. These problems and perplexing contrarities appear all to be similar in nature to those which have manifested themselves during the early years of other workmen's compensation acts, American and foreign.

In speaking of the insurance companies and the Act, the report says:

"The Board desires to express its satisfaction with the spirit of co-operation shown by almost all the insurance companies in furtherance of the effective administration of the Act. Only a few of the companies have given any evidence of a tendency to revert to the methods which prevailed under the former liability law."

A number of the companies have taken advantage of the invitation of the Board to state what they were doing in the field of accident prevention, and their reports show the necessity of constant inspection of industrial plants and the benefit of compelling the use of mechanical safeguards wherever possible.

TABLE A. DISTRIBUTION OF ACCIDENTS BY EFFECTS AND BY INDUSTRIES.

	Total Accidents Reported.	Fatal Cases.	Non-Fatal Accidents										
				Duration of Disability — Weeks						Degree of Disability

NOTES ON INSURANCE, AMERICAN AND FOREIGN

A Bill in Congress to Establish a Bureau of War Risk Insurance.—After a conference at the White House between President Wilson, Chairman Alexander of the House Merchant Marine Committee, Chairman Underwood of the House Ways and Means Committee, Chairman Simmons of the Finance Committee and Chairman Clarke of the Senate Commerce Committee, a bill was introduced in Congress, by Chairman Alexander in the House, and Chairman Clarke in the Senate, proposing the establishment of a government bureau of war risk insurance for merchant vessels.

The text of the bill follows:

S. 6357.

IN THE SENATE OF THE UNITED STATES

August 19, 1914

Mr. Clarke of Arkansas introduced the following bill; which was read twice and referred to the Committee on Commerce

A BILL

To authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department

Whereas the foreign commerce of the United States is now greatly impeded and endangered through the absence of adequate facilities for the insurance of American vessels and their cargoes against the risks of war; and

Whereas it is deemed necessary and expedient that the United States shall temporarily provide for the export shipping trade of the United States adequate facilities for the insurance of its commerce against the risks of war: Therefore

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established in the Treasury Department a bureau to be known as the Bureau of War Risk Insurance, the director and employes of which shall be appointed by the Secretary of the Treasury; the salary of the director shall be $6,000 per annum, and the salaries of the other employes shall be fixed by the Secretary of the Treasury, but in no case to exceed $5,000 per annum for any employe: Provided, That all employes receiving a salary of $3,000 per annum or less shall be subject to the civil service laws and regulations thereunder.

Sec. 2. That the said Bureau of War Risk Insurance, subject to the general direction of the Secretary of the Treasury, shall, as soon as practicable, make provisions for the insurance of American vessels, and cargoes shipped or to be shipped therein, against loss or damage by the risks of war, wherever it shall appear to the Secretary that American vessels or shippers in American vessels are unable in any trade to secure adequate war risk insurance on terms of substantial equality with the vessels or shippers of other countries because of the protection given such vessels or shippers by those respective governments through war risk insurance.

Sec. 3. That the Bureau of War Risk Insurance, with the approval of the Secretary of the Treasury, is hereby authorized to adopt and publish a form of war risk policy, and to fix reasonable rates of premium for the insurance of American vessels and their cargoes against war risks, which rates shall be subject to such change, to each country and for each class, as the Secretary shall find may be required by the circumstances. The proceeds of the aforesaid premiums when received shall be covered into the Treasury of the United States.

Sec. 4. That the Bureau of War Risk Insurance, with the approval of the Secretary of the Treasury, shall have power to make any and all rules and regulations necessary for carrying out the purposes of this act.

Sec. 5. That the Secretary of the Treasury is authorized to establish an advisory board, to consist of three members skilled in the practices of war risk insurance, for the purpose of assisting the Bureau of War Risk Insurance in fixing rates of premium and in adjustment of claims for losses; the compensation of the members of said board to be determined by the Secretary of the Treasury. In the event of disagreement as to the claim for losses or amount thereof, between the said Bureau and the parties to said contract of insurance, an action on the claim may be brought against the United States in the District Court of the United States, sitting in admiralty, in the district in which the claimant or his agent may reside.

Sec. 6. That the Director of the Bureau of War Risk Insurance, upon the adjustment of any claims for losses in respect of which no action shall have been begun, shall, on approval of the Secretary of the Treasury, promptly pay such claim for losses to the party in interest; and the Secretary of the Treasury is directed to make provision for the speedy adjustment of claims for losses and also for the prompt notification of parties in interest of the decisions of the Bureau on their claims.

Sec. 7. That for the purpose of paying losses accruing under the provisions of this act there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $5,000,000.

Sec. 8. There is hereby appropriated, for the purpose of defraying the expenses of the establishment and maintenance of the Bureau of War Risk Insurance, out of any money of the Treasury of the United States not otherwise appropriated, the sum of $100,000.

Sec. 9. That the President is authorized to suspend the operation of this act whenever he shall find that the necessity for further war risk insurance by the Government has ceased to exist.

Sec. 10. That this act shall take effect from and after its passage.

* * *

Pneumonia as an Injury Under Workmen's Compensation.—One of the uncertainties with which underwriters have to contend in estimating probable costs under workmen's compensation is to what extent occupational diseases and sickness may be expected to figure as "injuries" under the various State laws. It may be taken as pretty well decided that where the word "accident" is specifically used in the statute, as defining the cause of injury for which compensation is payable, such cases may be considered as wholly outside the law. If, however, the word "injury" merely is used, the tendency in the decisions of the courts is rather the other way.

Still, it must not be thought that in the latter case the question is absolutely settled, for, as regards pneumonia, for example, there seems to be considerable difference of opinion as between the State and the Federal authorities, if not between the different State authorities. Under the Massachusetts Act, an employe got his feet wet in a leaky boat, which was furnished by his employer, and pneumonia developed as an after-effect. It was held by the Industrial Accident Board that this was a personal injury. (*Stone vs. Travelers Insurance Company.) Under the Federal Compensation Act relating to certain Federal employes, however, it has been held in an opinion of the Attorney General that an employe who contracted pneumonia from becoming over-heated while removing ashes from heating plant, was not entitled to compensation, as this

was not injury within the meaning of the statute. (*Re John Sheeran, 28, Op. Atty. Gen. 254.) These conflicting decisions or opinions were rendered in spite of the fact that the Federal Law is worded very much like the Massachusetts Act in relation to the "injuries" for which compensation shall be awarded.

In this connection, a decision recently rendered by the House of Lords, on appeal, under the British Workmen's Compensation Act is of interest. In the English case (Coyle or Brown vs. John Watson, Ltd.) the court takes a view of the question in harmony with that of the Massachusetts Industrial Accident Board. The facts of the case were as follows: On June 26, 1911, J. Brown was at work in Gilbertfield Colliery, Cambuslang, and in consequence of a wreck in shaft No. 2, which was the workmen's usual exit from the place where Brown worked, he was told to leave the pit by the communication road to the shaft of No. 1 pit, which was the downcast shaft. This led him to a mid-landing of No. 1 pit, where he had to wait an hour and a half. At this mid-landing a strong current of air blew in on Brown and his fellow-miners. The men had been sweating at their work and felt the down draught very cold. Brown's teeth were chattering, and his feet were cold. On the following day he was unable to start work on account of illness due to the chill incurred on the previous day. Pneumonia supervened, and he died on July 3, 1911. He left a widow and several pupil children.

Lord Dunedin delivered judgment as follows: My Lords, on the assumption that the case of Drylie was well decided, I am of opinion that this case is ruled by that. I cannot help thinking, on perusing the opinion of Lord Salvesen, that that learned judge really took the same view, although he did not wish to express a formal dissent from the views of the other members of the Second Division. It seems to me that here, as there, you have an accident interfering with the normal working of the mine, a consequential exposure of the workman to rigorous climatic conditions for a prolonged period, which exposure would not have been his fate but for the accident, and a finding of fact that the supervening illness was due to this prolonged exposure. There is no intervening circumstance, depending on some cause other than the accident, which occurs to break that chain of causation. I would illustrate what I mean by this by referring to the case of McLuckie vs. Watson, where the wetting which brought on the chill was not a necessary cause of the accident, but was due to the workman's determination not to wait his turn for the cage, but to stand in water in order to get in front of his fellows. As regards the case of Drylie, I was a party to that judgment, and I have seen no reason to alter the opinion I then formed. I have the satisfaction of knowing that those of your Lordships who have considered that case for the first time on this occasion have seen no reason to doubt that it was rightly decided. I, therefore, think that the present appeal should be allowed, and the award of the arbitrator restored.

The above cases serve to show not so much a fixed precedent in occupational disease and sickness cases as the uncertainty of the extent of the liability which insurance carriers are shouldering when insuring the workman's compensation risk. In all argument in regard to the adequacy of rates, a certain margin must be allowed for this uncertainty, unless underwriters are to find themselves suffering severe losses for which no provision has been made in calculating the price to be charged for this insurance.

* * *

Financial Relations of American Branches of Foreign Insurance Companies with Their Home Offices.—Inasmuch as the war in Europe has given rise to no inconsiderable amount of anxiety on the part of policyholders of foreign companies as to the ability of these companies to respond to calls from their United States branches for the purpose of meeting losses here, a new interest is given to a compilation made earlier in the year of the financial transactions between the American branches of foreign companies and their home offices. As was pointed out in this paper a week ago, the American branch of a foreign insurance company is in reality an independent concern, required to conform in the matter of reserves, etc., to the laws of the States in which it operates. None the less home offices may on occasion, such as the San Francisco fire, help out their American branches, just as if they were financially obligated to do so. On the other hand, remittances from foreign home offices to American branches may be simply for the purpose of providing capital for the enlargement of the business. In normal years, however, and when fresh capital is not required on this side of the water, the American branch remits such part of its realized profits as it can spare to the home office abroad.

The following table shows the remittances both ways in 1913, between most of the important foreign fire insurance companies and their American branches:

REMITTANCES BOTH WAYS BETWEEN FOREIGN COMPANIES AND THEIR AMERICAN BRANCHES IN 1913.

INSURANCE NEWS IN THE WEST

Unsettled Outlook for Fire Companies in the West.—It looks as if the fire insurance companies were going to have some annoying times in parts of the West this Winter. They have had them so long in some States that they are calloused, but now States have joined the ranks of the trouble-makers that hitherto have been quite pleasant places in which to do business. It is true that the Attor-

*These decisions may be found in Bradbury's Workmen's Compensation and State Insurance Law, pp. 371-372.

ney General of Illinois once got after the companies because of the old Belleville compact and that the anti-compact laws of Wisconsin and Michigan caused annoyance at times. Also C. A. Palmer, when he was commissioner of Michigan, found ways of sticking pins into the companies that proved quite irritating. But these were good States to operate in compared with Kansas, Missouri and some others. Now the commissioners of Illinois and Wisconsin are demanding that rates be reduced. It does not follow that rates will be reduced, for these officials are not omnipotent; but they can stir up considerable trouble. They are both resourceful men and their official position enables them to get much publicity free. Even a mere "dub," if he could get into the newspapers enough, could get a following by advocating so popular a measure as reduction in insurance rates. Though these commissioners should do no more than "start something," there will be fledgling statesmen ready when the new legislatures convene to introduce fantastic bills of various kinds that will require watching.

Commissioner Winship, of Michigan, is less radical in his demands. In fact, he can hardly be said to be making demands, but he is expressing a preference for the establishment of some power to pass upon rates when the insurer and the insured do not agree as to what they should be. Just as there were some managers who were pleased when Kansas enacted its rate regulation law, so there probably will be found to be some who favor a measure such as is suggested by Mr. Winship. There are others, however, largely of the old guard, that have consistently opposed every measure that would deprive an insurance company of its liberty to conduct its business as it sees fit. To this class the Winship proposal can scarcely be otherwise than objectionable.

These specific proposals of insurance commissioners may not be so important in themselves, but they all represent phases of the movement towards a greated regulation of fire insurance, treating it more like an out and out public utility. Experience in this line in Kansas, Missouri and Kentucky has not been of a character to make the underwriters look forward to more of it with any relish. The litigation that grew out of the Kansas law settled all question as to the right of the States to regulate rates. The troubles in Missouri and Kentucky showed that company officials and State officials, apparently irreconcilable, can be brought together through the influence of business men. In these States this was done only after suspension of insurance business, loss to agent and inconvenience to the public. If this be possible after harm has been done, it would seem that it should be possible before drastic legislation has been enacted and antagonism has been heated to the boiling point. Perhaps mediation and compromise before legislation instead of after may be worked out as a programme for the future, resulting in more satisfaction to all parties concerned.

* * *

Western Live Stock Insurance Association to Be Organized.—On Wednesday of next week representatives of live stock insurance companies operating in the West will meet at Indianapolis for the purpose of forming an organization. It is expected that ten companies will be represented, all of them stock corporations. This movement toward organization has been going on for a number of months, J. W. Newman, president of the Kentucky Live Stock of Louisville, being the most active factor. There is much to be gained from exchange of experience among live stock insurance companies and also from co-operation among them. Some of those operating in the West have pioneered much of the territory and have a good knowledge of what fields should be avoided. They could save newer companies in the field a large amount of money by imparting this information to them. It is especially by co-operating with regard to agents and veterinarians, however, that it is hoped to gain most.

* * *

Excellent Prospect for New Association of Accident Underwriters.—At the last meeting in Chicago of prominent accident insurance men who are interested in the organization of the National Accident Underwriters, it was decided that the presidents of the three existing organizations should write the members of their respective organizations inviting them to join the new one. To A. E. Forrest, of the North American Accident, was assigned the duty of inviting the non-affiliated companies. C. H. Boyer, president of the Association of Accident Underwriters, was the first to get out his letters. At the end of last week he had received applications from twenty-one stock companies, not to mention the mutuals. If the others have as good returns from their letters a large initial membership will be assured. Only three companies, so far as known, as opposed to the new organization, and it is believed that two of them will come in. Replies received by Mr. Boyer indicate that a number of companies that intend to join the organization will not be represented at the Atlantic City meeting. A large proportion of the industrial companies are located in the West. Many of them are small and are obliged to watch every item of expense closely. The cost of a trip to Atlantic City is too heavy for some of them.

* * *

Continental Casualty to Write Workmen's Compensation Insurance.—Announcement by President H. G. B. Alexander that the Continental Casualty will write workmen's compensation insurance is of interest. It will be recalled that four or five years ago the company was on the point of going into the general casualty business as a multiple line company. That plan was abandoned or at least postponed. It is said that Mr. Alexander has not altered his opinion that it would be unwise to enter the multiple line field, but the writing of workmen's compensation insurance is regarded differently. It has been stated on good authority that it is not the intention of the Continental Casualty to make any drive for this business, but rather to write a moderate volume which it can secure with few changes in its agency force and handle at very little expense at the home office. Considerable of the company's present machinery will be available in the new line, especially its medical and claim department both at the home office and in the field. The company believes that by operating in this line in a modest way it can make a fair profit with very little investment in plant.

* * *

Important Agency Changes in Chicago.—Important changes in the personnel of the Meeker-Magner Company of Chicago will take place on September 1. This corporation is general agent of the General Accident in Illinois and also has an agency of the American Surety for Chicago. Lee B. Vastine, who has been president of the company, and M. J. Grogan, one of its vice-presidents, will withdraw and form the firm of Vastine & Grogan, taking a general agency of the Hartford Accident and Indemnity reporting through the Chicago branch office. As Mr. Vastine has a following of brokers controlling considerable business and Mr. Grogan has a direct business of good proportions, the change will doubtless reduce for the time the volume done by the General Accident, although Thomas J. Magner, who is the real head of the Meeker-Magner Company, and several of his associates will continue to represent the General Accident.

La Salle

Chicago, August 21, 1914.

ITEMS OF INSURANCE NEWS.

A bill has been passed by the Georgia Legislature requiring that all compaints for a receiver for an insurance company shall be submitted to the Insurance Commissioner and that no court of equity shall have jurisdiction unless the complaint is approved by the Governor, Attorney General and the Commissioner.

After several years of effort, the Georgia Legislature has finally adopted a vital statistics law for that State. The law provides for the registration of births and deaths under the supervision of the State Board of Health and for the appointment of a State registrar of vital statistics.

It is reported that the Missouri Compensation Commission has agreed upon a draft of the measure to be presented at the next session of the Legislature, and it is understood to be patterned after the Massachusetts law and will provide for a State Industrial Commission to administer the act. The act will abolish the present hotel inspection department, present board of mediation and arbitration, present State factory inspection department and present bureau of labor statistics. The duties of all of these are to be included in those of the Industrial Commission.

It is stated with much emphasis that those in control of the Republican organization in Pennsylvania have committed themselves to a compensation measure that will provide compulsory State workmen's compensation, similar to the drastic statutes now in force in Ohio and some of the other far Western States. That the rumor has more than ordinary significance is attested by the fact that a committee consisting of S. H. Pcole, of the Fidelity and Casualty; T. N. Metcalf, of the Standard, and J. S. Turn, of the Aetna, representing the Casualty Underwriters' Association of Philadelpha, has been appointed to take the matter up for consideration.

The United States Treasury Department has again granted a special dispensation allowing surety companies to write depository bonds on crop moving funds up to 20 per cent of capital and surplus instead of the customary 10 per cent in the case of other bonds. This action was also taken in 1913. This dispensation is granted because crop moving bonds are considered more in the light of collateral than of credit bonds, as the securities deposited are subject to joint control of the Government, the bank and the surety company.

Insurance Commissioner Ferguson, of Oregon, has issued a bulletin to agents for surety and casualty companies, which is in effect an ultimatum that the companies must transact business through authorized agents, or he will put them out of business.

Jeremiah F. Connor, of Oneida, N. Y., has been appointed counsel for the New York Workmen's Compensation Commission. Mr. Connor has been counsel for the State Conservation Commission since June last year. He was appointed city clerk of Oneida in 1902. In 1911 Mr. Connor was appointed a deputy attorney general and served until being made counsel for the conservation commission.

The Texas Attorney General's department has ruled that a mutual fire insurance company incorporated under the laws of Texas is not authorized to insure automobiles or other motor vehicles against any character of risk.

It is reported in press dispatches that Compensation Commissioner Chandler, of Connecticut, has recently ruled that unless an employer himself re-employs or else procures employment for an injured employe after the latter's recovery from an industrial accident, the employe is entitled to a continuation of his compensation for the days he is idle after recovery and until he finds employment.

The following is, in brief, the programme of the ninth annual meeting of the American Life Convention, to be held at Dallas, Texas, on October 7, 8, 9 and 10:

October 7, 10:30 A. M. (Medical Section): "Inspection of Risks," Dr. E. J. Spratling, Empire Life; "The Heart in Life Insurance," Dr. J. S. Lankford, San Antonio Life; "The Medico Actuarial Investigation and Its Effect Upon the Selection of Risks," Dr. H. A. Baker, Pittsburgh Life and Trust; "Certain Aspects of Life Underwriting," Mr. Franklin B. Mead, Secretary Lincoln National Life; topics to be announced later, Dr. Marion Souchon, Pan American Life, and Dr. E. W. Stevenson, Standard Life.

October 7, 10:30 A. M. (Legal Section): "Federal Supervision of Life Insurance—Possibility—Feasibility," Dan W. Simms, General Counsel La Fayette Life; "Liability of Insurance Companies as to the Acts of Agents and Limited Authority," John F. Onion, General Counsel San Antonio Life; "A Year in Court," Mr. Guilford A. Deitch, General Counsel Reserve Loan Life.

The address of Mr. Deitch will be delivered to the entire membership at the morning session of the annual meeting Friday, October 9, 1914.

October 8, 10:30 A. M.: Address of welcome; address of president. 2:00 P. M.: Address, Hon. W. W. Collier, Insurance Commissioner of Texas; "Getting Business," Mr. John C. Riheldaffer, Secretary George Washington Life; "Retaining Business," Mr. Arthur F. Hall, Vice-President Lincoln National Life. 8:00 P. M.: Discussion.

October 9, 9:30 A. M.: "Western and Southern Life Companies," Mr. J. B. Reynolds, President Kansas City Life; "A Year in Court," Mr. Guilford A. Deitch, General Counsel Reserve Loan Life; Discussion.

2:00 P. M.: "Opportunities for Young Men in Life Insurance Work," Mr. Crawford H. Ellis, President Pan American Life; "Life Underwriting as an Art," Mr. Charles W. Scovel, Associate General Agent Northwestern Mutual Life; "From the Standpoint of the Onlooker," Mr. C. M. Cartwright, Vice-President Western Underwriter Company; Discussion. 8:00 P. M.: Executive session.

October 10, 9:30 A. M.: Reports of Standing Committee; Unfinished Business; New Business; Election of Officers; Adjournment.

At the nineteenth annual meeting of the National Association of Insurance Agents, held at Minneapolis this week, the following officers were elected for the coming year: President, C. F. Hildreth, Freeport, Ill.; vice-presidents, New England States: L. C. Merrill, Concord, N. H.; middle department States: G. T. Amsden, Rochester, N. Y.; Southwestern States: L. H. Stubbs, St. Joseph, Mo.; Southeastern States: Walker Taylor, Wilmington, N. C. ; middle Western States: W. A. Eldridge, Detroit, Mich.; E. H. Forry, Indianapolis, and James B. Leedom, Milwaukee, Wis.; Rocky Mountain States: David J. Main, Denver.

With the exceptions of Messrs. Amsden and Main, all the vice-presidents are re-elected. Henry H. Putnam, of Boston, was unanimously re-elected secretary-treasurer.

Chairmen of standing committees were all re-elected as follows: Executive, E. C. Roth, Buffalo; grievance, J. K. Livingston, Detroit; legislative, George D. Markham, St. Louis; organization, F. E. Warner, Salem, Mass.

A permanent organization was formed last week by twenty-five general agents of casualty and surety companies in Texas to be known as the Texas Association of Casualty and Surety Agents. C. H. Verschoyle, of Dallas, was elected president. The executive committee was authorized to draft constitution and by-laws to be submitted at a second meeting to be held in the near future, probably at Galveston.

The St. Paul Fire and Marine has increased its capital from $500,000 to $1,000,000 by transferring $500,000 from surplus account to capital.

The Florida Fire has decided to continue in business. Its capital is being reduced to $100,000, wiping out the impairment and giving a surplus of about $60,000. C. H. Barnes has been re-elected president; E. A. Groover, vice-president and manager.

The West Virginia Local Agents' Association has responded to the recommendation of the West Virginia Fire Underwriters' Association, that commissions be put on a 15 per cent flat and 10 per cent contingent basis, with the following resolution:

Resolved by the fire insurance agents of the State of West Virginia in conference assembled that we are unalterably opposed to the proposed change in our commission as mentioned in circular to companies and members of West Virginia Underwriters' Association; and request that we be conferred with at least, if a change is decided on, and that a committee from the agents be given an opportunity of conferring with a similar committee from the West Virginia Underwriters' Association before action is taken.

Drastic action has been taken by the Birmingham, Ala., city commissioners to prevent the accumulation of trash and combustible material about the premises of any lot or building, in the hope of reducing the fire hazard of Birmingham. The section of the code which has regulated this in the past has called for notification by the city officials to the owner or occupant when improper conditions are found, but this has been stricken out of the section and all persons now found with any such accumulations about their property will be immediately arrested.

It is probable that for the time being insurance companies will take the full sixty days under the policy contract for the payment of losses because of the situation developed by the European war. If collections are delayed and companies have to pay their losses without the sixty day clause, it might force them to sell some of their good securities at a sacrifice.

The Texas automobile rate war shows no signs of abatement, some companies allowing as much as 50 per cent off the regular rates. Casualty men blame the fire insurance companies for starting the war. The reduction has been only on property damage, collision, fire and theft.

The Fireman's Fund started issuing its new automobile liability policy on August 1. This is the first fire company in the United States to issue as one company's contract such a policy.

A committee of five has been appointed by the Plate Glass Underwriters' Association to consider the question of commissions on plate glass insurance.

Under the title "The Insurance Broker: His Status Under the Laws of the Various States," Mr. Harrison Law, of Nutley, N. J., has brought together in a booklet the statutory provisions of such States as have enacted laws upon the subject, regarding the terms upon which insurance brokers (and, to some extent, insurance agents) are admitted to do busi-ness in these States. All essential matters about certificates, licenses, license fees, conditions under which an insurance brokerage business may be carried on, and the like, are compactly brought together, so that the requirements of any given State may be found in a moment. The booklet is one which every insurance broker and agent should have at hand; and its price is only 50 cents.

FINANCE AND COMMERCE

Financial and Commercial Review.
Banking Situation at Home and Abroad.
Statistics of Cotton and Coffee.
Market Prices of Securities and Commodities.

THE present is no time for ultra pessimistic utterances or for the indulgence of hopeless views of the future. On the other hand, it is no time for underestimating the conditions that have come about or for the bringing forward of false hopes regarding the likelihood of a boom in this country as a result of the European war. The plain fact,—and it has to be faced,—is that the security markets are faced by a world calamity. No economic fallacies can alter that fact. That the United States is in a better position than any other first-class power to stand the effects of this calamity is obvious. This country in the long run may benefit enormously in some directions by the changes that will be brought about. But the idea sprung in some quarters that this country can enjoy a period of prosperity while this conflict is in progress or even later, while Europe is staggering under the enormous burden of accumulated debts and the waste of productive energy and destruction of capital on an enormous scale, is too absurd to consider.

Social and economic science has scarcely ventured to speculate on the effects of warfare conducted on so vast a scale as is now under way. But in a vague way past experience prepares us for the general results to be expected. These are a world-wide exhaustion of capital with a period of utter prostration of trade and business in the countries involved. Necessarily the degree and the length of the depression that the world will suffer will depend upon the duration and scope of the conflict. But incalculable damage has already been done, and even if the war were to stop now it is certain that the process of recovery would be long and arduous. No such blow to the world's commerce and finance as that sustained by the shock of the opening of hostilities could have been delivered without stupendous consequences. It is the opinion of one of our greatest bankers that more injury has already been done to the overseas commerce and trade of the German Empire than would be covered by the imposition of any possible indemnity than could be imagined.

Our economists and statisticians are already endeavoring to figure on the net cost of the war to the countries involved in the gigantic struggle. These figures which are generally based on the estimates of the cost of the Balkan war, run into many billions of dollars. In the Balkan war only small nations were involved and those whose prosperity was least bound up with the world's trade and finance. The Balkan war itself was estimated to have cost something like a billion dollars. Whatever the figure at which the cost of the present war is put, it is sure to be an underestimate. Already in the United States business is beginning to feel the inevitable consequences of the disruption of international commerce and trade and the first effects are not reassuring. Rising security prices, active trade and corporate enterprise and, in short, general prosperity depend in the last analysis upon an accumulation of surplus wealth in the world. We are now faced with an enormous drain upon this surplus capital which will make its influence felt everywhere. A staggering burden will be placed upon the national debts of the countries involved in the war. The waste of productive energy according to the length of the struggle and the destruction of property in the actual theatre of war will be enormous. To this must be added the economic value of the men killed or maimed for life, which will make the process of recovery and the wiping out of the burden of taxation and debt the more difficult and drawn out. It is perhaps only when peace is declared that an idea of the real price to be paid will become evident.

In the immediate future it is not unlikely that an artificial boom will occur in the prices of certain goods and merchandise made dear by the extraordinary demands placed upon them by war. In the great rise in wheat here, there are signs that the food problem is already pressing for attention in Europe. This country stands in a fair way to benefit from these demands. Also in the long run the United States may benefit enormously from acquiring a big share of the foreign trade of the world, particularly in South America. But for every industry in this country that is boomed by the European war, it is safe to say that a dozen more are depressed. It is not impossible that the closing of the present war may be marked by a sudden and violent rise in the security markets. But it must be remembered that any such inflation of prices would probably be artificial and not permanent. The world-wide collapse in 1873 of the terrific boom that followed the Franco-Prussian war was an example of a boom based on a rise in prices and not values. In the security markets during the past year or so we have seen something of the repressive influences of the aftermath of war. When Secretary of the Interior Lane and other optimists predict greater industrial expansion for this country as a result of the European war, they can hardly be speaking of the immediate future.

It is in the secondary effects of the war that there lie great and undoubtedly well founded hopes for ultimate prosperity the world over. The economic crime that lies in the maintenance and continuous aggrandizement of huge navies and standing armies is likely to obtrude itself with irresistible force. Whether this is likely to be the last great war in the world we are not prepared to say, but the defeat of the nation,—and without the defeat of Germany we believe no lasting peace is possible,—which has done more than any other to foster this vast waste of public funds will mean a tremendous step toward the limitation of national armaments, if not for the establishment of a lasting peace. The significance of such a development becomes apparent when it is realized that according to some statisticians the war system of Europe directly and indirectly costs something like $2,000,000,000 a year to maintain.

In the period during which the world is recovering from the exhaustion of war there will be tremendous opportunities for investment in good securities. American securities will be especially desirable because it is obvious that the United States is certain to lead the world in the recovery. Even now it is a question whether the investor can do better than to hold good securities. Whether we are going to see a further return of foreign-owned American securities to this side on a big scale it is impossible to say. The huge selling from abroad just prior to the closing of the Stock Exchange probably represented the liquidation of Europe's speculative position rather than its investment holdings. We shall have to absorb dribbling liquidation probably for some time to come, but it is to be remembered that American securities will compare very favorably with those of European countries and it is probable that in a general way they will not be disturbed by the foreign investor except when absolutely necessary. Nevertheless, consideration of the progress of corporate enterprise in America must allow for the tremendously important fact that about one-third of the annual output of new securities in this country is

normally bought by Europe. For the next few years this market will be closed to us.

Just as present discussion in the financial community runs pretty generally upon the probable date for the reopening of the Stock Exchange. There is a great exchange of views on this question and a good deal of confusion of thought. The one thing certain seems to be that those in charge of affairs have made no preparations for the event. The fact is that the problem is an enormously difficult one. Wall Street is just beginning to appreciate that closing an exchange in the midst of a panic is a very different thing to opening it later on. When business was suspended on the Exchange a tremendous selling movement was in progress. The intention was that the Exchange would remain closed until reasons for this selling had been removed or until methods for taking care of it had been devised. So far no definite progress has taken place in either direction. The situation in Europe is still in a tremendously critical state and foreign liquidation would undoubtedly be resumed if it could be conducted. The banks here have simply managed to maintain the situation in status quo. But the task has made a tremendous impression on their reserves and there is no doubt that a reopening of the Exchange at the present time with the prospect of falling prices would put a severe strain on the banking position. The question of reopening, therefore, undoubtedly rests with the banks. But the stagnation in the security markets and the locking up of a tremendous quantity of money in collateral loans is working hardship upon the business world. There is no commercial paper market and even in cases where accommodation is extended privately rates have risen to a point which is simply prohibitive.

It appears, therefore, that as a result of this credit stringency we are facing in this country, as well as in other parts of the world, a liquidation in business. There are after all only two ways in which the banking position may be strengthened. One is by a liquidation in the securities markets and the other by a liquidation in general business. But the securities markets are being held artificially in a state of absolute rigidity. No liquidation is possible there while the Exchange remains closed. It remains, therefore, for business to liquidate first, or perhaps simultaneously. Fortunately, there has been no over-expansion in the world of business for several years. But it is pretty safe to say that from now on business will proceed on conservative lines.

COTTON

August 22, 1914.

ALL the cotton exchanges in the world upon which contracts for the future delivery of American cotton are made have remained closed during the past week and there is therefore no chronicle of events in those markets, as markets for cotton, to be set down down. There has, indeed, been intense activity in all these futures markets, but it has been activity in the way of reducing commitments, untangling the web of contracts outstanding between members of the several exchanges among themselves and of members of the different exchanges with each other, and also in the way of fortifying financial positions by getting in moneys due from customers, in order that when the exchanges ultimately open again for business, with prices, as it is believed, far lower than those prevailing a fortnight ago, there may be no doubt about the ability of every member to meet his engagements to his fellow members without distress. In New York, almost all outstanding contracts have with the consent of customers now been transferred to the single position of December; while in Liverpool the same operation has concentrated all contracts in the coupled position of January-February. A mutual understanding has been arrived at among the members of both these exchanges, that no new business, either in spot cotton or in future contracts, shall be undertaken, until the stocks of cotton in the two markets have been disposed of to spinners, and the outstanding contracts, which now virtually all represent hedges against actual cotton, shall have been liquidated. In other words, these two exchanges have decided that the law of self-preservation requires them for the time being to abandon their customary function as markets in which contracts for future delivery are freely made. and to leave to others.—primarily. of course, to the producers and owners of cotton in the South,—the risk of carrying their cotton until spinners come into the market for it. This, for the most part, spinners show not the slightest inclination to do, even where they have access to the spot and futures markets, as is the case with the American, English, French, Italian, Japanese and Spanish spinners. Evidently all are of the opinion that the uncertainties occasioned by the European War are too great to warrant them in making any commitments or even calculations for the future. They are spinning cotton in considerable quantity, though the financial complications have undoubtedly for the time being reduced their operations. As they use up the cotton they have on hand they buy enough to replace it; but they do virtually nothing for the future. This, of course, greatly delays and prolongs the disposition of the stocks of cotton in markets like New York and Liverpool, thus deferring to an uncertain date the opening of the exchanges. It does more than this. however: it completely removes the support to the market value of cotton which for long years past has been derived from the anticipation by spinners of their future needs. Thus, if the futures exchanges were now to open, it would be a case of all sellers and virtually no buyers. The cotton crop is being rapidly picked and ginned; Southern merchants and bankers. as well as farmers, are extremely solicitous about the price to which cotton will decline, when a market for it is opened; and the already large accumulations of new crop cotton in the South would without doubt be incontinently sold at the best price it would bring, for fear that a few days' delay would bring more cotton for sale and lower prices still. In short, the entire process of translating the future into terms of the present, in respect of the price of cotton, has for the time being abruptly ceased. And the result is chaos in the cotton markets of the South, complete uncertainty on the part of spinners, and the probability that unless method of relief through Government aid is discovered at the conference to be held in Washington, on Monday next, the year's crop will for the most part be sold at whatever price it will bring within the first four months of the season, without regard to its economic value, if only its weight could be distributed over the twelve or thirteen months in which it will be consumed. Moreover, the American exchanges are rendered even more irresolute than they otherwise would be under the existing circumstances, by reason of the enactment into law of the Lever Bill, regulating American cotton exchanges and attempting to regulate foreign exchanges, with the express intent of fettering and hampering the initiative and the free operations of the cotton merchants who predominantly compose those exchanges. With this legislation to face, and considering the impossibility of forecasting its effects, American cotton merchants are to-day almost eliminated from the serious task of saving to the country and to the cotton producers, the larger part of the true value of this season's cotton crop. As regards the condition of the crop itself almost nobody is now giving it any attention. Prevalent opinion is that it has considerably improved since the last report of the Department of Agriculture; yet the interim report of Miss Kate M. Giles, issued on August 18, made the condition as of August 10 only 78.3 per cent of normal, a gain of .3 per cent in the period from July 25 to August 10. Since August 10, however, there have been general rains, probably beneficial for the most part, yet too heavy for the good of the plant in considerable sections of Texas.

THE CONTRACT MARKETS

THE NEW YORK COTTON EXCHANGE.

The following were the high, low and closing bid prices for each delivery, on Friday, July 31, in cents and hundredths of a cent per pound, gross weight:

Dividends of Fall River Cotton Mills for Third Quarter.—Messrs. G. M. Haffards & Co., of Fall River, Mass., have issued their regular quarterly statement of the dividend record of the Fall River cotton mills. This statement, for the third quarter of 1914, is as follows:

Name of Corporation.	Par Value.	Capital.	Rate.	Amount.
American Linen Co	100	$800,000	0	
Ancona Linen Co	100	{ 100,000 Pfd. } { 200,000 Com. }	1½†	$1,500
Arkwright Mills	100	450,000	0	
Barnard Mfg. Co	100	500,000	0	
Bourne Mills	100	1,000,000	1½	15,000
Border City Mfg. Co	100	1,000,000	1	10,000
Barnaby Mfg. Co	100	350,000	0	
Chace Mills	100	1,200,000	1½	18,000
Cornell Mills	100	400,000	2	8,000
Conanicut Mills	100	*300,000	1	2,517
Davis Mills	100	1,250,000	1½	18,750
Davol Mills	100	500,000	1½	7,500
Flint Mills	100	1,160,000	1½	17,400
Granite Mills	100	1,000,000	0	
Hargraves Mills	100	800,000	0	
King Philip Mills	100	1,500,000	1½	22,500
Lincoln Mfg. Co	100	1,250,000	0	
Luther Mfg. Co	100	525,000	1½	7,875
Laurel Lake Mills	100	600,000	1	6,000
Merchants Mfg. Co	100	1,200,000	1	12,000
Mechanics Mills	100	750,000	1	7,500
Narragansett Mills	100	400,000	1	4,000
Osborn Mills	100	750,000	1½	11,250
Parker Mills	100	800,000	0	
Pilgrim Mills	100	{ 350,000 Pfd. } { 700,000 Com. }	1½†	5,250
Pocasset Mfg. Co	100	1,200,000	1	12,000
Richard Borden Mfg. Co	100	1,000,000	1½	15,000
Sagamore Mfg. Co	100	1,200,000	2	24,000
Seaconnet Mills	100	600,000	0	
Shove Mills	100	550,000	1¼	6,875
Stafford Mills	100	1,000,000	0	
Stevens Mfg. Co	100	700,000	1½	10,500
Tecumseh Mills	100	750,000	1½	11,250
Troy C. & W. Manuf'y	500	300,000	2	6,000
Union Cotton Mfg. Co	100	1,200,000	1½	18,000
Wampanoag Mills	100	750,000	1	7,500
Weetamoe Mills	100	500,000	1	5,000
		$29,585,000		$291,167

An average of 1.01 + % on the above capital excluding Ancona Co. and Pilgrim Mills, Common.

*Authorized capital. †On Preferred stock.

New York Cotton Exchange to Change Its Statistical Year.—At the Convention of American Cotton Exchanges held in Augusta, Ga., in May last, there was a strong preponderance of opinion in favor of changing the beginning of the statistical cotton year from September 1 to August 1, the chief reason being that the extension of cotton cultivation in the extreme Southerly portions of Georgia, Alabama and Texas, where cotton matures to a large extent in July and August in normal years, has made the movement

of new crop cotton in August much heavier than it formerly was. With the statistical year as it now is, this August movement of new crop cotton must be counted at belonging to the commercial crop of the previous season. Hence there exists throughout the crop year a constant disparity between the amount of cotton reported by the United States Census Bureau as ginned up to a given date, and the cotton exchange figures of the amount of new crop cotton that has come into sight. To obviate this difficulty the Augusta Convention adopted a resolution requesting the cotton exchanges of the country to make the statistical year begin with August 1. The Memphis Cotton Exchange has already adopted this suggestion; and now the New York Cotton Exchange has taken the same action,—the new system to go into effect on August 1, 1915. Accordingly the New York Cotton Exchange statistics for the season of 1914-1915 will embrace only eleven months.

* * *

Cotton Outlook in Asiatic Russia.—In a recent consular report, United States Consul-General John H. Snodgrass, stationed at Moscow, discusses the cost and conditions of the production of cotton in Asiatic Russia, and the crop acreage and outlook for the season of 1914. Mr. Snodgrass says, in part:

"Cotton cultivation is very expensive and the land owners can succeed only if credit is extended to them by cotton firms. These firms usually advance money for that purpose in the Spring under security of the future crop. Last season's market, however, brought considerable loss, which with the general economic crisis in Turkestan forced the cotton firms to curtail the Spring loans in 1914.

"Forty to forty-five per cent of the money advanced last year, amounting to $5,000,000 to $6,000,000, has not yet been returned. The cotton firms this year extended the time of payment of the old debts and added only 10 to 20 per cent of new credits, which were conservatively granted late in the season. Cotton planters, however, came out this season better than expected on account of the abundance of cattle and feed and the high cotton prices of last year, which made money more plentiful than usual.

"The following figures for the cotton acreage of Russia, which differ considerably from those of the Central Statistical Committee, were taken from 'Industry and Trade' for June 28. The area planted to cotton in 1914 was given as 1,979,00 acres, an increase of about 5 per cent over 1913. The acreage is distributed as follows: Transcaspia, 114,600 acres; Bokhara Territory and Tchardjuy and Kerkin districts, 158,610 acres; Samarkand Territory and Kattakurgan district, 90,040 acres; Tashkend and Syr-Daria territories, 121,490 acres; Ferghana Territory, 1,048,840 acres; Khiva Territory, 126,210 acres. The latest exact figures for the cotton acreage of Transcaucasia relate to 1912, when there were 303,850 acres; for 1914 the area under cotton is estimated at 319,110 acres."

NEW YORK QUOTATIONS FOR STANDARD COTTON GOODS AND YARNS

The following are quoted prices in the New York market for typical standard cotton goods (in cents per yard) and cotton yarns (in cents per pound) on Saturday of last week and on Wednesday of the present week:

Cloths.	Saturday.	Wednesday.

The Capitalization of the World's Railroads.—The Bureau of Railway News and Statistics has recently issued the following bulletin:

"Although United States railways in 1912 comprised more than one-third the total mileage of the earth, their capital represented but little more than one-fourth of the entire investment in the world's railways. Average capital per mile of United States railways, in other words, was only slightly over three quarters the average per mile of the entire world.

"How moderate capitalization of our railways is in comparison with most foreign countries is shown strikingly in the yearly figures of the Royal Prussian Department of Public Works.

"During the year 1912, according to these figures, approximately $1,745,000,000 was added to the world's investment in railways, or an average of $119,455 for every mile added to the total mileage during the year. This brought the aggregate capital of the world's railways at the end of 1912 to the gigantic sum of $58,695,209,664. * * *

"For the United States, however, capital in 1911 is placed at $19,200,000,000, or $78,722 per mile. This is the erroneous gross capital which includes all duplications due to intercorporate ownership, and disregards the Interstate Commerce Commission's figure of $15,000,000,000, or $63,944 per mile, as the correct capital of United States railways. Making this correction, total world capital is $54,502,553,664, or $81,284 per mile, against $63,944 in the United States.

"This places the United States eighteenth in the list of countries in order of capital per mile, though by a margin of more than 200,000 miles first in point of mileage. The countries which exceed the United States in capital per mile are, in order:

England	$269,496	Spain	$83,358
Belgium	189,023	Japan	84,301
France	143,435	Russia	84,301
Brazil	142,080	Holland	82,796
Italy	124,116	Servia	73,373
Austria	120,311	Hungary	69,084
Switzerland	117,953	New South Wales	65,989
Germany	116,661	Algiers	64,019
Roumania	88,937	United States	63,944

"Some of these countries of higher capital have narrow gauge railways, while many others offer service and equipment which would not be tolerated in the United States. Only the following countries, continuing the order, are below our own railways in capital per mile, most of them being countries of very poor railway facilities, while for some the latest figures represent capital from five to ten years ago:

Sumatra	$60,885	East India	$45,080
Denmark	59,683	Norway	43,256
Victoria	58,588	Cuba	42,624
Argentina	56,821	Tasmania	42,230
Uruguay	52,021	South Australia	39,923
Chile	52,480	Siam	38,681
New Zealand	52,206	Finland	36,864
Sweden	51,386	Lagos	33,792
Canada	50,952	Queensland	32,600
South Africa	50,380	West Australia	25,599
Gold Coast	49,152	Sierra Leone	20,582
Bulgaria	45,651		

"Europe retains by a large margin the leadership for the State-owned railways, 113,699 miles being under government ownership against 98,952 under private. North and South America have only 22,237 miles of State-owned roads, against 321,406 of private. Australia has the largest proportion under government ownership, 18,970 miles out of 21,578, while in Asia 43,480 out of 66,534, and in Africa 15,835 out of 26,491 are State-owned. For the world, private companies own 456,416 miles, or 68 per cent of the total; governments, 214,581 miles, or 32 per cent of the total."

* * *

Census of Domestic Animals in France.—According to "L'Économiste Européen," the French Ministry of Agriculture has just published statistics giving the number of domestic animals in France on December 31, 1913, which, with comparative figures for the four years preceding, are shown in the following table:

Animals.	1909.	1910.	1911.	1912.	1913.
Cattle	14,297,570	14,532,030	14,435,530	14,705,900	14,807,380
Donkeys and mules	555,710	553,450	554,630	555,070	552,960
Goats	1,418,000	1,417,710	1,424,180	1,408,520	1,453,230
Horses	3,236,130	3,197,720	3,236,110	3,222,140	3,230,700
Pigs	7,305,850	6,900,230	6,719,570	6,903,750	7,047,750
Sheep	17,357,640	17,110,760	16,425,330	16,467,700	16,213,030

THE PRUDENTIAL INSURANCE CO. OF AMERICA

FORREST F. DRYDEN, President — HOME OFFICE, NEWARK, N. J.

Incorporated as a Stock Company by the State of New Jersey

January 1st, 1914

Atlantic Mutual Insurance Company

ATLANTIC BUILDING

51 Wall Street, New York

INSURES AGAINST MARINE AND INLAND TRANSPORTATION RISK AND WILL ISSUE POLICIES MAKING LOSS PAYABLE IN EUROPE AND ORIENTAL COUNTRIES.

Chartered by the State of New York in 1842, was preceded by a Stock Company of a similar name. The latter Company was liquidated and part of its Capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the Company has Insured property to the value of	$27,219,045,826.00	
Received Premiums thereon to the extent of		$282,298,429.80
Paid Losses during that period	$141,567,550.30	
Issued Certificates of Profits to dealers	$89,740,400.00	
Of which there have been redeemed	$82,497,340.00	
Leaving outstanding at present time	$7,243,060.00	
Interest paid on Certificates amounts to	$22,585,640.25	
On December 31, 1913, the Assets of the Company amounted to		$13,259,024.16

The profits of the Company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed. In accordance with the charter.

A. A. RAVEN, President

A. R. MARSH, Editor

OUR general readers will perhaps think that we are devoting too much of our space to-day to the subject of cotton. Under ordinary circumstances this would certainly be a just criticism. It happens, however, that at the present moment not a single person in the United States is unconcerned with cotton, whether he knows it or not. It has come about during the past quarter century that cotton has assumed an importance perhaps out of proportion to its relative value as one of the commodities we produce. It has become our one great cash crop, of which far the larger part is exported, and through which the annual settlement of the international balances against us is accomplished. It has always been a favorite saying in the South that "cotton is gold"; and, although there has been a considerable element of delusion in Southern interpretation of this phrase, it is unquestionably true that cotton has come more and more to serve us in place of the gold which we should otherwise have to pay to other countries for their constantly accruing account against us. For this reason an interruption of the flow of our cotton to other countries gravely impedes our good credit and the meeting promptly of our obligations to them; it may compel us either to part with so great an amount of actual gold as to impair the entire structure of our domestic credit, or else to resort to that extreme measure, disgraceful to a country not under the stress of war, a moratorium. Almost the same untoward results spring from a sudden and severe depreciation of the price, and hence of the aggregate value of our cotton crop. If we get in the course of a year, not the usual $600,000,000, but only $300,000,000, for the cotton we export, we are still left with not far from one-half of our balance of annual obligations to foreign countries unpaid; and sooner or later we must remit gold instead of cotton to pay the remainder, thus diminishing *pro tanto* the foundation of all our credit at home. This position of technical importance occupied by cotton in our financial and commercial activities and relations must make it a matter of extreme solicitude to every American business man that there should be no important diminution during a given year of the aggregate amount obtained by us from our exported cotton. It goes without saying that the case of the million and a half cotton producers would be lamentable should such an occurrence afflict us; and the personal and economic distress occasioned throughout the districts devoted to cotton culture must excite the profoundest commiseration. But it is not they alone who will suffer or whose misfortune must be deplored. Everybody in the country will suffer; with a diminished supply of credit all industries must curtail their production, all commercial activities must be restricted; and the infinite action and reaction of strain and depression and failure will start upon their interminable course.

With national interests of so vast a scope involved, the problem of how to deal with this season's cotton crop, just beginning to be picked and moved, is a national problem. A certain machinery for handling smoothly and efficiently each season's cotton production in the United States has been developed and perfected during the past generation; but that machinery now lies out of use and inoperative. The great cotton exchanges at home and abroad, through whose instrumentalities the cotton trade has both insured itself against ruinous losses and has also been able to take care of a present over-supply of cotton by contracting for its delivery in the future, are tight closed, and cannot possibly re-open until their members can find somehow and somewhere dependable ground under their feet. Spinners all over the world outside, and even to some extent within, the war zone in Europe would like to assure themselves for the future some supply of the cotton now so cheaply offered; but, on the one hand, they are fearful lest the American crop be left to take care of itself, on the basis of supply and demand for the surplus months of this disturbed year instead of for the annual or biennial consumptive periods, and, on the other hand, they cannot find cotton merchants in a position to contract with them for the delivery of the cotton. As a result of all this, cotton in the United States has to-day in its favor none of the ordinary tests of value. The cost of producing it is dismissed as of no importance. The average price it has brought for the past fifteen or twenty years is treated as a useless criterion of its intrinsic worth and as a misleading indication of the price it must bring as soon as the normal course of industry and commerce is entered upon again. Nothing is looked at but the sudden bulk of a supply of cotton which must be carried by somebody in the United States for a while, instead of being sold immediately and turned into a means of international credit, as people have become accustomed to see done.

The Administration at Washington has not been unmindful of this situation and of all its unhappy possibilities. Indeed, it could not have avoided giving it attention, if it would; for the predominance of the South in the present Congress and Government has made it certain that vast pressure would be brought to bear on the Administration and on the Congress to do something for the protection of the most vital of the interests of the cotton growing section of the country. So, after several preliminary conferences, Mr. McAdoo, Secretary of the Treasury, summoned to

Washington on Monday and Tuesday of this week a large gathering representative of important classes of persons concerned with cotton. The cotton producers were represented, the bankers of the South and of the reserve cities of the North were there in numbers, and many American cotton manufacturers were present. By no inadvertence, we are obliged to say, and as a mere afterthought, a few representatives of the cotton merchants of the country had also been invited. Mr. McAdoo announced at the start that he thought it desirable to bring together the three interests of chief importance in the matter of the marketing of the American cotton crop,—the producers, the bankers, and the manufacturers,—in order that they might discuss the serious problem of dealing with the sudden and unexpected situation that had arisen. He invited suggestions, first, from the producers; second, from the bankers; and, third, from the manufacturers. Of any desire to hear from the cotton merchants he said nothing.

Most of the discussion at the conference was utterly idle and most of the suggestions were vain. The predominant desire of the producers seemed to be that the Government should find a way for them to hold their cotton for a very high price (12 cents per pound was suggested), and at the same time provide money against it, upon which the producers could live as they have been accustomed to do for the past ten years or so. The manufacturers were generally eager for the farmers' prosperity, but thought that in respect of the price of cotton the law of supply and demand, in its sternest form, should be left to govern it. The Southern country bankers, especially the State bankers, desired access to plenty of money, partly for the wholly laudable purpose of being able to make the advances necessary for picking and ginning the crop, partly from the less praiseworthy desire of recouping themselves for the advances they have already made for the planting and cultivation of the crop. Of the metropolitan bankers, only one, Mr. Eldridge, of the National City Bank of New York, attempted a real contribution to the discussion, in the form of a genuinely constructive paper which we print on other pages to-day. The real word was always with the Secretary of the Treasury, who more than once stated with great decision of manner what the Government, acting under the Aldrich-Vreeland Act and, in the near future, through the National Reserve Bank System, is prepared to do. Perhaps it is well to give here in part a statement of Mr. McAdoo, issued the day after the close of the Conference, but embodying substantially what he said to that body. It is:

"Among the eligible securities to be used as a basis for the issue of currency I have decided to accept from national banks, through their respective national currency associations, notes, secured by warehouse receipts, for cotton or tobacco, and having not more than four months to run, at 75 per cent of their face value. The banks and the assets of all banks belonging to the currency associations will be jointly and severally liable to the United States for the redemption of such additional circulation, and a lien will extend to and cover the assets of all banks belonging to the association and to the securities deposited by the banks with the association, pursuant to the provisions of law, but each bank composing such association will be liable only in the proportion that its capital and surplus will bear to the aggregate capital and surplus of all such banks.

"This plan ought to enable the farmers to pick and market their cotton crop if the bankers, merchants, and cotton manufacturers will co-operate with each other and with the farmers, and will avail of the relief offered by the Treasury within reasonable limits. Such co-operation is earnestly urged upon all these interests. The farmer cannot expect as high a price for cotton this year because of the European war, yet he should not be forced to sacrifice his crop. The banker and the merchant should not exact excessive rates of interest, and the manufacturers should replenish their stocks as much as possible and pay reasonable prices for the product. If this is done—and it can be done if every one displays a helpful spirit—a normal condition can be restored and there ought to be no serious difficulty in taking care of the cotton problem. * * *

In all this there is one most glaring lack. All the talk of Mr. McAdoo,—and the same was true of the speakers at the Conference,—is of finding a way to hold cotton, to keep it off the market and yet to make it possible for the producer to obtain a loan upon it. Nothing whatever is said about finding a market for this accumulated cotton, either now or in the future. In the whole course of the Conference this subject was not once broached. To one familiar with the markets, therefore, the whole scheme took on the guise of a gigantic "bull" operation, the greatest ever undertaken in the world. And the market-wise know that there is but one outcome of such a plan. This outcome is liquidation, with all its accompanying loss. The accumulation in the hands of farmers or local merchants or even local banks, of the four to five million bales of cotton more than usual that are estimated to be unlikely to move into consumption during the coming year, assuredly means that every spinner in the world who has access to our cotton will buy from hand to mouth, assured that some day the great load will prove too heavy, the millions of bales must be liquidated at whatever price they will bring, and he can help himself to a large supply of cotton cheaper than he has bought for years.

Of course, the gross defect of the whole programme talked about in Washington and embodied in the statement of the Secretary of the Treasury is that it gives no part or place to the only class of persons in the country who are in a position to sell cotton; who alone can search out all over the world the consumers of cotton and get them not only to buy as much immediate cotton as possible, but also to contract for future supplies for years ahead, thus making a market, in the shape of future contracts bought as hedges, for great quantities of distress cotton now pressing upon reluctant buyers; who by means of their own credit and that of the multitude of persons connected with them directly or indirectly all over the world, can take care of the over-plus of this crop and more, carrying it along until it is needed for consumption somewhere. It is unnecessary to say that this class of persons is that of the cotton-merchants, the men who have come to know, through years of experience and accumulated wisdom, what the intrinsic value of cotton is, as contrasted with its momentary "cash value," to use a phrase of the National Banking Act.

There is one thing, and only one thing, that the cotton merchants need to know in order that they should undertake the task of carrying and distributing so much of the present cotton crop as the producers or owners do not desire to carry for themselves. This one thing is some assurance from bankers, working in co-operation with the Treasury

Department, that for the next twelve to eighteen months, cotton shall be given the same kind of loaning value, as contrasted with "cash value," which thousands of millions of securities are now having given to them by the bankers themselves, with the acquiescence of the Treasury Department. It is now an economic fact, established by the most expert economic authority, confirmed by the most scientific cotton culture, and conclusively affirmed by the prices which have prevailed for cotton during the last fifteen or more years, that the cost of production of the normal world's requirements of American cotton is well above 10 cents per pound on the farms. Here is a criterion of real value infinitely superior to any criterion that can be applied to any security, however good it may appear. It is not wild-cat banking, but property banking (infinitely sounder than evidence of debt banking), to use such a criterion for determining the loaning value of a necessity of life, such as cotton is. If twenty per cent be taken off this cost of production and a loaning value of 8 cents a pound be agreed upon by bankers and Government alike, the cotton merchants of this and other countries will instantly become on the alert for business, will begin to find outlets for the excess cotton, will induce commitments for it running years into the future, and will in no short time take upon themselves the entire burden, in so far as it is desired to place it there.

The Full Text of the United States Cotton Futures Act

COMMONLY KNOWN AS THE LEVER ACT

TOGETHER WITH AN ANALYSIS OF THE ACT IN RESPECT OF ITS LEGAL MEANING AND ITS EFFECT UPON THE COTTON TRADE OF THE UNITED STATES

By Arthur Richmond Marsh

TEXT OF THE ACT.

[S. 110.]

AN ACT to tax the privilege of dealing on exchanges, boards of trade, and similar places in contracts of sale of cotton for future delivery, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act shall be known by the short title of the "United States cotton futures Act."

Sec. 2. That, for the purposes of this Act, the term "contract of sale" shall be held to include sales, agreements of sale, and agreements to sell. That the word "person," wherever used in this Act, shall be construed to import the plural or singular, as the case demands, and shall include individuals, associations, partnerships, and corporations. When construing and enforcing the provisions of this Act, the act, omission, or failure of any official, agent, or other person acting for or employed by any association, partnership, or corporation within the scope of his employment or office, shall, in every case, also be deemed the act, omission, or failure of such association, partnership, or corporation as well as that of the person.

Sec. 3. That upon each contract of sale of any cotton for future delivery made at, on, or in any exchange, board of trade, or similar institution or place of business, there is hereby levied a tax in the nature of an excise of 2 cents for each pound of the cotton involved in any such contract.

Sec. 4. That each contract of sale of cotton for future delivery mentioned in section three of this Act shall be in writing plainly stating, or evidenced by written memorandum showing, the terms of such contract, including the quantity of the cotton involved and the names and addresses of the seller and buyer in such contract, and shall be signed by the party to be charged, or by his agent in his behalf. If the contract or memorandum specify in bales the quantity of the cotton involved, without giving the weight, each bale shall, for the purposes of this Act, be deemed to weigh five hundred pounds.

Sec. 5. That no tax shall be levied under this Act on any contract of sale mentioned in section three hereof, if the contract comply with each of the following conditions:

First. Conform to the requirements of section four of, and the rules and regulations made pursuant to, this Act.

Second. Specify the basis grade for the cotton involved in the contract, which shall be one of the grades for which standards are established by the Secretary of Agriculture except grades prohibited from being delivered on a contract made under this section by the fifth subdivision of this section, the price per pound at which the cotton of such basis grade is contracted to be bought or sold, the date when the purchase or sale was made, and the month or months in which the contract is to be fulfilled or settled: *Provided*, That middling shall be deemed the basis grade incorporated into the contract if no other basis grade be specified either in the contract or in the memorandum evidencing the same.

Third. Provide that the cotton dealt with therein or delivered thereunder shall be of or within the grades for which standards are established by the Secretary of Agriculture except grades prohibited from being delivered on a contract made under this section by the fifth subdivision of this section and no other grade or grades.

Fourth. Provide that in case cotton of grade other than the basis grade be tendered or delivered in settlement of such contract, the differences above or below the contract price which the receiver shall pay for such grades other than the basis grade shall be the actual commercial differences, determined as hereinafter provided.

Fifth. Provide that cotton that, because of the presence of extraneous matter of any character or irregularities or defects, is reduced in value below that of Good Ordinary, or cotton that is below the grade of Good Ordinary, or, if tinged, cotton that is below the grade of Low Middling, or, if stained, cotton that is below the grade of Middling, the grades mentioned being of the official cotton standards of the United States, or cotton that is less than seven-eighths of an inch in length of staple, or cotton of perished staple or of immature staple, or cotton that is "gin cut" or reginned, or cotton that is "repacked" or "false packed" or "mixed packed" or "water packed," shall not be delivered on, under, or in settlement of such contract.

Sixth. Provide that all tenders of cotton under such contract shall be the full number of bales involved therein, except that such variations of the number of bales may be permitted as is necessary

to bring the total weight of the cotton tendered within the provisions of the contract as to weight; that, on the fifth business day prior to delivery, the person making the tender shall give to the person receiving the same written notice of the date of delivery, and that, on or prior to the date so fixed for delivery, and in advance of final settlement of the contract, the person making the tender shall furnish to the person receiving the same a written notice or certificate stating the grade of each individual bale to be delivered and, and by means of marks or numbers, identifying each bale with its grade.

Seventh. Provide that, in case a dispute arises between the person making the tender and the person receiving the same, as to the quality, or the grade, or the length of staple, of any cotton tendered under the contract, either party may refer the question to the Secretary of Agriculture for determination, and that such dispute shall be referred and determined, and the costs thereof, fixed, assessed, collected and paid, in such manner and in accordance with such rules and regulations as may be prescribed by the Secretary of Agriculture.

The provisions of the third, fourth, fifth, sixth, and seventh subdivisions of this section shall be deemed fully incorporated into any such contract if there be written or printed thereon, or on the memorandum evidencing the same, at or prior to the time the same is signed, the phrase, "Subject to United States cotton futures Act, section five."

The Secretary of Agriculture is authorized to prescribe rules and regulations for carrying out the purposes of the seventh subdivision of this section, and his findings, upon any dispute referred to him under said seventh subdivision, made after the parties in interest have had an opportunity to be heard by him or such officer, officers, agent, or agents of the Department of Agriculture as he may designate, shall be accepted in the courts of the United States in all suits between such parties, or their privies, as prima facie evidence of the true quality, or grade, or length of staple of the cotton involved.

Sec. 6. That for the purposes of section five of this Act the differences above or below the contract price which the receiver shall pay for cotton of grades above or below the basis grade in the settlement of a contract of sale for the future delivery of cotton shall be determined by the actual commercial differences in value thereof upon the sixth business day prior to the day fixed, in accordance with the sixth subdivision of section five, for the delivery of cotton on the contract, established by the sale of spot cotton in the market where the future transaction involved occurs and is consummated if such market be a bona fide spot market; and in the event there be no bona fide spot market at or in the place in which such future transaction occurs, then, and in that case, the said differences above or below the contract price which the receiver shall pay for cotton above or below the basis grade shall be determined by the average actual commercial differences in value thereof, upon the sixth business day prior to the day fixed, in accordance with the sixth subdivision of section five, for the delivery of cotton on the contract, in the spot markets of not less than five places designated for the purpose from time to time by the Secretary of Agriculture, as such values were established by the sales of spot cotton, in such designated five or more markets: *Provided*, That for the purposes of this section such values in the said spot markets be based upon the standards for grades of cotton established by the Secretary of Agriculture; *And provided further*, That whenever the value of one grade is to be determined from the sale or sales of spot cotton of another grade or grades, such value shall be fixed in accordance with rules and regulations which shall be prescribed for the purpose by the Secretary of Agriculture.

Sec. 7. That for the purposes of this Act the only markets which shall be considered bona fide spot markets shall be those which the Secretary of Agriculture shall, from time to time, after investigation, determine and designate to be such, and of which he shall give public notice.

Sec. 8. That in determining, pursuant to the provisions of this Act, what markets are bona fide spot markets, the Secretary of Agriculture is directed to consider only markets in which spot cotton is sold in such volume and under such conditions as customarily to reflect accurately the value of middling cotton and the differences between the prices or values of middling cotton and of other grades of cotton for which standards shall have been established by the Secretary of Agriculture: *Provided*, That if there be not sufficient places, in the markets of which are made bona fide sales of spot cotton of grades for which standards are established by the Secretary of Agriculture, to enable him to designate at least five spot markets in accordance with section six of this Act, he shall, from data as to spot sales collected by him, make rules and regulations for determining the actual commercial differences in the value of spot cotton of the grades established by him as reflected by bona fide sales of spot cotton, of the same or different grades, in the markets selected and designated by him, from time to time, for that purpose, and in that event, differences in value of cotton of various grades involved in contracts made pursuant to section five of this Act shall be determined in compliance with such rules and regulations.

Sec. 9. That the Secretary of Agriculture is authorized, from time to time, to establish and promulgate standards of cotton by which its quality or value may be judged or determined, including its grade, length of staple, strength of staple, color, and such other qualities, properties, and conditions as may be standardized in practical form, which, for the purposes of this Act, shall be known as the "Official cotton standards of the United States," and to adopt, change, or replace the standard for any grade of cotton established under the Act making appropriations for the Department of Agriculture for the fiscal year ending June thirtieth, nineteen hundred and nine (Thirty-fifth Statutes at Large, page two hundred and fifty-one), and Acts supplementary thereto: *Provided*, That any standard of any cotton established and promulgated under this Act by the Secretary of Agriculture shall not be changed or replaced within a period less than one year from and after the date of the promulgation thereof by the Secretary of Agriculture: *Provided further*, That, subsequent to six months after the date section three of this Act becomes effective, no change or replacement of any standard of any cotton established and promulgated under this Act by the Secretary of Agriculture shall become effective until after one year's public notice thereof which notice shall specify the date when the same is to become effective. The Secretary of Agriculture is authorized and directed to prepare practical forms of the official cotton standards which shall be established by him, and to furnish such practical forms from time to time, upon request, to any person, the cost thereof, as determined by the Secretary of Agriculture, to be paid by the person requesting the same, and to certify such practical forms under the seal of the Department of Agriculture and under the signature of the said Secretary, thereto affixed by himself or by some official or employe of the Department of Agriculture thereunto duly authorized by the said Secretary.

Sec. 10. That no tax shall be levied under this Act on any contract of sale mentioned in section three hereof, if the contract comply with each of the following conditions:

First. Conform to the rules and regulations made pursuant to this Act.

Second. Specify the grade, type, sample, or description of the cotton involved in the contract, the price per pound at which such cotton is contracted to be bought or sold, the date of the purchase or sale, and the time when shipment or delivery of such cotton is to be made.

Third. Provide that cotton of or within the grade or of the type, or according to the sample or description, specified in the contract shall be delivered thereunder, and that no cotton which does not conform to the type, sample, or description, or which is not of or within the grade, specified in the contract shall be tendered or delivered thereunder.

Fourth. Provide that the delivery of cotton under the contract shall not be effected by means of "set-off" or "ring" settlement, but only by the actual transfer of the specified cotton mentioned in the contract.

The provisions of the first, third, and fourth subdivisions of this section shall be deemed fully incorporated into any such contract if there be written or printed thereon, or on the document or memorandum evidencing the same, at or prior to the time the same is entered into, the words "Subject to United States cotton futures Act, section ten."

This Act shall not be construed to impose a tax on any sale of spot cotton.

This section shall not be construed to apply to any contract of sale made in compliance with section five of this Act.

Sec. 11. That upon each order transmitted, or directed or authorized to be transmitted, by any person within the United States for the making of any contract of sale of cotton grown in the United States for future delivery in cases in which the contract of sale is or is to be made at, on, or in any exchange, board of trade or similar institution or place of business in any foreign country, there is hereby levied an excise tax at the rate of 2 cents for each pound of the cotton so ordered to be bought or sold under such contract: *Provided,* That no tax shall be levied under this Act on any such order if the contract made in pursuance thereof comply either with the conditions specified in the first, second, third, fourth, fifth, and sixth subdivisions of section five, or with all the conditions specified in section ten of this Act, except that the quantity of the cotton involved in the contract may be expressed therein in terms of kilograms instead of pounds.

Sec. 12. That the tax imposed by section three of this Act shall be paid by the seller of the cotton involved in the contract of sale, by means of stamps which shall be affixed to such contracts, or to the memoranda evidencing the same, and canceled in compliance with rules and regulations which shall be prescribed by the Secretary of the Treasury. The tax imposed by section eleven of this Act shall be paid by the sender of the order and collected in accordance with rules and regulations which shall be prescribed by the Secretary of the Treasury.

Sec. 13. That no contract of sale of cotton for future delivery mentioned in section three of this Act which does not conform to the requirements of section four hereof and has not the necessary stamps affixed thereto as required by section twelve hereof shall be enforceable in any court of the United States by, or on behalf of, any party to such contract or his privies. That no contract of sale of cotton for future delivery, made in pursuance of any order mentioned in section eleven of this Act shall be enforceable in any court of the United States by or on behalf of any party to such contract or his privies unless it conforms to the requirements of section four hereof and the tax imposed by section eleven upon the order for such contract shall have been paid in compliance with section twelve of this Act.

Sec. 14. That the Secretary of the Treasury is authorized to make and promulgate such rules and regulations as he may deem necessary to collect the tax imposed by this Act and otherwise to enforce its provisions. Further to effect this purpose, he shall require all persons coming within its provisions to keep such records and statements of account as will fully and correctly disclose all transactions mentioned in sections three and eleven of this Act; and he may appoint agents to conduct the inspection necessary to collect said tax and otherwise to enforce this Act and all rules and regulations made by him in pursuance hereof, and may fix the compensation of such agents.

Sec. 15. That any person liable to the payment of any tax imposed by this Act who fails to pay, or evades or attempts to evade the payment of such tax, and any person who otherwise violates any provision of this Act, or any rule or regulation made in pursuance hereof, shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be fined not less than $100 nor more than $20,000, in the discretion of the court; and, in case of natural persons, may, in addition, be punished by imprisonment for not less than sixty days nor more than three years, in the discretion of the court.

Sec. 16. That in addition to the foregoing punishment there is hereby imposed, on account of each violation of this Act, a penalty of $2,000, to be recovered in an action founded on this Act in the name of the United States as plaintiff, and when so recovered one-half of said amount shall be paid over to the person giving the information upon which such recovery was based. It shall be the duty of United States attorneys, to whom satisfactory evidence of violations of this Act is furnished, to institute and prosecute actions for the recovery of the penalties prescribed by this section.

Sec. 17. That no person whose evidence is deemed material by the officer prosecuting on behalf of the United States in any case brought under any provision of this Act shall withhold his testimony because of complicity by him in any violation of this Act or of any regulation made pursuant to this Act, but any such person called by such officer who testifies in such case shall be exempt from prosecution for any offense to which his testimony relates.

Sec. 18. That the payment of any tax levied by this Act shall not exempt any person from any penalty or punishment now or hereafter provided by the laws of any State for entering into contracts of sale of cotton for future delivery, nor shall the payment of any tax imposed by this Act be held to prohibit any State or municipality from imposing a tax on the same transaction.

Sec. 19. That there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, for the fiscal year ending June thirtieth, nineteen hundred and fifteen, the sum of $50,000 or so much thereof as may be necessary to enable the Secretary of the Treasury to carry out the provisions of this Act.

Sec. 20. That there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, available until expended, the sum of $150,000 or so much thereof as may be necessary to enable the Secretary of Agriculture to make such investigations, to collect such data, and to use such methods and means as he may deem necessary to determine and designate what are bona fide spot markets within the meaning of this Act, to prescribed rules and regulations pursuant to sections five, six, and eight hereof, to establish and promulgate standards for cotton and to furnish practical forms thereof as authorized by section nine hereof, to publish the results of his investigations, to pay rent and to employ such persons as he may deem necessary, in the city of Washington and elsewhere. The Secretary of Agriculture is hereby directed to publish from time to time the results of investigations made in pursuance of this Act. All sums collected by the Secretary of Agriculture as

costs under section five, or for furnishing practical forms under section nine of this Act, shall be deposited and covered into the Treasury as miscellaneous receipts.

Sec. 21. That sections nine, nineteen, and twenty of this Act and all provisions of this Act authorizing rules and regulations to be prescribed shall be effective immediately. All other sections of this Act shall become and be effective on and after six months from the date of the passage of this Act: *Provided*, That nothing in this Act shall be construed to apply to any contract of sale of any cotton for future delivery mentioned in section three of this Act which shall have been made prior to the date when section three becomes effective.

Approved, August 18, 1914.

ANALYSIS.

Title and Enacting Clause.—In form, the Act is to tax certain business transactions made by citizens of the United States or by foreigners who are within the United States at the time they enter into the specified transactions. In reality, as was repeatedly stated by the proponents of the measure, both in the Senate and in the House of Representatives, the purpose of the Act is not to raise revenue by taxation, but to regulate the business and commerce in cotton, in so far as this is conducted in connection with cotton exchanges. The tax fixed by the law on the transactions deemed undesirable is therefore prohibitive in amount; and this too was openly stated by the proponents of the measure and was acquiesced in by both Houses of Congress without demur from any member of either body.

Sec. 2. The tax established by the Act is only upon contracts of sale, and not upon contracts of purchase. The seller of a contract declared by the law to be taxable must therefore always pay the tax; but the purchaser of the same contract will have no tax to pay, unless he resells the contract. If he takes delivery of the cotton, his contract of purchase is tax-free.

As the tax is imposed not upon persons, but on the contracts of sale (Sec. 3) made by persons, the penalties provided by the Act are imposable or, in the case of fines, collectible, in respect only of the principals to the contracts or in respect of certain specified agents of such principals. Thus in the last sentence of the present section it would appear to be provided that, while agents or other persons acting for any association, partnership or corporation are liable to the penalties provided in case of their failure to pay to tax or to fulfil any other requirements of the Act in connection with future contracts, the agents of individuals are not so liable. This will certainly raise the complex and difficult question of the legal character of the relation between the brokers or commission houses making contracts upon cotton exchanges and individuals for whom they may make the contracts. If the brokers are commission houses are in a legal sense purely agents of these individual customers, it would seem that they are not subject to the penalties of the law, whatever may be the liability of the individuals for whom they act, whether as to the tax or as to the penalties provided. Another important question, which is the corrollary to the previous one, is whether the true principals,—i. e. the customers whose orders are executed by brokers or commission houses,—are liable to any tax or subject to any penalties, no matter what the brokers and commission houses may do or omit to do in meeting the provisions of the Act.

Sec. 3. As this is on its face taxing legislation, the amount of the general and uniform tax to be levied must be specified, as is done in this section. The cases of remission of the tax, when the contracts are of a form approved by Congress, are enumerated for cotton futures contracts proper in Section 5, and for contracts for the future delivery of specific lots of cotton in Section 10. In the present section the critical phrase is really found in the words: "at, on, or in any exchange, board of trade of similar institution or place of business." It has been generally assumed that the words "at, on, or in any exchange, board of trade or similar institution or change. These words, however, have frequently been used in statutes dealing with other matters, such as unlawful assemblies, and the like. It is a rule of both administrative and judicial interpretation of a statute that where a phrase has been frequently used in statutes and construed by the courts, the thus established interpretation will be followed in the case of new statutes. Now the phrase "at, on, or in" has frequently been construed (in strike injunction cases, for example) to mean not the distinctly mentioned building, piece of land, room or place of assemblage, but these with all adjacent places and property or with all places and property having a definite connection with the places and property mentioned. It is then virtually certain that the phrase "at, on, or in any exchange, etc.," will not be construed either administratively or judicially to mean the trading floor or ring of any given exchange, but rather to include the entire vicinage, in so far as trading in cotton may be conducted there in accordance with the rules of the exchange. It would obviously be absurd for a member of an exchange to be able to make contracts without tax on the sidewalk outside the exchange or even in his own office close by the exchange, when the tax would be imposed on the same contracts, if they were made a few feet away, on the "floor" or at the trading "ring" or "post" of the exchange. Where members of an exchange have offices in the exchange building itself as is largely the case in New York, New Orleans, Memphis, Liverpool, Bremen, Havre and elsewhere, it may be regarded as indubitable that future contracts made by such members between themselves or with outsiders in their offices will be completely covered by the terms of the Act. This is true both of future contracts such as are made on the New York and New Orleans exchanges, but also of the "f. o. b." contracts and "to arrive" contracts covering specific lots of cotton, such as are dealt in by members of the interior exchanges, like Memphis, Houston, Augusta, etc., or by certain classes of members of the exchanges at Southern ports, like New Orleans. Galveston, Savannah, Norfolk, etc.,—these latter contracts being those provided for in Section 10 of the Act. It is even not impossible that under this interpretation associations of cotton spinners, like the Arkwright Club in Boston and the Southern cotton manufacturers' associations, which have fixed headquarters, and operate under agreed-upon rules as to the future delivery of actual cotton to their members may be held to be "exchanges, boards of trade, or similar institutions or places of business," within the terms of the Act.

Sec. 4. The portion of this section of greatest consequence to the cotton trade is that requiring future contracts made "at, on, or in exchanges, etc.," to be in writing and to show among other things the names and addresses of the seller and buyer in such contract, and to be signed by the party to be charged or by his agent in his behalf. These requirements bring up in inescapable fashion the still unadjudicated legal question of the status of the broker or commission house in relation to the customer. Is the broker or commission house the agent of the customer, making the contract in his behalf and for his account and risk? The courts have never answered this question, so far as the writer knows. If the relation of pure agency is the legally true one, then the broker or commission house may sign the contract in behalf of the customer, giving his name and address. If the relation is not that of pure agency,

then in some fashion it must be decided whether or not the broker or commission house is a principal both ways, i. e. on the one side to the customer and on the other to the person who takes the other side of the contract. It is to be observed that this section of the Act applies just as much to "f. o. b." brokers, who are members of exchanges and conduct their business "at, on, or in exchanges" of any kind (i. e. Memphis and Augusta, as well as New York and New Orleans), as to brokers and commission houses doing business on the futures exchanges proper (i. e. New York or New Orleans).

Sec. 5. This section deals exclusively with the provisions that must be embodied in the future contract forms of the futures exchanges proper, if there is to be remission of the prohibitive tax of $10 per bale on all sales of contracts. The exempted form of contract must be a "basis" contract, and the "basis" grade must be one of the grades known as the Government standard grades, with Middling presumed, if there be no specification of the "basis" grade. The cotton covered by the contract must be "of or within" the grades for which standards are established by the Secretary of Agriculture, except certain prohibited grades. The language "of or within" may safely be taken to authorize a finer sub-division of the grades deliverable than the bare nine standard grades as yet promulgated by the Secretary of Agriculture. As grades only, and not color ,are determining, there is no prohibition of the delivery of tinged and stained cottons, except to the extent provided in subdivision Fifth of this Section. Further, the contract must provide that the different grades of cotton, whether white, tinged or stained, shall be valued at the time of delivery at differences above and below the "basis" grade determined in a specified manner, described in detail in Sections 6 to 8 of the Act, in accordance with the going, or "commercial," valuations of such grades at the time of delivery. Only differences of value for grade are permissible, as the price at which the receiver is entitled to receive his cotton is the price of the "basis" grade, plus or minus the "commercial" difference or differences for the grade or grades actually delivered to him. Allowances for quality or staple are impossible under the system provided, and this is one of the chief reasons why the foreign markets, like Liverpool, where great quantities of staple cotton are dealt in, can never adopt the form of contract specified in this Act. In only one respect does staple come into question in the Act, and that is in the prohibition of the delivery of cotton of less than seven-eighths of an inch in length of staple. This provision was procured by a group of Southern cotton spinners, desirous of compelling farmers in their States to raise cotton of a longer staple than they are now doing. The practical result will be that either these farmers must substitute a less profitable for a more profitable cotton in their planting, or else every drought year will see several million bales of Upland Cotton outlawed from the contract markets. This will, of course, occasion a violent rise in prices in the futures markets; and Southern spinners who have bought large quantities of the cotton of their districts "on call" from merchants, will be called upon to pay exorbitant prices for inferior cotton.

Sub-divisions six and seven of this Section form a curious illustration of legislation which will produce exactly the opposite effect from that intended. It was one of the expressed purposes of the proponents of this Act to do away with the use of *pro forma* bills in connection with deliveries of cotton on the exchanges. These two sub-divisions, taken together, not only legalize but virtually compel the use of the *pro forma* bill. They make it necessary to bring the receiver and the deliverer of cotton on a contract directly together, and make impossible the continuation of the system of having the grade of cotton certified by a disinterested committee or board of classification, who determine, independently of the buyer and the seller, the grade of cotton delivered on future contracts. Provision is made for the delivery by the deliverer to the receiver "of a written notice or certificate" of the grade or grades of the cotton which the former will deliver to the latter under his contract. But provision is also made for the determination of disputes between the deliverer and the receiver; and no mention is made of any outside party, like a Classification Committee, as having any interest or rights in the dispute. Under these conditions the maintenance of a Classification Committee, entrusted with the authoritative and final certification of cotton, would not only be idle, but would certainly prejudice the interests of the parties to the dispute. Nothing remains, then, except that the deliverer must give to the receiver a "notice" of the grades of cotton he intends to deliver, and that the receiver, if dissatisfied, to refer the question to the Secretary of Agriculture. Naturally, the deliverer will bill the cotton to the receiver in accordance with the former's notice, but with the provision that differences arising under the decision of the Secretary of Agriculture shall later be adjusted. This is the *pro forma* bill in its most pronounced fashion.

A peculiarity of Sub-division 7 of this Section of the Act is that it is the only instance in American legislation, so far as the writer knows, in which an administrative officer of the Government has been given power to determine disputes arising between citizens.

Sections 6, 7, 8. The only comment necessary upon these sections is that in a cumbersome and circuitous way they reach the simple result that the Secretary of Agriculture must himself determine and promulgate the "commercial differences" for the different grades of cotton deliverable upon future contracts proper. The entire matter about "bona fide spot markets" is idle verbiage, because there are not in the United States five markets "in which spot cotton is sold in such volume and under such conditions as customarily to reflect accurately the value of middling cotton and the differences between the prices or values of middling cotton and of other grades of cotton for which standards shall have been established by the Secretary of Agriculture." There is not one such market. During the past six months, for instance, there has not been a single market in the United States in which the value of good middling cotton, as compared with middling, was reflected at all, to say nothing of "customarily." The fact is that the Secretary of Agriculture will be forced to employ the last of the alternatives provided, and to arrive at the "commercial differences" for the different grades by extensive investigations of actual sales of cotton all over the South. It is well that Section 20 of the Act requires him "to publish from time to time the results of investigations made in pursuance of this Act." It is obvious that, in spite of all the circumlocutions in which the grant of power is enwrapped, these Sections authorize the Secretary of Agriculture to fix the price, relatively if not absolutely, for far the greater part of one of our chief commodities.

Sec. 10. The purpose of this Section of the Act is to bring under the provisions of the law what the report on the amended bill to the House of Representative designated as transactions in actual cotton of a "semi-future character," such as f. o. b. sales, sales of cotton "to arrive," and the like. In actual effects it is, however, likely to prove one of the most far-reaching and disturbing of all the provisions of the Act. It extends the prohibitive tax of $10 per bale to a multitude of transactions in actual cotton, with which the futures exchanges proper have no concern. The brokers and dealers in "f. o. b." cotton, for example, are chiefly located at places where there are exchanges, boards of trade or similar institutions, such as Memphis, Houston, Galveston, Savannah, not

to speak of the great centre of these transactions, New Orleans. These brokers and dealers are almost universally members of these exchanges or boards of trade, and deal under their rules. Hence transactions with them are made "at, on, or in" exchanges, etc., in the sense of Section 3, as explained above. Consequently, every country merchant, cotton dealer or farmer who sells to these brokers or dealers some "f. o. b." cotton or cotton "to arrive" is brought within the Act, and must pay a tax of $10 per bale, unless he conforms, both in form of contract and in performance thereof, with the requirements of the present Section. Every American shipper who sells cotton to a merchant in Liverpool or Bremen, subject to the arbitration rules of those exchanges, is almost unquestionably liable to the tax. It is even possible that the shipper who sells cotton for forward delivery to a member of the Arkwright Club or other similar association in New England or to a member of the Southern Cotton Manufacturers' Association, unless those bodies completely change their rules, is similarly liable. The most common practices in the trade in actual cotton must be abandoned in these cases, or the prohibitive tax attaches. There must be no departure whatever from the grades sold; substitutions, even by mutual consent, cannot be made without payment of the tax. Reselling of contracts and settlement of differences on such resales automatically brings the payment of the tax. Nor does relief from the tax come from the provision that: "This Act shall not be construed to impose a tax on any sale of spot cotton"; for "spot cotton," according to commercial usage, which will be followed by the courts, is cotton actually "on the spot," i. e. in the very place where the sale and purchase are made. A sale of a specific lot of cotton in Little Rock for delivery in Memphis is not in the eye of the law a sale of "spot cotton." Hence it is easy to see what surprises and what bitter recriminations will be occasioned by the discovery all over the Cotton Belt of the full significance of this Section of the Act.

Sec. 11. It was the intention of the proponents of the Act to prevent, through the provisions of this Section, the resort of American cotton speculators to the foreign exchanges, in order to continue their operations free from the restrictions imposed upon those making future contracts on the American exchanges. What the Section actually does, however, is to cut off Americans and persons resident in the United States, other than mere buying agents of foreign firms, from participation in the greater part of the export business in cotton from this to foreign countries. The Section also introduces a vast, new hazard into all operations on the American exchanges. Both kinds of business, that in future contracts proper and that in contracts of sale for the delivery of specific lots of cotton in the chief foreign markets, are affected. It is impossible for the foreign exchanges to make their forms of contract conform to the provisions of the Act; the nature of their business absolutely precludes this. Consequently, every person within the United States who buys some cotton and sends an order to Liverpool, or Bremen or Havre must pay the tax of $10 per bale,—unless as has been said, he is a mere buying agent of a foreign firm, which cables him orders and prices for the purchase of cotton and receives in return from him mere reports of his purchases. Orders for the sale of hedges in Liverpool, Bremen or Havre are obviously under the terms of this Section and call for the payment of the tax. But orders for the sale and future delivery of specific lots of American cotton in these markets,—the most important in Europe,—likewise involve the payment of the tax. The merchants of Bremen virtually all have their offices in the Baumwollbörse, or Cotton Exchange, and buy only in accordance with the rules of that exchange. The great majority of the merchants in Liverpool are similarly situated, and the same is true of Havre. Moreover, sales of cotton to spinners made through these merchants are for the most part consummated in the exchange buildings and in accordance with the exchange rules. They are certainly of precisely the character to require the payment of the tax imposed upon transactions of a future or semi-future kind described in this Act. Another consequence of this Section, doubtless little dreamed of by its framers, is that prices on the American exchanges will be subject to sudden plunges of a very severe kind. The whole theory of the cotton business is the distribution of the burden over the entire world; but particular markets from time to time become somewhat overloaded, and some of the superfluous contracts must be sold out, in order to relieve the situation there. Hitherto, it has been the habit of arbitrageurs, when these selling movements occurred on the American exchanges, to buy the cotton offered for sale and to resell it on the foreign markets. Under this Act, however, it will be impossible for American cotton dealers to do this until the decline on this side has gone far enough not only to give them their profit but also the $10 per bale which they must pay as a tax on their foreign sales. This will mean that several times a year prices on the American exchanges will drop perpendicularly over $10 per bale, or else that prices on the American exchanges will rule normally some $10 per bale, relatively to prices on the foreign exchanges, than they have hitherto done. Of course, all holders of hedge contracts on the American exchanges will be painfully shocked in the former case; and, in the latter, the great aim of the advocates of regulatory legislation for the American cotton exchanges,—i. e. to keep the prices quoted on these exchanges as high as possible, in order that the price of middling cotton in the South correspondingly high,—will be nullified.

Sections 12, 13, 14. No particular comment upon these Sections is called for, beyond calling attention to the fact that the provision in Section 14, with reference to the authority of the Secretary of the Treasury to compel the keeping of books of record, is so drawn that in all probability the Secretary of the Treasury has no authority at all in respect of the keeping of records by persons making contracts of sale in conformity with the requirements of Section 5 and Section 10 of the Act. If the American exchanges adopt forms of contract embodying the provisions of these Sections, it is probable that no person trading on those exchanges can be compelled to keep any records at all or to disclose them to the Secretary of the Treasury, if he does keep them. The language of the first paragraph of Section 5 and of the first paragraph of Section 10 is ambiguous in relation to the language of Section 3; but it is probable that the non-taxable contracts of Sections 5 and 10 are by the language employed completely segregated from the taxable contracts of Section 3, except for the mere description of the place "at, on, or in" which the contracts are made.

Sections 15, 16, 17, 18, 19, 20. These penalty and appropriation Sections of the Act require no comment.

Section 21. The only matter of remark in connection with the time appointed for the going into effect of the Act, as respects those who deal in cotton, is that the totally abnormal and deeply perturbed conditions of the present time will be made much more serious for the entire American cotton trade by reason of the fact that February, 1915, will undoubtedly mark the most acute stage of the accumulated and unsold surplus of this season's cotton crop. Much that American cotton merchants might do to mitigate the pressure and ameliorate the situation, they will be precluded from doing by the restrictions and uncertainties imposed upon them by this Act, and by the necessity of learning its true significance for them, when they should be devoting their undistracted efforts to finding a market for the burden of cotton which the country will have on its hands.

INSURANCE

Articles on the Theory, Practice and Experience of Insurance.

Notes on Insurance, American and Foreign.

Items of Insurance News.

ACCORDING to present appearances the managers of our fire insurance companies are going to have some pretty tough nuts to crack during the next five or six months, and perhaps for longer still. At first sight it would not seem probable that the European War would raise important questions about the insurance against fire of property in the United States. Yet one such question is already beginning to emerge. As readers of this paper know, the problem of dealing with the American cotton crop of this season, so as to avoid ruinous losses to the producers who made it, the bankers who have loaned on it and the merchants who must deal in it, is engaging the attention of the Administration, in Washington and of a multitude of persons nearly concerned. We consume only about 40 per cent of it at home and export about 60 per cent. Upon this 60 per cent we depend to settle our accrued international indebtedness once a year, instead of remitting gold. Not to be able to sell it means not only all kinds of embarrassments in our international financial relations, but much disturbance of our domestic credit situation; for when we do not pay our debts with cotton, we must pay them in a medium which, if kept at home, means some six times its own value in credits possible for our business men, manufacturers, farmers, and so forth. It looks now, however, as if for at least six months to come we shall be able to export less than one-half of what we customarily export in the corresponding period of normal years. It has been estimated by expert students of the cotton situation that out of the cotton crop just beginning to be picked we shall have to retain in the United States fully 4,500,000 bales, and possibly 5,000,000 bales or more, which we had expected to send abroad, thus getting it off our hands and receiving the money or the foreign credits representing its value. It is easy to see the financial disturbances that will result from such an unexpected and unprepared-for state of things. The Secretary of the Treasury, Mr. McAdoo, has been holding conferences of cotton producers, bankers and cotton manufacturers this very week to discuss the subject, and no definitive conclusions have as yet been come to with regard to that side of the matter.

One point, however, has come out very clearly in the discussions, and that is that the proposal receiving predominant favor is to have the Government and the bankers make it possible for the producers and the country merchants to hold this surplusage of cotton over until normal commercial and financial conditions are restored, whether through a cessation of the European war, or through England's getting complete mastery of the seas and making it possible to ship cotton to all the European countries except Germany and Austria-Hungary. And necessarily incident to this proposal is the warehousing of cotton in the Southern States, and perhaps in places like New York City, on a scale never before witnessed in this country. All the available warehouses and compresses will be filled with cotton; and at the meeting of Secretary McAdoo's Conference in Washington on Monday last numerous schemes for extemporized warehouses were propounded, such as light sheds roofed with tin or galvanized iron; mere enclosures surrounded by barbed wire fencing in which the cotton could be placed on skids and covered with tarpaulins; empty freight-houses and even unused freight cars; and the like. Secretary McAdoo has announced that he is ready to treat notes secured by warehouse receipts for cotton as securities for currency under the Aldrich-Vreeland Emergency Currency Act. Of the warehouses and the warehouse receipts he has spoken as follows in a statement published on Thursday:

"It is not my purpose to prescribe the character of the warehouses in which cotton and tobacco may be stored. The banks will be relied upon to see that warehouse receipts issued by responsible warehousemen or warehouse companies alone are accepted and that the cotton and tobacco stored in such warehouses are covered by adequate fire insurance and are protected against injury by the elements."

It is at this point that fire insurance comes into the matter. In all the discussions it has been assumed that fire insurance on cotton is as easily and naturally obtainable as are air and water. So far as we know, not a single fire insurance company has been asked whether it proposes to insure without limit and at the same rates as before this added mass of cotton which is to be held in these warehouses,—let us say, 5,000,000 bales more than ever before, worth, even at the decreased prices, some $150,000,000 to $200,000,000.

It goes without saying that both the actual fire risk and the moral hazard are going to be greatly increased by the crowding of this vast quantity of cotton into the totally inadequate warehouses of the South and of the Eastern seaboard. The fire risk will be increased by the congestion, by the fact that the cotton is not being continually handled in and out, as under normal conditions, and the inevitable use of unsuitable and unprotected portions of warehouses, whether regular or improved, for the storage of much of the cotton. The moral hazard will be increased by reason of the strong temptation to unscrupulous persons, who are tired of carrying cotton at a steady expense for interest and warehousing, to sell it to the insurance companies, as the saying is, and thus get their money out of it.

We may be wrong in assuming that the managers of our fire insurance companies are going to restrict their lines of insurance upon cotton under such conditions and are ready to go ahead and assume the entire burden. If, however, there is any doubt about this, or any probability that the plans now being formulated for carrying this great surplus of cotton may be upset, after they go into operation, by the discovery that the fire insurance companies do not deem it wise to assume so great a risk, we think it is the part of patriotism to inform Secretary McAdoo of this at once, so that the necessary readjustments of the general scheme may be made, before it is announced to the public as complete.

SUGGESTED EVOLUTION OF INDUSTRIAL BRANCH INSURANCE

"No one ought to be satisfied with his opinions on any subject of importance, much less ought he to inculcate them on others, unless he can trace their connection with self-evident principles."

TO-DAY it is evident we are living in wonderful times, the the truth of which is manifest on every hand, as witness the triumphs of wireless telegraphy, wireless telephony, and in a hundred other ways; which recalls to my mind a personal incident of many years ago, when, by a four-figure proposal, I was brought into contact with an electrical engineer who gave it as his opinion that the time would surely come when by the aid of a waistcoat pocket telephone apparatus we should be able, when walking along the street, to summon to one's conversation any friend desired within a radius of several miles. And, although by reason of eccentric circumstances, it was concluded that he was a bit of a crank (which necessitated the decline of the proposal) yet, after all, perhaps, he was not so far removed from true genius as then imagined. And it might be held that his ideas were but in embryonic form of the evolutionary progress that might yet be seen.

In the realm of National insurance, too, and in the more general region of life and endowment assurance also, the fact appears well established that farther and farther still we are to travel upon the highway of evolutionary progress; as on every hand there is the deep-seated determination that the triumphs of the past are but to serve as so many incentives, to greater success still, in the volume of new business that is to be written in the immediate and distant future.

With the kindly consent of the editor of the "Commercial World," however, my purpose on this occasion is not to dwell so much upon that aspect of our work, as to propound what, to the vast majority of insurance workers will, I am fain to believe, be regarded as a welcome theory in regard to the conservation and solidification of the business at present in force; as it is a self-evident fact that if the life of the existing business can be prolonged to the period of maturity by endowment or death, more than one-half of the troubles and anxieties of the great army of insurance workers will have ceased to be: and a more than ever brilliant era of financial health and prosperity will have been ushered in. And although reference will necessarily be occasionally made to the ordinary branch assurance, the primary object has special relation to the very much more vulnerable industrial branch of the business, and the setting up of new conditions; or, at least, the variation of some of the least beneficial conditions now prevailing.

The aim in view, therefore, is the practical inviolability of industrial branch policies of several years' duration, with which the interests of so many millions of the population are so intimately interwoven; and, without doubt, I think it will be conceded that if such a desirable evolution can be brought about, incalculable good must be the inevitable and pleasing result.

It may, perhaps, be truthfully said that the primary question in regard to industrial branch assurance has ever been the prevention of lapses; and every one will agree that every practical principle which may conduce to that end is to be heartily welcomed as an inestimable boon; and I am persuaded that by the adoption of the system I have in mind such a boon is realizable. Two or three considerations are, however, first necessary.

Point has ever been made of the alleged profits annually accruing to the companies from lapsed policies; but the fact appears to have been overlooked that if such a statement can be applied to life assurance companies, it must also be held to be equally applicable to friendly societies, concerning whom it was stated at the time of introduction of the National Health Insurance Bill, that no less than 5,000,000 members had lapsed from the several orders; and, as most of them were, assumably, healthy members, the amount of capital gain in one form or other, must, therefore, have been enormous; or, to put it another way, the loss to those members was enormous, for if one party loses it would seem to follow the other party must gain proportionately. And the vast majority would, most probably, have received but very infinitesimal benefits in the past, whilst the future consideration would have been nil, as (so far as I am aware) no monetary consideration was ever guaranteed to any lapsed member of a friendly society.

The question, therefore, that looms most prominently in this connection is: Do lapsed policies mean a profit to the respective companies? Readers of the "Commercial World," however, are fully aware that this question, in one form or another, has been thrashed out over and over again *ad nauseam*. Consequently, without again traversing well-trodden ground, I may, perhaps, here recount a little incident which occurred in my early canvassing days.

A certain client in my agency had resolved to discontinue paying upon five members of his family, in respect of whom infantile policies had been in force for something like ten or twelve years; and to none of which, in those days, was any free policy value attached. But having paid a considerable sum in premiums, for which he, of course, could not see that he had had any return (as he had never experienced the benefit of a claim), he was very wroth at the "loss of his money." Knowing him, however, to have been a good payer, and, for other considerations, it was obviously my duty and interest to make the most strenuous endeavors to save the business, and to try and convince him that lapses were no source of profit—but rather a loss—to the company. In due course I therefore pointed out to him, *inter alia*, that by an eminent actuary's report, that fact had been definitely established; for if every one lapsed, all future income would be lost to the companies, etc., etc., and must consequently see that upon that and other grounds, the company, as well as every insurance worker, was most desirous that he, and others like him, should continue to keep their policies in force. Specifically, however, in his own best interest, it would be most unwise to let the policies drop, as the day would surely come when he would realize the benefit of assurance, etc.

Although somewhat mollified by the conversation, his opinions were unchanged, and with only one idea did he seem to be obsessed. Accordingly, he replied somewhat thus: "Eh, maister, you may hold forth as long as ye like, and talk a dunkey's hind leg off, and go on with yer fotherall; but ye can't make me believe that the cump'ny 'az 'ad my money all these years, and that I shall never seed it agen."

And thus the whole question of lapses might be debated time after time. Paradoxical, therefore, as it may appear, to me it seems that both of the opinions expressed, and hitherto held, in regard to this matter, may be considered correct; and that it is an undoubted fact that both the companies and the policyholders are losers by lapsed policies. Two other facts may also be held to be equally true, viz., that the companies are very earnest and desirous of reducing lapsing to the veriest minimum; and the policyholders are likewise profoundly moved if, through unforeseen circumstances, their policies have to be forfeited after several years' payments have been made, and they would be only too thankful if means

"A paper contributed to the "Commercial World," of London, by a correspondent signing himself "A. A."

could be devised whereby the companies' and their own interests could be mutually served, and catastrophes of this nature could be obviated.

The scheme that I shall presently put forward will, according to my conception, harmonize these combined aims, and tend very largely to render all policies of several years' duration practically non-forfeitable; and, whilst securing a handsome profit to the companies, will also tend to produce such a feeling of pleasure and security to the policyholders as has never hitherto been known, and such as is bound to have the most far-reaching effect upon the status of industrial assurance generally.

The present position for dealing with existing assurances at the lapsing point, as far as I am aware, permits only very limited opportunities of treatment by way of loans, cash surrenders, or free policies, in the event of revival being out of the question. And by one authority we are told "that the main sources of profit to assurance companies are (1) from the rate of interest actually earned being higher than anticipated, (2) from the death-rate among the insured being lower than that provided for by the mortality tables, (3) from the expenses and contingent outlaying being less than the loading provided to meet them, and (4) miscellaneous sources, etc.,"—the latter of which embraces surrenders as well as lapses.

Now, when a person enters upon assurance, there is not the smallest doubt but that the serious purpose and intention are to carry the contract through to maturity, either by endowment or death, as the case may be; and this fact is so evident daily by the thousands of claims paid that the point need not be elaborated here.

The fact, however, remains, that every year there is an altogether formidable total of cash surrenders which, unfortunately, examplifies the truth that man proposes but circumstances disposes, etc. And whilst a good cash surrender may, at times, be looked upon as a god-send, its after-effects are bound to be other than beneficial, and may indeed work an insidiously baneful influence upon the individual who, by surrendering, has experienced a loss, in so far as the actual turnover of money may be calculated. Relatively, also, such a transaction has a demoralizing effect as well.

I am happy to state that from my earliest connection with the great work and inestimable blessings of life assurance, I have, by example and precept, been taught to reprobate the cancellation of policies by cash surrenders, because of the inimical influences thereby generated, and the injury inflicted upon the best interests of all concerned.

In some instances it may have been otherwise, and where the cash surrenders may have meant no pecuniary loss to the insurance representative, but a possible gain in new business fees, the frailty of human nature has possibly triumphed over wider and more altruistic considerations, and the life assurance representative, whose great concern it should have been to have used his moral influence to have warded off the cancellation of the policies by cash surrenders, may have rather aided and abetted them. Be that as it may. Every one will, however, agree that an old policy is of more value than a new assurance (which must necessarily be at an advanced age) can be—view it from whatever standpoint we may. And a worse aspect of the matter is that often and often surrenders have been effected with the possible intention of an early re-assurance, when, alas, that has become an impossibility owing to impaired health, if not sudden death. Consequently the loss has been irreparable and deplorable, alike to the aforetime assured, or in the event of death, to his or her dependents.

Bearing this in mind it has ever seemed to me that the opportunities for cash surrenders—although, from the exigencies of the business, hitherto seemingly necessary owing to the limited manner in which bonuses and policies have been able to be dealt with in cases of emergency—have not made for the permanent good of the companies, the assured, nor the companies' representatives. It would therefore seem that the facilities for the cash surrender of any and all policies should be in the direction of being restricted, rather than being extended.

Most of the above may, however, be held to apply largely to ordinary branch assurances, as cash surrenders in that branch have, perhaps, taken place in greater proportion than in the industrial branch connections of the business, in which free policies have been more frequently resorted to in dealing with policies that, for want of means, could not be revived.

In the industrial branch of the business, however, even where cash surrenders may have been possible, the effects would have been less beneficial still, as the smaller the income the greater the comparative loss; for whilst an ordinary branch policyholder might be willing to look upon the difference between the premiums paid and the amount of cash surrender very much in the same light as a dealer in shares might regard the difference between the purchase price and an enforced sale, the industrial branch policyholder, by reason of his lesser opportunities for rightly appraising such matters and looking at them in their proper perspective, would necessarily view the seeming loss of a sovereign very differently, and such a coin would, to him, represent a very large sum indeed.

The special point of consideration here, however, is that by the cash surrenders, the policies became null and void, and the provision held to be of such paramount importance at the commencement of the contract, has turned out to be a broken reed instead of the strong arm of support so confidently reckoned upon against the day of adversity. Who then can wonder if the feelings of satisfaction and confidence which were employed at the commencement of the contract, should now give place to those of disappointment and profound regret? And notwithstanding the great strides made by life assurance in the past, can any reasonable doubt exist that but for this aspect of the matter, the pace would have been materially enhanced, and the sense of security imparted by the beneficent aid of this form of thrift would have been wider, larger, and infinitely more beneficent still?
